From: Dan/W4NTI
Topic: 1483 Message: 1565

Of course not ALL 50mhz propagation is via 'skip'. Ground wave and Enhanced tropo is quite interesting. Generally much weaker signals and the need of a beam is a requirement.

A reasonably equiped 6m station can work several hundred miles on ground wave. Try early morning work. Propagation seems a bit better then.

I'm up in the early mornings often with my 2 month old infant... sometimes if he's been fed and is still awake, I'll sometimes bring him in the shack, play on the computer and listen to the radio.. I'll have to throw out a CQ every once in a while... :)

Probably the maximum gain measured across the design bandwidth, measured in three dimensions. My point was that the antenna would easily fit in most attics (at 6M), that it acts like a small beam, and that it's cheap and easy to make.

Do that. If you have a beam rotate it around to the various compass points
or population centers in your area. You may be surprised.

I did that on two meters years ago and still have that friend I made back in
62.

Go checkout this interesting antenna. I had a 2 element jobber on 2 meters when I was in Germany. Great little antenna. May be worth looking into for six.

Absolutely. And let's not forget 6m FM as it, too, can provide many enjoyable QSOs and ground wave is the predominant mode of propagation employed on FM. The simplex calling frequency is 52.525 MHz although I belive other channels may also be common on the west coast - can any W6s or W7s offer some insight?

Running FM on 6m is not much different than it is on the higher bands except that your normal working range is greater and mobile flutter (a.k.a. picket fencing) tends to be more gradual and gentle. The higher in frequency you go the more rapid and pronounced the in-and-out choppiness of the signals becomes.

FM work on 6m tends to be local although on Field Day 3-4 years ago I did log about a dozen states on FM simplex from our club's very modest 6m station.

I respectfully submit that this should be "direct wave," not "ground
wave." As I understand propagation, there is very little ground wave at
this frequency.

well larry you can listen thats what most people do there is software
called DXmonitor that you can use to see when people are working what
band
there are beacons between 50.090 and 50.000 and when you hear a CW
beacon you know the band is open to that area
welcome to 6 meters it was open this morning from florida to your part
of the country about 11 am
hope to hear you on the bands soon

1577. Shelby, NC Hamfest

Yahoo group: 6meter (2000 — 2003)
Date: 2002-08-31 20:44:20 UTC
From: Jamie R. Dean - KE4HTM
Topic: 1577 Message: 1577

All in all the hamfest was a blast. Alot of new and used radios to choose from. Little used 6 meter rigs to buy. I saw about 3 Cherokee HT's and 1 GE converted police radios. The HT's were going for about $100, I didn't check on the others.

It rained all day, and since the wife and I were there to sale, we got very wet. The wife more then me because I did get an hours break in the tri-service MARS forum. Even with the rain we made enough that I brought home a brand new ADI AT-201HP handy talkie. The Weather Channel seems to think the rain will ease up tommorrow so we are going back to finish trying to sale what we had left. Worst part is most of the stuff we have is computer related and at Shelby it's hard to give computer stuff away.

Anyways I got the main things I went after, G5RV Antenna, TNC AEA PK-232MBX, ADI AT-201HP, Steering Wheel with pedals for computer (I'm kinda hooked on Nascar Racing 4). The only thing I couldn't find was a pre-made cable to attach my Icom IC-2100H to the PK-232MBX. MFJ tells me I will have to order it.

If any of you get a chance tomorrow, come out and see me and the wife at the fest. You can't miss me. I will be wearing overhauls, a denim ball cap with my callsign and city on it and I will have on a name tag with my ham and MARS call on it.

Hope to see you soon,
73 and Good DXing,

Jamie R. Dean

1580. CW on 50.125 again today...

Yahoo group: 6meter (2000 — 2003)
Date: 2002-09-01 18:50:43 UTC
From: Andy KC2SSB
Topic: 1580 Message: 1580

Heard CW on 50.125 again today. I know people here have said they transmit on 50.125 because lots of people monitor it, but why can't they abide by the voluntary band plan and stay down around 50.000 - 50.100? If all the CW'ers did that, they wouldn't have to transmit on 50.125! I wouldn't think of going down to 50.000 - 50.100 and talk SSB. How would people react if I started talking FM on 50.125 or had local QSO's on 50.110? I bet there'd be some upset people.

The very least these operators could do is QSY off of 50.125 when they've made their contact.

Sorry, just my pet peeve for the day. ;)

Well Andy...my pet peeve is someone going off at the mouth and not knowing the subject matter.

CW is allowed from 50 to 54 mhz. CW ONLY is from 50 to 50.1. If you take time to notice beacons clobber most to all of the 'CW ONLY' segment.

Should you chose to operate FM on 50.125 I would hazard a guess that you wouldn't be able to hear anything. Likely some Slop Bucket station would total your limiter stage and all you would hear is wump wump.

You are mixing apples and oranges. Perhaps if you learn CW you wouldn't feel so left out. I for one call CQ on SSB and CW on 50.125. If you don't care for it I might suggest you listen elsewhere during that short period of time.

Look at it this way Andy...it lets you know there is life out there on six meters.

Dennis,

What possible good would it be to have a 'OO' monitor someone sending CQ on
CW on 50.125? It is not a violation of anything.

And my other pet peeve is people who make assumptions and take things out of context. I never stated that CW wasn't allowed anywhere but 50.000 - 50.100. I recommended that CW operators stay in that special section that has been given to them for exclusive operation. I do know the subject matter, as I have had my license for 1 or 2 days now.

> Should you chose to operate FM on 50.125 I would hazard a guess that you

Huh?

> You are mixing apples and oranges. Perhaps if you learn CW you wouldn't
> feel so left out. I for one call CQ on SSB and CW on 50.125. If

Perhaps I should transmit packet on 50.125 and then you can go out and get a TNC "so you wouldn't feel so left out."

> care for it I might suggest you listen elsewhere during that short period of
> time.

Please don't suggest that I leave the band because of poor operators. CW operators should keep their CW to the special part of the band that has been given to them for exclusive use. Does SSB have it's own portion of the band where ONLY SSB is "allowed"? No. Take advantage of your special portion of the band.

> Look at it this way Andy...it lets you know there is life out there on six
> meters.

For all I know it could be a neighbor. Signal was 5/7 and since I don't know CW, I have no idea where he was, so it really doesn't tell me anything other than someone 5 miles away might be on the band.

We're not talking about violations. We're talking about common courtesy.

Digital modes are not allowed on 50.125.. but CW is allowed EVERYWHERE

That is simply the way it is.

I hear CW every now and again on 50.125... never bothered me..and I do not know CW yet.

Was just using that as an example. My point is still
that CW'ers (is that an appropriate term? ;)) have a
special section just for them. SSB'ers don't, so why
not take advantage of that nice little exclusive
territory?

well either find a piece of software that works thru your sound card and
decode it that way or take the time and effort and LEARN CW likt the
rest of us had to
since they dropped it to 5WPM its no big deal to learn the code any more

We're kind of getting off the topic here, but do not
assume that I have the time to learn CW.

you know what my pet peeve in these news groups is

its when people reply to a post and have the quoted material before there newly added text so you have to scroll thru all the old stuff that you most likely have read before that just to get to what the new text is
cant you just go into settings and click quote after

'OOs' Official Observers are not there to report on 'courtesy' problems. A OO is there to report on VIOLATORS of the Rules and Regulations as decreed by the FCC.

I shall cut you some slack. You do not know of what you speak. Based on your 'newness'.

I read your post up on vhf-uhf. And did not respond. I'll see how it goes and maybe jump in there.

Out of consideration for this group of Jamie's I'll let you off the hook....here. Hi Hi (thats ham for laugh) (dang there are those CW thingies again)

Enjoy ham radio...it really can be fun.

That's not exclusively for SSB, as you were so fond of
pointing out. 50.000 - 50.100 IS exclusively for CW.
(According to the "voluntary" band plan)

Look Andy it is obvious you are trying to start some silly fight here.

So I'll play with you a bit.

No it is NOT ACCORDING TO SOME BAND PLAN.

Are you SURE you took the test?

It is the FCC allocated frequencies.

Perhaps you should actually read the rules before inserting foot in mouth.

I never tried to start a fight. You are the one that give me the initial snippy reply telling me that I don't know what I'm talking about. Just a quote from your first message: "Well Andy...my pet peeve is someone going off at the mouth and not knowing the subject matter." Tell me that isn't snippy and inciting...

I mearly posted a message in order to gather opinions, not to argue. The "some band plan" you refer to is generally accepted by the ham population in general. I am well aware it is not official and I do know "the subject matter".

So, how's life in Anniston since Ft McClellan shut down, anyway?

You are the one that called what I said about six meters a 'band plan'. I responded and told you it was a FCC rule..not a bandplan.

Anniston is doing great. Ft. McClellan has been taken over by the city and we are doing wonderful things with it. More business moving into the area. Great news for the real estate folks. Selling off all those nice, and in some cases, nearly new buildings that the taxpayers of the country built.

Only problem is when Ft. McClellan closed they also took the chemical school with them. That left the area with a problem. You see we have the Anniston Army Depot that has millions of lethal rocket and gas munitions that they are fixing to burn up with a brand new incinerator. Unfortunatly FEMA and the locals havent come to terms YET on how to handle an accident. So no one is prepared. Its a mess actually.

Oh and Solutia, used to be Montsanto, has been cleaning up their PCB mess they made in the southern and Western parts of town.

Other than that...things are fine.

The "bandplan" is what the ARRL (I think) came up with to help organize the ham bands, particularly the VHF/UHF bands. They help decide where operators should use CW, SSB, FM, Packet, etc... They are voluntary and are usually followed by hams and repeater coordinators to help reduce chances of interference. The begining 100khz has been "set aside" for CW use. There is no such area for exclusive SSB use, which was the point to my initial post. I think we've beat this horse beyond death. We obviously will not agree that CW operators should keep to their special are of the band, so we'll call it a draw.

I think I know the answer to this, but figured I'd ask
some people that might have some experience in this
area.

I am buying a Motorola radio that has been converted
to 6m for my car (110 watts out with a remote head). I
have an old 5/8th wave 2m magmount. I understand that
I can use that 2m antenna as a 1/4 wave 6m antenna.
Will this work ok? Will the SWR's be good?

i dont know for sure but i wouldnt think the loading coil of a 5/8th
wave 2 meter would work on 6 the windings and stuff are wrong
if you want a cheap easy 1/4 for 6 go and get a fiberglass or stainless
steel 102 in whip from radio shack and cut it down to the 54 or so
inches you would need for those freqs

A 5/8th 2meter will work on six meters. I used to use one by shorting the coil with a piece of wire. Some of them don't even need that done.

Put some six meter RF in the ant. Check the SWR and go ahead. Trim as needed.

Or if you have access to a state of the art MFJ analizer that will do also. Assuming its reasonably calibrated.

52.525 is the National FM Simplex call frequency. Whoops,,,,,better be careful here.

Says who? Some stupid bandplan? :)

I'm planning on having the guy program 52.525 as well as a few of the area repeaters. Eventually, I'll probably buy the RIB and cable and use my laptop to program it as needed. I'll keep it on when I'm commuting back and forth to work (a 30 mile drive one way) in case I happen to hear anyone calling there.

Andy,
I use a 5/8 wave (on 2 meters) Radio Shack antenna on 6. If I remember rightly, it works out 3/8 wave on 6 meters, but the SWR is fine. I work CW (in the CW subband), SSB (in the SSB subband), PSK31 (in the PSK subband), FM simplex on 52.525, and even some repeaters. I get good SWR all the way around the band. Have worked double hops from OH to CA with no problems. Good luck (don't worry, you won't need much of it, hi).

73,
Jay - AA8QQ

1615. How to make a mountian out of a molehill

Yahoo group: 6meter (2000 — 2003)
Date: 2002-09-02 08:00:43 UTC
From: James Carlin
Topic: 1615 Message: 1615

OK - first let me stipulate that although I learned CW at 5 wpm to get my HF upgrade, I have yet to use it on the air. So I am not a CWer.

So what - people use CW on 50.125. The thing to do is tune up or down 5 khz and operate sideband there. What if the CW operator cant use the bottom of the band because something in their area produces birdie frequencies that wipes out their receive? What if they have an old crystal rig and that is the only frequency they can use? You simply do not know.

So stop making big deals out of non-issues. Use the tuning knob, find a clear frequency as close to 50.125 as possible and operate there.

-- James KF4OUI

Was just using that as an example. My point is still
that CW'ers (is that an appropriate term? ;)) have a
special section just for them. SSB'ers don't, so why
not take advantage of that nice little exclusive
territory?

Hey guys,
If you think 6 meters is bad, you'll LOVE 160. Try it sometime. They run CW and phone together all the time. No one gripes there, it's been like that since way back when.

73,
Jay - AA8QQ

Andy,
The 2m ant will work ok as a 1/4 wave on six. Been there, done that. If you want something a little better, I recommend the Larsen NMOQ-52. Its a full length 1/4 wave whip. Get the spring also. I have had one ffor 10 years and It works great!
73, Don K1DH
Dennis Kaylor wrote:i dont know for sure but i wouldnt think the loading coil of a 5/8th wave 2 meter would work on 6 the windings and stuff are wrong
if you want a cheap easy 1/4 for 6 go and get a fiberglass or stainless
steel 102 in whip from radio shack and cut it down to the 54 or so
inches you would need for those freqs

The "bandplan" is what the ARRL (I think) came up with
to help organize the ham bands, particularly the
VHF/UHF bands. They help decide where operators should
use CW, SSB, FM, Packet, etc... They are voluntary and
are usually followed by hams and repeater coordinators
to help reduce chances of interference. The begining
100khz has been "set aside" for CW use. There is no
such area for exclusive SSB use, which was the point
to my initial post. I think we've beat this horse
beyond death. We obviously will not agree that CW
operators should keep to their special are of the
band, so we'll call it a draw.

hey dan
there is a heck of a price differnce between that larcen and a 102 in
whip thou isnt there i think you can get one from RS for around 20
and 1/4 wave is 1/4 wave isnt it?

hell i am just happy to hear anything on 6 voice CW anything and i have
the software to decode it so it doesnt bother me one way or another
but if you really wanna hear someone complain go to the CW section of 2
meters and call CQ via voice they will have a big FIT...grin
and those EME guys are even worse and they have enough antenna and power
to make there annoyances understood...grin

Hi'
I am a newbee. I live in So. Cal. and wonder how a high pressure system effects 6 meter propagation. Does it shut the band down and keep anything from getting out? We have a high pressure system that is taking temps into the 100s and I haven't heard anything for a few days. I am also calling CQ quite frequently.

Thanks for any information,
Rich KG6HTH

True. money is money.. hi.

Back in the 'good ole days' we used to run Saturn 6 halo's. Horizontal polarized on 6meter mobile. Worked out just fine.

Course we were doing AM back then.

And if you want maximum bang for your buck. If your into 6m ssb. Horizontal on the car is the best still.

The radio shack 5/8 wave resonates at 1/4 wave on six meter so it is possible that the antenna you have would also. The safest way is to throw in a swr bridge and check the match. Odds are you will be all set.

I have a "Generic" (a company called "RF Products") 5/8 wave 2m antenna
that works great as a 1/4 wave on 6m... My 2.5 cents (Inflation ;-))

Hard to tell....he is good here, but not super loud. Probably a 100 watter from what I can tell. He heard me on second call and I am putting out (maybe) 60 watts to a 3 element homebrew.

1639. 6 meter mobile antennas

Yahoo group: 6meter (2000 — 2003)
Date: 2002-09-06 17:06:36 UTC
From: Tom Burns
Topic: 1639 Message: 1639

Recently several people were inquiring about 6 mobile and someone suggested cutting down a Radio Shack $20 whip. For about that price you can acquire a Hustler hf rod which is 54 inches and radiates nicely on 6 meters. It is sold to support hf coils and will even radiate
6 with an hf coil attached. Only recently has Hustler
revealed in its instructions with the rod that it will work on 6, however for a long time prior the rod has been used for 6. It is available as a solid rod and two versions which fold over. Incidentally, I have no connection with Hustler or anyone selling Hustler products....but I have had success with the antenna. Tom, KN9H

1641. 6 meter mobile antennas

Yahoo group: 6meter (2000 — 2003)
Date: 2002-09-06 18:38:37 UTC
From: Dennis Kaylor
Topic: 1639 Message: 1641

okay guys here is a break down of cost on what could be used for 6 meter mobile antennas

Radio Shack P# 21-903 stainless steel 102" whip $14.99

Hustler MO-1 54 in mast $31 MO-3 $23

Hamstick CAT # 9106 $24.95

Hamstick CAT# P100 2 meter 5/8th wave $32.95

so there you go still the RS 102" is still the cheapest
happy hamming

So that means if you cut the 102" whip down it will be even cheaper? Or
do you plan on running it as is????

guess you could cut it to resonate and then use the left overs as a
bookmark or a pointer or something usefull like a 1.2 gig 1/4 wave
antenna..grin

I agree with you totally-- I never could stomach Spam. Even as a child. Actually, I prefer a nice slice of smoked ham, particularly on whole wheat bread (one slice with dijon mustard, the other with Miracle Whip (c)), a slice of fresh (gotta be fresh) tomato, and a thick slice of mild cheddar (or colby). But Spam?? NEVER!!!

Just to keep this on some sort of valid topic---- does anyone have any thoughts or advice regarding using a long-wire (not random) antenna for SSB?

Also would like to hear opinions on use of a rotatable dipole versus a 3 element beam (the rotor I have is very light duty/weight).

Rick/KD4GNK (EM77 in the shadow of the Gold Vault)

Well, according to the ARRL Antenna Handbook (which any amateur wishing to build antennas should buy) an end fed long wire over a couple of wavelengths becomes quite directional off the end of the wire. The 3 ele. beam is the best of your noted options, as it will have some gain and is light enough to be mounted on a TV rotator. The rotatable dipole is just the driven element of a beam....another consideration would be a Z beam (think that is what it is called). It is a pair of driven elements phased to allow directional patterning, giving good gain for just 2 elements. I've a layout somewhere, but it came off the 'Net, so try Cebik's page (www.cebik.com) as a great starting point.

Lots of great info out there....it is actually easy to become an "antenna guru" with some reading, practice and a bit of test gear (I'm not a huge MFJ fan, but I won't sell my MFJ 259B unless it is to buy the 269 antenna analyzer! If you play with antennas, BUY ONE or the AEA models...similar in application, more expensive but smaller....eHam reviews time..RF5 I think is the model).

Date: 2002-09-10 13:05:50 UTC
From: MadDrewski@aol.com
Topic: 1663 Message: 1663

Anyone working the contest this weekend? I'll be on the air in EM96, but not really as a serious contester (i.e., ragchewing is FB). Hope to hear some folks on the air after 1800 UTC on Saturday. I'll either be rover or portable/solar single op, 6m, 2m, and 432 SSB/CW (still rusty on CW, so only a possiblity there) and 222 mhz FM (no SSB/CW rig, sorry...will be monitoring 223.50 simplex). I'll be scanning between 144.180 to .230 on 2 and 50.90 to .200 on 6m, as well as around 432.100 on 70 cm.

Hope to hear you on the air this weekend!

From: Dennis Kaylor
Topic: 1664 Message: 1664

hey guys
i seen a post awhile back where someone referred to someone as an old CBer type so i thought what better antenna setup fot that type of person than a COphased set of 1/4 wave whips for 6 meters
could use the old CB phasing harness and mounts
just cut down your old 102" whips and off you go

just a thought

dan
you need to either move or go off grid so you dont have a power line
noise any more

Dan, did you see the recent post about the FCC letter to the utility about powerline noise? May be worthwhile to print it out and mail it to your utility, along with a written complaint about the noise.

My only QRM problem is my neighbor's TV....cheap thing outputs on 50.110-.115 (colorburst crystal, IIRC) wiping out the DX calling freq. of 50.110. The QRM is S9+20 at the QTH! We're going to check grounds, etc inside the unit (newer RCA chinese build 35" TV). He's also going to cable, so that will help. Hehe...reverse TVI! However, he does not complain when there is a bit of TVI on Ch. 2; if there is a problem he just give me a quick call annd I'll reduce power. Nice to have decent neighbors if you HAVE to live in a neighborhood (XYL requirement).

Probably an arcing transformer and/or connection on a powerpole. Big spark transmitter...if the powerlines are located just right (and ain't they always), you get a big fat signal right into your rig, if you're on the power grid or not. I've tracked one down for a friend......it was about 5 miles distant on a neighboring hilltop. When we got up the hillside you could hear the arc. Took the power company 2 months to fix it, tho.

Andrew,
I should be on here in EN91 on 6 only (6el quad at 35', 100 watts). The mobile is not much good on 2m for contesting. Hope to catch you on 6.

hey jay
how do you like that 6 ele quad for 6 meters?
i currently am running a cubex KingBeeII with is 4 eles on 6 and 8 eles
on 2
just wondering what your performance is like and is it home made or
commercial?

Yeah good idea to keep the peace, if possible.

I have a 32 inch RCA. Its powersupply puts out terrible wide band racket anytime it is plugged in. Perhaps your neighbors is doing something similar?

I've gone 3 years with this mess. Ive had the ARRL and the FCC in on it.
Then the power company started playing games and not doing a thing, but
claiming they were.

I had enough...called the Public Service Commission. That FINALLY got them
going. Now they actually are working on it.

But right now the noise is climbing out of site on six again.

It's made by Lightning Bolt antennas, about 20 miles east of here in Volant, PA. It's on the 24' boom with my 4 el HF quad (also Lightning Bolt) and I get a lot of directivity with it. Beamwidth is about 15 degrees to either side of an S9+ signal before the signal disappears completely. Wish my HF quad would work that good. One problem I have to take care of is putting up a monitoring (omnidirectional) antenna in the attic. The quad is not much good unless it's right on a signal. The other thing is, I work steady afternoons when most of the activity is on 6m. Kinda all dressed up and nowhere to go, eh? Hopefully I'll get on daylight before the 6el quits working. Lightning Bolt is on the web, but I can't think of the addr. If you want it I'll find it for you. Overall I really like it.

thanks jay
i think i will stick with the 4 ele
i would like the added gain but the directive would be a pain i think
i know with 2 meter yagis i always had stacked arrays rather than one
long boom gave me the same gain just not as tight
i think cubex has a 6 ele on an 18 foot boom but its just about $300 and
i am not overly happy with the wire they use they use that stiff shiney
wire that kinks and holds a bend real easy so i modified my a tough and
bought some 14ga stranded antenna wire and used it instead it fed thru
the spreaders so much nicer
well no need getting me the address for lightenbolt i think i can find
it
thanks for the info

Dan, this unit seems to be specific on that freq, thank goodness it is not wideband. As the noise started just after I had helped him unload the TV, I was able to ask him to unplug the TV while I was monitoring on the 6M QRP rig (sans antenna). Noise disappeared when it was unplugged. Apparently that circuit is hot whenever the TV is plugged in...guess it is something like an "instant on" feature. Can't figure a way to defeat it.

Wife brought home a Samsung TV/VCR combo...wiped out 6 AND 2 METERS! As in your case, poorly shielded switcher. Swapped it for a Sony at around $100 more, it is nice and quiet (RF wise). Amazing what we have to put up with and how much QRM is generated by "consumer" equipment. So much for Part 15, eh?

Andrew

If I do the portable/solar, I will be running on 2m. a 5 ele quad at 35' ele on top of a mountain (and a 3 ele 6M beam). Who knows what will happen? 10 watts goes a long way in such cases! <<grin>>

dan
you didnt check the area with a radio before you moved in?
when me and the better half where house hunting i would check with the 2 meter fm rig in the car to see what the noise levels where in the drive way of what ever house we where looking at works okay but we did most of our hunting on the weekend it didnt tell you what was like during the week when factorys where working this place i live in now has some kind of factory or plant accross the street who has some machine that give me an S9 every so often
oh well
happy hamming

Ain't that the truth? Sometimes folks need an 'attitude adjustment'.

Dan....aboveground or belowground utilities? in my old house, had an employee of Duke Power living beside us.....used to hear horror stories of branches touching power lines and causing arcing, esp. in damp weather. Kudzu esp. will cause arcing, and, as you can't kill the stuff, doesn't die when it gets toasty warm due to the arc. Pine trees (popular here in NC) just tend to go up in flames. <<grin>> If it gets worse in humid weather, take a walk down the power line and see if anything is touching nearby. A friend swears that his FT817 is the world's best detector for powerline arcs!

If underground utilities and local interference, most likely a ground (or lack thereof). Our "box", mounted at the corners of 4 lots, had NO ground. After grounding it, powerline interference was cut by quite a bit. Building code does say that they have to be grounded....but we all know how THAT goes.

Andrew

1684. Re: [6 Meter Sked] ARRL Sept. Contest

Yahoo group: 6meter (2000 — 2003)

Its all above ground a and old as crap. They were out here couple days back and DID MANAGE to track and repair some noise to my SE. It helps on six meters. But I still have two other sources going. One weaker to the East and a monster blaster to my north. I am thinking Transformer on this one because I can actually hear a roar when it gets kicking in the wide AM mode.

I have sent the .wav files to a guy in Alabama Power who has been assigned this 'case' since I have been raising so much kane about it.

Also sent same to Mr. Hollingsworth and to the ARRL. ARRL hasn't bothered to respond. I'm really getting more and more disapointed in the league as time goes by. But thats another story.. hi.

Right now it is just past 6pm. The throaty roar has quit. Very strange indeed. I think I am going to mount my modified CB rig for ten meters in the car and stick a whip on it. See what I can find myself.

Dan,
Have a passenger hold your vertical receiving antenna in a horizonal position. The tip of the antenna, a null, will point to the source. Keep in mind VHF and UHF may be reflected enroute to the receiver.

Hmmm....sounds commercial. A ham here (W4EH) works on welding equip., says that some of the TIG welders will even take out BC and FM radio bands from a quarter mile. If it consistantly stops at 6PM, check out commercial sites during the day. I had a Carolina Steel factory near the old house, you could tell when the big arc welders started up.

The "cruise around" deal may work if you can ID a specific freq., otherwise try a directional antenna, even low gain (a foxhunt antenna would work even on 10M for receive....built in attenuation!!) Good luck with finding the sources....I'm still searching for an S9+ source on 15M...my brother was PO'ed when he borrowed the shack the other week the preset meet freq. was just on the edge of that signal. Haven't had any success....but it is quite narrow, so not powerline RF.

Oh, well...good luck with your seach!
Andrew

Good thoughts. I don't know of any commercial stuff that would do this.

Power boys were out here yesterday, again. Found 5 sources of interference. Including not one but TWO extremely loud ones...transformers. Just like I told them three years ago.

Now we will see if the dumbhead crews can fix it. Seems only time anything actually gets fixed is if a supervisor is standing there. I informed my man yesterday that my patience was runout. And I promise them hotel to pay if they don't come out and do the work in a reasonable time.

Along wire such as a vee beam or rhombic or horizontal loop will work ok. If you have a light beam you should be ok wit a tv rotor. ==Don, K1DH

I agree with you totally-- I never could stomach Spam. Even as a child. Actually, I prefer a nice slice of smoked ham, particularly on whole wheat bread (one slice with dijon mustard, the other with Miracle Whip (c)), a slice of fresh (gotta be fresh) tomato, and a thick slice of mild cheddar (or colby). But Spam?? NEVER!!!

Just to keep this on some sort of valid topic---- does anyone have any thoughts or advice regarding using a long-wire (not random) antenna for SSB?

Also would like to hear opinions on use of a rotatable dipole versus a 3 element beam (the rotor I have is very light duty/weight).

Rick/KD4GNK (EM77 in the shadow of the Gold Vault)

Louie, N1QJ,

How much will the 8877 6 meter amp cost?

How much is one of the in stock SB-220 conversions?

How much does it cost to convert an SB-220?

The 6m SB-220 in the picture looks great!

thanks/73

Topic: 1691 Message: 1698

Hi Tom, Thanks, Ray is real happy with the amp, he'll be using it in the contest.

I get $875.00 for an outright SB-220, I get $400.00 to convert yours if you have one.
The 8877 amp I am talking about will be a converted Ameritron amp, It should do 2250 watts output with 100 watts of drive. I would have to get $1800.00 for it. Check out the Alpha price for their 6 meter amp that wont even do that much power including the Command tech amp. I have not yet converted the Ameritron amp because I want to already have a buyer before I eliminate the amp of HF capabilities. I can convert other amps too, but I much prefer the Sb-220's. I suggest you sell your Drake L4B as an HF amp and use that money towards something I can do for you.

If anyone is looking for a small (6' or less) beam,they would be hard pressed to find something better than the KMA 5054 log periodic.It has about the same gain and pattern as a 3 element yagi, but is usable across the entire band with low SWR.This is great for those that like to work all modes and both ends of the band.It's also very ruggedly built and light enough to work with a standard TV rotor.

1700. Contest this weekend.

From: camopainter
Topic: 1704 Message: 1704

Hi all, Im from The northern tip of Maine and dont know many hams in the area, so Im coming here with my question. I have an older midland cb, and was wondering how I would go about converting it to 6 meters. I know there are sites about how to do it, I am having a hard time finding the info I need though. Any help is appreciated.

hey eric
this could be dont with some radios but keep in mind that it would only be working on what ever mode the radio is on such as AM which is what most old CB radios are
why dont you look into buying a used 6 meter rig
i happen to have a MFJ 9406 6 meter SSB/CW rig it would be a good starter rig for you and at $125 plus shipping would be faster and cheaper than modifing that old CB and getting it to do what you want
if your not interested in the radio do a google search for CB to 6 meter mod you should be able to find something
let me know if your interested
thanks

hey guys i am hearing some bursts out of FN or FM area so if you really
like a challenge get out and start yelling
i think tonight is for the big boys with the 7 plus ele yagis and the KW

happy hunting

1708. Advance Notice!

Yahoo group: 6meter (2000 — 2003)
Date: 2002-09-15 08:25:52 UTC
From: James Carlin
Topic: 1708 Message: 1708

Attention 6 meter people! This is an announcement you might be interested in.

A group of hams in Miami, FL (myself included) who have always wanted to do the DXpedition thing decided to stop thinking and just do it. For our location we have chosen Fort Jefferson in the Dry Tortugas. The trip is planned for the first weekend of January, 2003.

Now I know most of you are thinking "where the heck is the Dry Tortugas??". The answer to that is that the Dry Tortugas are a few very small islands about 70 miles WEST of Key West Florida. The only way to get there is by boat or seaplane. Actually the word "island" might be misleading, the chain is more like a series of sandbars that are dry even at high tide. There is no electricity, no running water, not a single luxury, like Gillian's Island only less millionaires and trees - and unfortunately less Gingers and Mary Annes.

OK, so now you are saying "70 miles west of Key West?!?!? That does not tell me a darn thing! No wonder you people in Miami can not even have an election properly if you can not even give proper directions! I live in Kansas and I am not even sure where Key West is!". Just for you, I located the fort on my handheld GPS! How is that for cool?? The coordinates are N 24 37.500
W 083 00.000. Now for the good part, this is grid square EL84(MP). Ill bet not many of you have worked that grid on any band.

The bands we plan to work include HF and as an added bonus to this group - 6 meters! We shall sacrifice a small dog to the 6 meter tiki and ask for favorable propagation. If we are blessed with an opening we shall work 50 mhz for all it is worth. The radio we will use shall be an Icom 706 MKIIG with a G5RV antenna for HF, and for 6 meters a monoband dipole is the best option we have. Power will be supplied by solar cells and lead acid batteries.

I will keep this group updated about the trip. Right now the plan is to go to the Tortugas, but currently the campground is closed. The excuse is that the salt water toilet does not work. The Tortugas are part of the National Parks Department and they can not tell me exactly when the campgrounds will re-open. We have a backup plan (Howell Key in grid EL94) in the event the National Parks service does not get the can fixed.

If you want to see what Loggerhead Key (the location of Fort Jefferson) looks like, I shall include a small jpg now.

Notice how small the land area is and keep this in mind - to build the fort they actually had to make the original key larger! Construction on the fort began in the mid 1800s but was never finished because the invention of the rifled cannon made the fort obsolete.
For more information on the Fort, just do a google search for "Fort Jefferson" and/or "Dry Tortugas". The National Parks Dept webpage also has some information.

Now for the final part of this message and the main reason for the post. Nobody going on the trip has ever done a DXpedition before. We all have experience with operating field stations however. Has anyone else on this group ever been involved with a DXpedition? If so, I will welcome any comments / suggestions. I want to get input from a wide variety of sources so I can fine tune my master plan.

1711. Re: [6 Meter Sked] 6 meter ham radio conversion

Yahoo group: 6meter (2000 — 2003)
Date: 2002-09-15 11:31:35 UTC
From: j diefenbach
Topic: 1705 Message: 1711

Where in Maine are you located? I am (at this very moment) part of a 6am (as in the morning - 6am) 6-meter AM (6am - 6AM) group. This group is located primarily in the So. NH - Eastern MA area.

FYI....there are many 6-meter groups in the Northeast operating at various times on 50.4MHz. If you have access to a receiver try listening at 6am or try listening at 8pm on Wednesday and Saturday evenings. Our particular group meets on Sat. & Sundays.

As for looking for equipment, I just inquired of the group if anyone had a piece of (AM) equipment.
There is a Clegg 99er available from a guy in Holden, MA. This rig needs a power transformer but the individual who owns it has the replacement....just never changed it out.

I personally use an Eico model 730 plate-modulated Heathkit "Seneca", or my Heathkit "Shawnee". Both are operating very well for 40 year-old rigs.

James,
What all modes will you be working. I sure hope you'll take along PSK31. It's a very easy mode to work, even from the field. If you want any info about it, let me know. Us PSKers would like a shot at that grid too.

73 and good luck,
Jay - AA8QQ

Im in Presque Isle, Which is in the Northeast corner. I will be looking for some gear soon, and am really excited to get on the air again. I am learning CW right now and want to get a rig so I can practice Rxing anf TXing code. If there are any hams in the group nearby Id like to hear from them as well. Thanks

1714. [6 Meter Sked] Re: ARRL VHF CONTEST THIS WEEKEND !!

Yahoo group: 6meter (2000 — 2003)
Date: 2002-09-15 17:00:18 UTC
From: Dan
Topic: 1703 Message: 1714

Holy buckets are you lucky!! Ya know them there jackalops are a very dangerous creature, they have been known to attack cars and trucks and wiping them out in a single blow!! I don't think we met, I was more then likely out trying to sneak up on the jackalop, you know there is a good reward for catching one of them!! Boy you saw all 12 cows at one time!! Are you ever lucky!!
There is one thing about ND...NO HOA'S at least here in the western part of the state. Another good point very little IF to cause problems.
As for this weekends contest, I can sum it up in one word...DEAD!!
See us here Nordakotans have a sense of humor also!!

Hi folks,
I've lost the finals in my Icom IC-706mkIIg. Until I can save enough to buy 2 new ones I will be off of 6 Meters and 70cm. I hope that I can do the repair pretty quick since the fall/winter DX season is comming up on 6. Keep the msgs coming about band opening and contacts you are making.

Yep....if it wasn't for the dang winter wx out your a way I probably would have taken up residency. But just can't hack that stuff anymore.

And I worked a few locals on six and thats it. Hear W4NH up in the Carolina's on ground wave right now. I'm in NE Alabama. He is on 50.127 yellin away.

1718. Re: [6 Meter Sked] 6 meter rig broke.

Yahoo group: 6meter (2000 — 2003)
Date: 2002-09-16 00:02:09 UTC
From: Jamie R. Dean - KE4HTM
Topic: 1717 Message: 1718

Well Dan,
I was tuning the G5RV on the 13 MHz MARS freq and the output power spiked to 150 watts then nothing. I lost all transmit power from 6 meters down to 160meters. 2 meters and 70cm are fine, but I'm choosing not to use the rig at all to it is repaired. I called Communications Headquarters in Wilmington, NC they agree it's the finals as do Icom Tech support along with a repairman in GA named Paul a few MARS ops recommended. After going into the radio and checking out the layout I believe I can with no problem replace the finals if I can find them. After searching on the net for several hours I am realizing then I may have to order them direct from Icom and pay their high price. Good news is the wife and I drove the 4+ hour drive to Atlanta to HRO Saturday and I was able to get another HF rig so I can still do MARS nets. I got a Icom IC-718 plus the UT-106 DSP unit. It is Icom's cheap HF rig but after playing with it, it has more features, for HF, then the 706mkIIg and better recieve. The MARS mod was a little harder as you have to remove ribbon cable and the front face of the radio. Also while at HRO I exchanged my ADI AT-201HP which I got at the Shelby, NC hamfest 2 weeks ago (That already broke) for the Icom IC-V8, which is a very nice HT with a very short battery life. (less then 2 hours.)

73 and Good DXing,

From: James Carlin
Topic: 1709 Message: 1719

The trip has to be limited to 10 people at the most due to space limitations on the boat. As it is not we have at least 6 people who want to go, more are interested but do not know if they will be able to go.

I suppose the answer is that the trip is not be invitation only, but due to the nature of the trip circumstances make it semi invitation only. Also who wants to travel all the way to Miami, only to then have to rent a car to drive to Key West then have to buy a boat ticket - all for a weekend trip?

-- James KF4OUI

This is interesting! Keep me (us) posted.
jd, K1TLV
PS: Is this by invitation only?

Rgr that Jamie....let me throw this in tho. It is not normally a matter of simply replacing the output transistors. You need to set the bias to insure proper current distribution. If you do not know, and/or don't have the test gear, I would recommend you send it to a reliable tech to fix it for you. Otherwise you may just end up blowing them up again.

Good deal on the new rig. Great. I am a believer in having backups and spares. I don't have a spare for MARS. But I have three HF setups here. And one six meter. And a 2mSSB/FM/CW and a ten meter ex CB rig. Planning on getting serious in the contesting stuff. No big DX contest wins I'm sure. But I'll probably rattle some cages in the wires only catagories...hi.

1721. Re: [6 Meter Sked] Advance Notice!

Yahoo group: 6meter (2000 — 2003)
Date: 2002-09-16 01:27:27 UTC
From: James Carlin
Topic: 1709 Message: 1721

The mode that will be used the most will be SSB. If 6 meters is really kind to us we might try AM and FM.

I do not know if we will work any digital modes due to the fact that it would require additional equipment and batteries.

-- James KF4OUI

James,
What all modes will you be working. I sure hope you'll take along PSK31.
It's a very easy mode to work, even from the field. If you want any info
about it, let me know. Us PSKers would like a shot at that grid too.

Hi Eric. If the CB is a SSB/AM unit, I might think about cconverting. If it is AM only, give it to a trucker or a well deserving kid in the area. You would be better off finding an older 6 meter ssb/cw rig on the used market. I would start first at ebay and then look around for web sites that list equipment for sale. arrl.org has that and hosstraders.com. It would be a lot better to spend your money on a Heath SB-110, Swan 250C or a Drake TR6. There are newer radios that are solid state that are selling at a reasonable price. Anyway good luck with what you decide. 73, Don K1DH

Thanks for the advice, Im keeping my eyes open right now for an cheap rig to buy. I check ebay for rigs that may be prospectives every day, so soon I hope ill be in luck. I really enjoy the hobby and knew a lot of hams back home in vermont, but now i live in northern maine and am looking to chat it up with some others. theres a lot of flat area around here and one good hiking trail up a large hill Id like to climb and see how far i can QSO with 12 volts and some good luck. Thanks again for the advice!

1725. Beacon list sites

Yahoo group: 6meter (2000 — 2003)
Date: 2002-09-17 10:54:59 UTC
From: Jerry Hemby_W1NRA
Topic: 1725 Message: 1725

For anyone interested in "reading the beacons".
Here are several sites that may help if you don't
already have them. You may want to pass them on to
your local groups, clubs, scouts, SWL'ers, etc

http://www.keele.ac.uk/depts/por/28.htm

http://www.dl8wx.de/baken_kw.htm

http://users.mweb.co.za/z/zs/zs5s/index_buls.html

http://listserv.lehigh.edu/lists/tenten-l/beacons.html

Good luck. Beacon listening is really interesting and
I have probably copied 85 to 100 since I started in
June this year. Several less than half watt! And it is
helping me to copy CW better. Also my beacon has been
heard all over the world.
Check the beacon sites listed at the end of this
message also for info on building your own beacon
station.

1728. cool lightweight dipole antenna

Yahoo group: 6meter (2000 — 2003)
Date: 2002-09-20 05:44:34 UTC
From: James Carlin
Topic: 1728 Message: 1728

I was doing some poking around on the net and I came across this plan for a super lightweight HF dipole antenna. The cool thing about this design, other than being so simple (and cheap) even I could make one, is that the feedline is part of the dipole. With a tuner it supposedly covers 160-10 meters. Im thinking it could also be shortened for 6 meters with a little tinkering.

Here is the URL: http://www.qsl.net/kq6xa/antenna/

Anyway, I would like some feedback from the group on the design. I suppose the million dollar question is - do you think the antenna will handle 100 watts SSB?

As another owner of the MFJ, I will vouch for the design. Rick, K1BQT, the designer, did a great job on the unit. If you do CW, do build the keyer kit. I use my mobile & portable with a 17aH 12v gelcell....works great w/a dipole up at my place in the mountains. Low current draw, good audio and good sensitivity. I actually bought Rick's personal MFJ, he keeps telling me to take good care of it! Neat little analog dial rig...simple and practical. If you need a digital readout, buy the Yaesu FT690 at around $300 and up. If you want to make contacts, get the MFJ.

If the tuner you use will operate at six meters there will be no reason to shorten it.

Looks like a G5RV to me, if your tuner will handle 50MHz, then you will not
need to shorten it.

1740. 2m 5/8 antenna with 6m radio revisited

Yahoo group: 6meter (2000 — 2003)
Date: 2002-09-23 18:19:15 UTC
From: Andy KC2SSB
Topic: 1740 Message: 1740

Well, I finally got my Motorola radio installed in the
car. The radio's been modified to work on the 6m band.
I hooked up my 2m 5/8 magmount to it and get an SWR
around 1.5 - 1.7. Not bad. Seems to work no problem.

1741. Looking For a Rig MFJ-9406

Yahoo group: 6meter (2000 — 2003)
Date: 2002-09-24 09:58:13 UTC
From: Eric Huoppi
Topic: 1741 Message: 1741

Hey all, I was wondering where I could find an MFJ-9406x used or new. I saw one on here the other day and have lost the email and more than likely for the 125 it was going for, its long gone by now. Im looking for a starter rig I can climb to the top of a mountain with and run off 12 volts to have some fun. I live in town with a lot of people around so I cant really play much in town I dont think. I live close to some big hills that I think Id get some distance from. I havent run on 6 meters for a couple years and am very excited to get back on, just need a cheap rig. Thanks ERIC N1QYU

Jamie, you'll get a few spammers, I think that most of us check the subject line & the body text...if it is not about radio, I won't even bother with it (I've got 12 email addresses....think I could sell Spam to Hormel!) I think you're doing a good job, and compliment you on keeping the list going. It takes time, for certain!

Cheers!
Andrew

1742. Anyone use the Diamond HF50CX?

Yahoo group: 6meter (2000 — 2003)
Date: 2002-09-23 21:06:08 UTC
From: Andy KC2SSB
Topic: 1742 Message: 1742

I was wondering if anyone here uses the Diamond HF50CX antenna. I was thinking of buying one. It looks pretty nice - 71" with 3.5db gain (almost 1/2 wave?).. would probably perform a bit better than my 1/4 wave I'm using now.

andy
i dont know anything about diamond antennas other than they are
expensive
when i was looking for my dualband base vertical i was looking at
diamond and comet and comet had the higher gain and the lower price and
lower by nearly $40 too
so if what your looking for is a triband vertical check out the comet
GP15
if all you want is a high gain vertical for 6 check out mosley they have
a 5/8th wave antenna that is a pretty good price

Abe, are you in the position to build one? There was a good plan on the net
for one..I built one, sits in my attic, works FB. Heck, if you want, I'll
build one for a reasonable price!! But, really, they're easy to build.

Let me know and I'll track the design down.

From: Ted Tutterow
Topic: 1743 Message: 1745

Don't forget that some antenna manufacturers play a numbers game with gain values.

When an antenna spec sheet or ad makes a claim on gain, make sure you determine what the gain is in reference to: a unity gain dipole antenna or a unity gain isotropic antenna or a paper clip.

* 0.0 DBd = Unity Gain in reference to a dipole.

* 0.0 DBi = Unity Gain in reference to an isotropic antenna.

Playing the numbers game:

* A Unity Gain antenna with the gain expressed in DBi is +2.18 DB greater than if expressed in DBd.

* A Unity Gain antenna with the gain expressed in DBd is -2.18 DB less than if expressed in DBd

So if an antenna is spec'ed at 3.5 DBi gain it's only 1.32 DB better than a dipole. If someone says an antenna has 3.5 DB gain that sounds better than saying 1.32 DB gain ..... just remember to ask the question: "DB in reference to what?"

A pretty good rule of thumb is to subtract 2.14 DB from the claimed gain and odds are that will be a more realistic figure unless the gain is expressly stated in DBd or DBi.

I've seen some gain figures for mobile halo or square halo antennas expressed by the manufacturers as having "X.XX DB ground gain" ..... haven't quite figured that one out yet, but it sounds good.

Don't mean to come across like a know-it-all ..... just giving benefit of a little bit of experience.

I have found that a base loaded 1/4 wave in the middle of a good roof/ground plane is better that a full 1/4 wave mounted on the side somewhere.....And it also out performs 2meters and UHF by a bunch due to it being lower freq. A well designed J-pole would be good too. I cannot see you running anything much bigger......Get them to fix their repeaters!!!!!

geez for around $30 from radio shack you could get a 102" whip and and a
small spring to it to get it to half wave on 6 which is around 107" for
52.525
i think the 102 whip is about $15 and about $7 for the spring
good luck

That is what I am using, but it's on my trunk. I have it there because I am trying to avoid the Porkipine look on my car. :) The repeaters aren't broken, it's just that the closest repeater has it's antenna on someone's house and the next closest 6m repeater is about 35+ miles away.

You are correct - marketing people are ALWAYS playing games with numbers to make their product look better than someone else's product. Ever see a radio brochure that says "the radio made by our competitor puts out more power and is $50 cheaper than ours"?

Anyway - for all it is worth, every time I have looked at the small print, there is the disclaimer "gain as expressed over an isotropic antenna" or something similar. I don't know if all antenna manufacturers express their antenna gain over DBi, it is always best to bust out with the microscope and read the small print yourself.

And of course, given the choice of an additional 10 feet of elevation or an extra DB in gain, Ill go with the height every time. Something else to keep in mind for base antennas. For mobile antennas you have to trade off height and just do the best you can.

Oh yea that reminds me, I remember reading something about radiation patterns of antennas being dependant on height off the ground. If an antenna is less than 1/2 wave length off the ground the antenna has higher take off angles, which lowers "gain" because you loose the low angle lobes. If this is the case, would it really do that much good to go with anything more than 1/2 or even 1/4 wave on 6 meters from a car? I do not know of any vehicle taller than 1/2 wave on 6 meters that is not a big rig or one of those 3 story mining trucks.

-- James KF4OUI

Don't forget that some antenna manufacturers play a numbers game with gain values.

Better than a loaded whip in the center of the roof is the Larsen NMOQ-52 with the SPRING option mounted in the center of the roof. It is a full length quarter wave antenna. Nuff said. 73 Don K1DH

Are you able to handle about 6 foot of whip? Then at a 5/8 wave you would need to match it to the 50 ohm coax. And you would only see ... maybe 3 db...assuming everything else is equal. I would stick with a 1/4 wave for six meters.

True....but if you are end feeding a full wave antenna the impedeance will be quite high. Thus requiring a tuning network of some sort. Add the loss of it, the requirement to mount it lower on the vehicle...with its added loss.....Then the wierd pattern that would likely develop versus the gain of the ant. I think you would be end up on the negative side. Just my opinion Dennis.

When I was doing 6 meter mobile I used a Halo.

If you can't work a repeater on six meters from 35 miles
away.....someone....you...he...or both have problems.

Groundwave coverage on six is far better than 2m and up,

> You are correct - marketing people are ALWAYS playing games with numbers
to make their product look better than someone else's product. Ever see a
radio brochure that says "the radio made by our competitor puts out more
power and is $50 cheaper than ours"?
>
> Anyway - for all it is worth, every time I have looked at the small
print, there is the disclaimer "gain as expressed over an isotropic antenna"
or something similar. I don't know if all antenna manufacturers express
their antenna gain over DBi, it is always best to bust out with the
microscope and read the small print yourself.
>
> And of course, given the choice of an additional 10 feet of elevation or
an extra DB in gain, Ill go with the height every time. Something else to
keep in mind for base antennas. For mobile antennas you have to trade off
height and just do the best you can.
>
> Oh yea that reminds me, I remember reading something about radiation
patterns of antennas being dependant on height off the ground. If an antenna
is less than 1/2 wave length off the ground the antenna has higher take off
angles, which lowers "gain" because you loose the low angle lobes. If this
is the case, would it really do that much good to go with anything more than
1/2 or even 1/4 wave on 6 meters from a car? I do not know of any vehicle
taller than 1/2 wave on 6 meters that is not a big rig or one of those 3
story mining trucks.

your more than likely right
i would just cut the 102" whip down and make a 1/4 wave whip out of it
myself
the halo is okay for SSB but the homebrewed ones dont hold up to well
and i dont think anyone makes one commerically any more

Dan/W4NTI wrote:

I currently have a 1/4 wave for 6m, but I would like
the added gain of a 5/8 wave antenna, although the
only commercially available antenna that I have found
so far that comes close (3/8 wave at around 71") is
the Diamond HF50CX - a bit expensive at $100.

Sure, if you've got a completly flat, unobscured path. I can work the repeaters from the house with no problem, but from the car, it's a different story. I was trying to get into the repeater from my driveway. My driveway is roughly 40 feet above sea level, in an area that tends to be a bit RF challenged when in a mobile. Once I get up on the Parkway, I'm a bit higher and signals travel a bit better.

Hello,
For a halo check the web site below. I haven't purchased one, however if I was the 6 meter halo on the web site would be the one.

Ah, to have a vehicle on which I can install such an antenna! (Company car...no mods allowed) Just emailed one of the guys the following URL...works great as a mobile antenna if you use drawn AL tubing. 'Course, the bends are tough if you don't have some bending gear. The Cu tubing is great, just clean it and paint it to match the car!!! My (AL) halo is painted light grey/blue to minimise the complaints of having it on my house.

Of course, the halo is horizontally polarized, and is normally used for CW/SSB portions of the band. Mine works well, as does the PAR I have in the attic (just in case someone complains about the unit on the roof).

Squalo plans:

http://www.eham.net/articles/1248?ehamsid=7ee4e2c239021627981f245828720a81

Cheers!
Andrew

Topic: 1765 Message: 1765

If you can not find the manual in .pdf format try ebay. I found a copy of the manual for my Heathkit SB-200 on ebay for $10. If I really wanted to I could print up and bind copies of my copy and sell them on ebay to make up for the initial $10 cost, but so far I have not done so.

PS that reminds me - I have an old Kris 600 SSB amp that has (sadly) been modified for 11 meters. Rumor on the street is that in its former life this amp was for 6 meters. Is this true, and if so how could I re-convert it to 6 meters?? I have no use for a 11 meter amp, but I do not want to sell the thing either.

>
> -- James KF4OUI

James, when I first started tinkering on 6M I was given an old "6M " amp by a friend. As it was actually an 11M amp, it, of course, refused to tune up on six. Instead of trying to "reset" the unit to 6M, I just wound a new tank circuit, added some harmonic suppresion and redesigned it a bit. Look for some of the tube amp schematics for 6M...the sites concentrating on 6M activity will be the places to look (www.6mt.com, SMIRK.org, etc.). Think I used a combination of a Knight T175 (??) and a Lafayette amp design.

Just remember that most sweep tubes (common in such designs) are running close to their max freq. edge at 50 mhz. The possibility of harmonics is increased, esp. if you try to push the design for more power out. Do check output, you don't want a letter from the folks in Gettysburg!

Cheers!
Andrew

Thanks for the info, but I did some investigating today and discovered the kriss 600 used to be a 10 meter amp. It will probably still tune up on 10 meters, and possibly 12 as well. If anything on the amp was changed it was the drive level, I think the thing will work on as little as 2 watt deadkey. Also the power supply for the thing might be non-functional, I simply do not know the full story because I have not tried to use the thing. It is just some equipment I managed to get hold of in order to keep it off the freeband. I also have a huge tube 10 meter radio that is functional on the freeband.

Anyway, after thinking about it I came to the conclusion that I really do not need a high power amp for 6 meters. I am happy with the 100 watts the Icom 706 already puts out. Yea, 500+ watts would be fun but really now - is it necessary? I would rather spend money on a better antenna than more power.

QSL! I personally have worked several countries and over 100 grids with 10 watts and a Yagi up 30' on a pushup pole. The Icom is a great rig...you'll do well. As for the amp, check the tubes...if they're good, you can probably sell them to someone w/a Yaesu or Swan (think they're the ones that used sweep tube finals) and junquebox the rest. CB Amps? RIP! (rendered into parts)

Cheers!
Andrew

1769. 6 meter radio still avaible

For Sale MFJ 9406X heres what MFJ says about it

Work exciting 6 Meter DX from all over the world on ham radio's "magic band"!
It's an adventure every time you turn on your MFJ-9406 six meter SSB transceiver.
Distant stations come rolling in loud and clear with crystal clean armchair copy. You'll have fun exploring exotic 50 MHz band openings -- Tropo, Sporadic E, F2, TE, Aurora, Meteor Scatter, and more.
Ragchew with locals, hunt down new grid squares from far-away places from home, car or mountain top.
Here's what you get...
Full SSB/CW coverage: 50.0 - 50.3 MHz covers SSB, CW, propagation beacons.
Potent signal: 10 Watts PEP output. MFJ's exclusive ConstantCurrent syllabic speech processing gives you up to 6 dB more punch to cut thru noise, fading, QRM.
Hot receiver: Crystal-mixed single conversion superhet with low-noise preamp digs deep into the noise to capture weak signals. If a station is there, you'll hear it!
Easy to operate: No microprocessor mumbo jumbo ... just turn it on and tune in.
Low power drain: Mountain top all day on lightweight NiCad or operate from home on 110 VAC with MFJ-4110, $49.95.
Great selectivity: Sharp HF proven crystal ladder filter reduces QRM & passband noise.
TVI protection: 7 element low pass filter knocks out TVI -- operate when you want to!
Real S0Meter: Give meaningful signal reports, accurately steer your beam, monitor speech processing.
Smooth tuning: Vernier reduction drive makes tuning precise and easy.
External amplifier: Jack provides a key line for activating 6 Meter amplifiers.
Built to last: Premium PC board, quality components, brushed-aluminum panel and tough vinyl clad case gives years of service.
Fully guaranteed: MFJ's exclusive one year No Matter What warranty. We will repair or replace your MFJ-9406 for 1 full year. Price New $269.95

i am asking $125 plus shipping
this comes with the Mic/Manual/Box
if interested please email direct
thanks

From: Dan/W4NTI
Topic: 1772 Message: 1772

It is a all tube type rig. Uses a pair of 6146s in the final and if
everything is working well will put out about 90 watts or so.

Being a tube type it is a peak the grid and dip the plate sort of a deal.
So you will probably want a wattmeter/swr bridge to keep you and it happy.

It is quite similar to the SB 101 series of Heathkit HF equipment of the 60s
and 70s.

Hope that helps.

Dan/W4NTI

1777. Re: 2m 5/8 antenna with 6m radio revisited

Yahoo group: 6meter (2000 — 2003)
Date: 2002-09-29 18:10:02 UTC
From: houcwb
Topic: 1740 Message: 1777

I was scanning the list archives (just joined) and saw this msg.
ANY 5/8wave antenna for 2mtrs that is SERIES fed (not shunt tuned
with a DC shorted coil) will work on 6m...the coil makes the
antenna 3/4wave electrically on 2mtrs so it gives a good 50ohm
match....on 6, this makes it a 1/4wave electrical length! I run
a NMO-150 on my cowl of my Blazer....did not cut the whip..
it works the entire 6mtr band with below 2:1 SWR!! (I use it
primarily on FM with a Midland Syntech II 320channel commercial
radio programmed for every 1 and 1.7Mhz rptr split and all simplex
channels..plus I do have some low channels in the 50 and 48 Mhz
range in it as well :)

Chris

Topic: 142 Message: 1778

Crosslinking from a 6mtr rptr MUST be done only within the repeater subbands on the other bands...the links mentioned below are ILLEGAL under Part 97 as they both fall outside the rptr subbands on 2mtrs (144.5-145.5 and 146-148 MHz)...someone better remind them about that and have them reread Part 97....its NOT a free for all!

As long as the xband freq is within the REPEATER range on the band in question, there is nothing stopping you from xbanding from 6 to another band...NOW if the CONTROLLING freq is say rptr above 222 Mhz, then a 6mtr remote base that is freq agile may be used... PROVIDED the control op/user of the 222-up rptr is licensed for use on 6mtrs (IE NO NOVICES allowed to do this!)

The system on Air Bellows gap started in Boone, NC in the early 1990's. 144.20 was on Rich Mtn along with the 53.050 repeater. 145.520 was in Taylorsville. around 1996 the repeater was moved to Hickory along with 144.420 due to site problems with the local cable company in Boone. About a year later the repeater was move to Grandfather Mtn. (not sure why moved from there.) And just a little over a year ago the 53.050 along with the 144.420 was moved to Air Belows Gap it's hope to be perminate home. The simplex linking system on this repeater has work well in western NC for over 10 years now. There has never been one problem due to the 2 meter link on the machine. Any problems that have occurred have been due to interference on the 6 meter side. Dan the repeater owner has done a heck of a job maintaining the links. Through this system I found a love for 6 meters, when in 1996 while talking to a friend on the 144.420 side a 6 meter station in Thunder Bay ON, Canada came in and talked with us. I have been a six meter junkie since. His system has done the same for allot of hams in this area. Dam also run a 70cm repeater with a simplex link in the 147's not sure the freqs. off the type of my head. Anyways I hope this gives some more insight into the system and it's use here in western NC.

Jamie,
regardless of its use and whether it has caused interference OR not,
there is no way to legally justify it...under the Part 97 rules,
it is ILLEGAL to have rptr IOs outside 144.5-145.5 in the 2mtr
band (and has been ever since the rptr rules have been in effect
since the 1970s and even before!)...a 220 or UHF rptr CAN legally
operate a remote base there as long as they are not full time and are
used as a remotely controlled station as defined under Part 97,
but as a full time rptr IO, nope....not even off a 220 or 440 rptr.

BUT a 6mtr rptr may ONLY crossband to other REPEATER freqs..
this means the only freqs legally allowed are within the ranges of:
29.5-29.7, 51-54, 144.5-145.5, 146-148 and 222.15 and above
(excluding 431-433 and 435-438 MHz).

there was a 6m AM rptr up north that was using a 51 Mhz output
but had an input below 51 MHz....though it did not cause interference,
it was illegal...Riley recently forced that repeater to change freqs
or be removed from the air.

The rules ARE the rules...and this is ham radio, not CB (at least
YET!)

When I posted my msg it was not to cause a debate on the FCC rules. It was to give information on the system here in our area. I'm not sure the 144.420 and 145.520 would count as a crossband repeater. These 2 freqs. have no IDers and they are only active when there in an actual person talking on the 53.050 machine. If you where to go to 144.420 or 145.520 and talk you would not hear anything unless the six meter repeater was active. The 2 meter freqs are simplex so unless a person is close to you on one of the freqs and you talked they would never know you where there. I'm not sure if he is doing this under the guides that it is a remote base or how he has got away with it for so many years. But I was told that he coordinated the setup with SERA (Southeastern Repeater Association) This is all I can tell you on the subject...

From: Kurt Tuttle
Topic: 1779 Message: 1783

Wow, Chris came down a little hard don't you think. He was just explaining how he got into 6 meters, but just to throw a monkey wrench into this, I remember working thru a 2 meter repeater in Boston Area, from 20 meter SSB from Germany while stationed over there and this was in the mid/late 70's and it was legal, even if the operator on 2 meters was only a Tech, because it had a live control operator (Extra Class) that was watching the system. So here was a case where it went from a designated 2 meter repeater freq to a non-repeater freq and was still legal.

--- In 6meter@y..., "Jamie R. Dean - KE4HTM" <jrd@j...> wrote:
> The system on Air Bellows gap started in Boone, NC in the early
1990's. 144.20 was on Rich Mtn along with the 53.050 repeater.
145.520
was in Taylorsville.
<SNIP>
The simplex linking system on this repeater has
work well in western NC for over 10 years now. There has never been
one problem due to the 2 meter link on the machine. Any problems that
have occurred have been due to interference on the 6 meter side. Dan
the repeater owner has done a heck of a job maintaining the links.
Through this system I found a love for 6 meters, when in 1996 while
talking to a friend on the 144.420 side a 6 meter station in Thunder
Bay ON, Canada came in and talked with us. I have been a six meter
<SNIP>
Anyways I hope this gives some more insight into the system and it's
use here in western NC.
>
> 73 and Good DXing,
> --
> Jamie R. Dean

Jamie,
regardless of its use and whether it has caused interference OR not,
there is no way to legally justify it...under the Part 97 rules,
it is ILLEGAL to have rptr IOs outside 144.5-145.5 in the 2mtr
band (and has been ever since the rptr rules have been in effect
since the 1970s and even before!)...a 220 or UHF rptr CAN legally
operate a remote base there as long as they are not full time and are
used as a remotely controlled station as defined under Part 97,

but as a full time rptr IO, nope....not even off a 220 or 440 rptr.

BUT a 6mtr rptr may ONLY crossband to other REPEATER freqs..
this means the only freqs legally allowed are within the ranges of:
29.5-29.7, 51-54, 144.5-145.5, 146-148 and 222.15 and above
(excluding 431-433 and 435-438 MHz).

there was a 6m AM rptr up north that was using a 51 Mhz output
but had an input below 51 MHz....though it did not cause interference,
it was illegal...Riley recently forced that repeater to change freqs
or be removed from the air.

The rules ARE the rules...and this is ham radio, not CB (at least
YET!)

Whoa! What was described is not a repeater but a replexer. A replexer is NOT a repeater. The repeater being described is a conventional machine with a 6m input and a 6m output - it was not a crossband repeater with input and output on different bands. A replexer uses the SAME frequency for both input and output (think of it as a simplex repeater hanging off of a "real" repeater). This is not unlike what ATV repeaters use to allow non-ATV hams to participate in the audio portion of a television QSO: The repeater's video and audio are on 70cm or higher and an additional audio link is often available on 2m.

Here in the mid-atlantic area the bandplan put forth by T-MARC, the local repeater coordinating body, even reserves 147.435-147.585 for replexer use as does at least one of the adjacent coordinators (SERA). They most definitely are legal.

i have had both the 3 and the 5 ele yagis from cushcraft and they are a good low cost antenna and cushcraft supports parts for them pretty well if i had to buy a new antenna i would go with M2 because they are a better performer but since you already have it clean it up and put it up and enjoy it
happy hamming

Abe, are you in the position to build one? There was a good plan on the net
for one..I built one, sits in my attic, works FB. Heck, if you want, I'll
build one for a reasonable price!! But, really, they're easy to build.

Let me know and I'll track the design down.

> Whoa! What was described is not a repeater but a replexer. A
replexer is
There is no such word in Part 97...it is either a rptr, aux link
or remotely control base...given that is AUTOMATICALLY retransmits
from a freq (say 144.42) to another (53.xx), it is a rptr by
definition....pure and simple...read 97.3 if you need to learn
the terms...

> NOT a repeater. The repeater being described is a conventional
machine with

both
> input and output (think of it as a simplex repeater hanging off of a
"real"

NO, this is a 6mtr rptr with SIMPLEX IOs on 2mtrs....crossband
simplex but still considered a crossband RPTR (again, please
read the definitions in 97.3...Your interpretation of such
is NOT in Part 97, does not exist in the FCC's eyes and is only
a way to make legimate the operation of such...but if a
system looks like a rptr, talks like a rptr, and quacks like
a rptr, its a rptr...unless it can qualify as an AUX link (nope,
that can only operate above 222.15 Mhz) or a space Sat station
retransmitting earth signals..(nope, it aint in orbit...and
6mtrs is not allowed in the Space Satellite service..

> repeater). This is not unlike what ATV repeaters use to allow
non-ATV hams
> to participate in the audio portion of a television QSO: The
repeater's
> video and audio are on 70cm or higher and an additional audio link
is often
> available on 2m.

That is highly gray area under Part 97 rules..BTW I have been an
ATVer for 20+ years as well as rptr owner/trustee about the same
amount of time...the only way they legally get away with it IS
the 2mtr input can be classified (CAN but should not) as a
remotely controlled input station on 2mtrs to the UHF rptr WHICH can
legally have remotely controlled station operations on ANY freq below
222.15 Mhz...(we commonly call them remote bases...but that is not
their legal name..it is a Remotely Controlled station...yet the
only thing that qualifies under the above noted operation is a

Repeater...nothing else in Part 97 matches it, btw the use of 144.34 MHz btw is the gray area for ATVers....if they used a 146-148 simplex channel, there would be NOTHING illegal about it as that can use used as a secondary input to the ATV rptr audio channel...but if the 144.34 audio channel AUTO keys the ATV audio xmtr, it IS illegal as that is a rptr...and is not allowed below 144.5 Mhz.)

BUT the scenario here is a 6mtr rptr....that cannot operate as an AUX station NOR can it be legally crosslinked to ANYTHING else but a RPTR freq listed in Part 97 (yes Virgina, Part 97 does restrict rptrs to certain subbands...they are listed)

> Here in the mid-atlantic area the bandplan put forth by T-MARC, the local
> repeater coordinating body, even reserves 147.435-147.585 for replexer use
> as does at least one of the adjacent coordinators (SERA). They most
> definitely are legal.

Nope...they are not....again, a "replexer" does not exist in the FCC eyes....or Part 97. It is a rptr with simplex IOs...and those simplex IOs are illegal...NOW if they were within the 2mtr RPTR subband on simplex channels like 146.46 or 147.48, they WOULD be legal....but the channels chosen are not.
Please refer to Part 97 for any legal definitions.

> 73,
> Abe N3BBF

Sorry, but this is not an interpretation...it is black and white in Part 97 and I am appalled at the number of people who try to bend the rules to match their operations...(shades of 27 MHz...whats a 100 watt linear gonna hurt?)
No folks, the rules are the rules...I have been a rptr owner through some of the strictest times of rptr operation (Prose Walker and Docket 20282 of the 1970s where WR calls were mandated and NO crossbanding was allowed, 10mtr was not allowed rptrs except in hardship cases ...you had to PROVE to the FCC you needed one!... 6mtr FM was NOT allowed below 52.5 MHz unless you ran +/- 2 kHz dev max!.....yep, been there, saw all that....the current rules are easier to deal with...yet people are always trying to bend them more.....but try as they may, the black and white print stands out...If you dont like them, ask the FCC to change them...

I'll be sure to check with the guys at SERA about this btw...BUT last I saw their bandplan it showed NOTHING listed as replexer.. crossband rptrs, yes. We have that in Texas...but nothing named "replexers".

Chris
WB5ITT

(List manager of Coordinator and NFCC...where the nation's amateur freq coordinators meet)

Sorry to take up the list time with this...but ignorance of the rules is no excuse...and as a rptr turstee for 25+ years, it upsets me when people misquote the rules.

still legal.

Nope it wasnt legal, especially then...using 2mtrs as a control link to control a HF radio is not allowed...and I know it wasnt then..
such operation requires AUX control links..only allowed on 222.15 and above...I refer you to the ARRL Rule Book and its section on remote base operation for more detail.
NOW it could have been a UHF or 220 rptr...THAT was legal! because the 220 or UHF box was an AUX station and the HF rig was a remotely controlled station (all covered in Part 97)...

BUT from 2mtrs?....nope...wasnt then...& isn't now..

THE ONLY way that could be legal is a user ON the 2mtr rptr holds his 2mtr mic to his 20mtr HF spkr...and vice versa..
THAT is legal because it is MANUAL retransmission...and it goes through a legal control op's home station...but to link it full time at the 2m rptr site?? Nope....that NEVER has been legal under part 97.

Sorry...

1793. Need help Motorola Maratrac

Yahoo group: 6meter (2000 — 2003)
Date: 2002-10-03 21:15:10 UTC
From: Andy KC2SSB
Topic: 1793 Message: 1793

I recently installed a Motorola Maratrac radio in my car with a 2 meter 5/8 wave magmount (acting as a 1/4 wave on 6 meters). The radio has been modified for the amateur radio 6 meter band. There are 2 "area" repeaters for 6m. I have noticed that when I am in areas that should definately be well within range, I am having trouble getting into the repeaters. I can get into the repeaters for some of the time. They sound like they have a good signal strength, and I've noticed that other operators that are farther are making it in no problem. The meter I hooked up to it shows a full 100 watts out and the SWR's on the antenna aren't bad (average around a 1.6 - 1.8).

The power leads are wired directly to the battery and the main part of the radio is in my trunk. There are 2 other radios on the same wire (they all meet inside the car, then 2 lines lead out of the car to the engine). Neither radio is turned on when I am having the problem. The orange wire running from the head of the radio connects with the positive wire to the battery.

Can anyone think of anything I might be doing wrong? Is there something about wiring up the Maratrac I should know? I DID notice today that the metal clip on the back of the microphone was getting warm while I was talking, so that might be an indication, but this is the first time I experienced that.

I am thinking of wiring the radio to the battery seperately from the other radios to see if that solves any problems. Thanks in advance for any help!

sounds to me like he is suffering from typical 1/4 wave picket fencing
just like you get on 2 meters when your on the fringe of the repeater
and using a low gain antenna
but he doesnt want to hear that and he is also probably only using 14ga
wire running to the back of the car rather than the 10ga he should be
using

Subject: [6 Meter Sked] Need help Motorola Maratrac

I recently installed a Motorola Maratrac radio in my car with a 2 meter 5/8 wave magmount (acting as a 1/4 wave on 6 meters). The radio has been modified for the amateur radio 6 meter band. There are 2 "area" repeaters for 6m. I have noticed that when I am in areas that should definately be well within range, I am having trouble getting into the repeaters. I can get into the repeaters for some of the time. They sound like they have a good signal strength, and I've noticed that other operators that are farther are making it in no problem. The meter I hooked up to it shows a full 100 watts out and the SWR's on the antenna aren't bad (average around a 1.6 - 1.8).

The power leads are wired directly to the battery and the main part of the radio is in my trunk. There are 2 other radios on the same wire (they all meet inside the car, then 2 lines lead out of the car to the engine). Neither radio is turned on when I am having the problem. The orange wire running from the head of the radio connects with the positive wire to the battery.

Can anyone think of anything I might be doing wrong? Is there something about wiring up the Maratrac I should know? I DID notice today that the metal clip on the back of the microphone was getting warm while I was talking, so that might be an indication, but this is the first time I experienced that.

I am thinking of wiring the radio to the battery seperately from the other radios to see if that solves any problems. Thanks in advance for any help!

SWR is only part of the story. Someone pointed it out to me this way - a dummy load will give you 1:1 SWR but makes a lousy antenna.

I do not run 6 meters in my vehicle, but others who have told me something about tuning your low band antenna using a field strength meter along with SWR. This way you can tell if the antenna is radiating or just heating up.

-- James KF4OUI

I recently installed a Motorola Maratrac radio in my car with a 2 meter 5/8 wave magmount (acting as a 1/4 wave on 6 meters). The radio has been modified for the amateur radio 6 meter band. Yahoo group: 6meter (2000 — 2003)
Date: 2002-10-04 01:19:47 UTC
From: n4km@aol.com
Topic: 1794 Message: 1800

Andy,
I would have someone check the radio with a service monitor or frequency counter to make sure the transmit is on frequency. Also, if the repeaters require a PL tone, that should be checked to make sure that it is on frequency also. If a local ham does not have the equipment you may need to drop by the local comercial radio shop and pay them to check it. That would be where I would start.
73 es good luck,
Kevin N4KM

1803. Re: [6 Meter Sked] Need help Motorola Maratrac

Yahoo group: 6meter (2000 — 2003)
Date: 2002-10-04 03:18:58 UTC
From: Don Huntington
Topic: 1793 Message: 1803

Hi Andy,
I read all the stuff the guys wrote . What is happening is that the noise blanker is being overloaded by a nearby signal on another freq. Take it back to the person who programmed it and have him either program a button to turn the NB off or disable it internally. I know there is a spot in the chassis to do this. I have the same problem with my Syntor X 9000. I programed a button to turn the extender on and off.
I hope this helps. 73, Don K1DH

Andy KC2SSB wrote:I recently installed a Motorola Maratrac radio in my car with a 2 meter 5/8 wave magmount (acting as a 1/4 wave on 6 meters). The radio has been modified for the amateur radio 6 meter band. There are 2 "area" repeaters for 6m. I have noticed that when I am in areas that should definately be well within range, I am having trouble getting into the repeaters. I can get into the repeaters for some of the time. They sound like they have a good signal strength, and I've noticed that other operators that are farther are making it in no problem. The meter I hooked up to it shows a full 100 watts out and the SWR's on the antenna aren't bad (average around a 1.6 - 1.8).

The power leads are wired directly to the battery and the main part of the radio is in my trunk. There are 2 other radios on the same wire (they all meet inside the car, then 2 lines lead out of the car to the engine). Neither radio is turned on when I am having the problem. The orange wire running from the head of the radio connects with the positive wire to the battery.

Can anyone think of anything I might be doing wrong? Is there something about wiring up the Maratrac I should know? I DID notice today that the metal clip on the back of the microphone was getting warm while I was talking, so that might be an indication, but this is the first time I experienced that.

I am thinking of wiring the radio to the battery seperately from the other radios to see if that solves any problems. Thanks in advance for any help!

10 ga through the whole car. The area that I am having trouble in isn't what should be the fringe area. I'd love to use something better than a 1/4 wave on 6m, but a 5/8 would be like 10'. Diamond makes a 3/8 wave at 70" or so, but they want $100, and that doesn't even include the mount, so I guess I'm stuck with a 1/4 wave.

As I stated in my message, mobile operators that are further away are getting in and the repeater sounds nice and strong. Of course this radio has no meter, so I can't say for sure what the signal strength is, but it seems strong.

The antenna is in the center of my roof, not gonna get
any better than that on a car for a ground... the
warmth on the mike was first experinced today.. it
might have been just warm hands and not RF. I haven't
experienced that before, so it might have been a
fluke. I'll have to wait and do some more testing.

Lakeview makes a 6 meter hamstick for $25 (www.hamstick.com) . You can also get a 102 inch whip for cheap and cut it down to length. You do not have to spend $100 for a monoband mobile antenna unless you really want to.

-- KF4OUI

10 ga through the whole car. The area that I am having
trouble in isn't what should be the fringe area. I'd
love to use something better than a 1/4 wave on 6m,
but a 5/8 would be like 10'. Diamond makes a 3/8 wave
at 70" or so, but they want $100, and that doesn't
even include the mount, so I guess I'm stuck with a
1/4 wave.

I'm not quite sure I follow. How is a noise blanker
problem related to my inability to get into a repeater
that should be close enough to get into? The receive
signal is fine, it's transmit that I'm having a
problem with - either because of my antenna or because
of something with the Maratrac that I am not aware of.

Thanks for the info! I may try one of these antennas.
I'm sure it's gotta be better than my 1/4 wave I'm
using now.

NO! The noise blanker in a Maxtrac/Maratrac is just an impulse type blanker! And VERY EFFECTIVE TOO!!. And you can turn it off by holding the MON key till the second set of beeps (booop, booop, boop), or again to get (Beep,beep beep)-(ON). Powers up "ON".
And ANDY, Listen up,,,,, GROUND a good 1/4 wave ant in the center of your roof!!! ie be a man an punch a 3/4 NMO hole in it and put a real COMERCIAL antenna there. You do NOT need a "gainer" on 6m, just a base loaded or 1/4 wave will work fine!!! A gain ant is only as good as your location,,,,,if you are in a canyon, a 1/4 wave will be BETTER than a gain ant.....draw a pic and you will see.......Keith WE6R

No...not on a mobile will you get any better than a 1/4 on lowband
VHF/6mtr....a 5/8wl would be better but as you stated the length
would be too long....a 102 in whip will be HIGH impedance,
HIGH SWR and poor radiation efficiency unless matched...
The 1/4wave base loaded roof mount is just fine....
Keep what you have...must be location..

From: cboone@earthlink.net
Topic: 1794 Message: 1814

Depends on the antenna! Using a lowband ON GLASS dummy load will heat up the glass....but radiate little....some short mobile antennas (like the ones sold for CB that are maybe ONE ft in height) are nothing more than poorly radiating dummy loads as well...Field strength meters are useful IF you can tune the antenna....but a true 1/4wave antenna should be cut to length and be left alone (its input Z will be 36-40 ohms and NOT a true 1:1 SWR with a fixed 50ohm wideband output stage now found in commercial lowband rigs...) trimming the antenna to match the radio only take the antenna away from 1/4wave length and can upset the radiation pattern..(not too much but it is possible)

NOW saying that, back in the 80s, while employed at a power utility in the telecommuications dept, we ran actual field strength plots on various low band antennas (we were on 48 MHz) on vans, trucks, etc and various mounts...

a true quarter wave series fed was mounted in the roof of a van... and this was used as a reference vehicle....the test plot consisted of a open pasture at one of our power plants with nothing around for 1000ft or more (so little reflections)....the readings were done with a IFR 1200S on another van with a 1/4wave on the roof...(I was the one driving the van)....the center of the test range was where we parked the vehicle in question and one guy keyed the radio for 10 secs as I drove around it at 500ft space taking reading on the IFR (using double shielded cable and attentuator pad ahead of the IFR...

The magmount Signals (CushCraft commercial line) was excellent on the plot...about as good as the 1/4wl...now the Signals lowband antenna used a whip as long as the Larsen NMO150 on VHF (49-51in). The LARSEN NMO-47 on the other hand was down by 1.5-2db in signal! and they were a PAIN to tune...especially on truck cabs!
Note the Signals we tested were NMO mounts and we ran both on the roof permanent mount test as well as the mag mounts..

The On Glass POS was 10-20DB lower in signal strength!!! In fact the test vehicle coupler inside fell OFF during testing...(100watt GE MSTR IIs were the test radio in all test)....the glass was extremely warm...and no there was no metallic flakes, etc in the glass..

We also tested various mounting areas on trucks with ladder racks, etc (being a power company, we sometimes had little area to mount and the garage folks were trying to keep us from drilling holes in the roofs....hence the tests to prove to our supervisor what was the best place to put an antenna...also SAFETY was a factor.. the guys in the field HAD to talk to the dispatcher...if communications was not reliable, there could be some danger in switching, etc..

(230KV makes one HELL of a BANG and fire :)

One mount tried was a small pad next to a flashing beacon mounted atop the ladder rack on the right side of the box bed of the truck.. this has a terrible pattern with front to back varying 10-25 db in strength...and the signal favoring the majority of the ground plane direction...

We did weeks of testing and I was quite happy with the way it came out (btw both of us running the test were hams as well)...

We eventually won our case and the ON GLASS Avantis were thrown away ($800 worth of trash!)....we went back to running Signal 1/4wave base loaded (actually we were buying the 150 MHz models because they were cheaper but they were the same built and style as their low band models...hmmmmm :)

Again, the magmount did work ok with it centered on the roof...off to one side, the radiation pattern was distorted as expected...but overall signal eff was good! The Larsens on lowband (NMO47, etc) were POOR performers....I would recommend use of a magmount with a NMO150 OR the Signal equiv.....but only on the roof and in the center.....otherwise, drilling and using a NMO mount is the best way to go unless you want to put a big ballmount on the roof (and who does?)....even on the rear 1/4 panel the ball mount did ok but the baseloaded roof mount was best overall....

Now as to the question on the Maratracs, what size power cable did you use? If you do not have a wiring manual or never wired one up before, I would highly recommend you get an install manual on that radio and follow it!!
Try setting the power lower to 60watts or so....(you WONT notice the difference on the air)...and see if the cable, etc doesnt get as hot...(thats quite a bit less current drawn...Ive dropped power from 100watts to 45 with NOONE able to tell the difference 99% of the time)

Andy and Dan,
I'm not sure what happened between you two on the newsgroups. I don't really care. But please keep it there or in private e-mails. This groups is for helping to make 6 meter operation easier and more fun. No one wants to read flame mail in there inbox. So for now I ask that all of you keep that kind of msg off the list.

thanks for your understanding,

Ahhh yes it does..NOT directly....
BUT have you ever used a capacitor? Think about it....

I don't have the digital head for my Maratrac. I am
using the 8 channel head, so I can not do that.

Thanks for the advice, but cutting a hole in my roof
is not an option. Currently the antenna sits on the
center of my roof on a magmount and that's where it's
gotta stay, although I would prefer to have it on the
trunk for cosmetic reasons. Are you saying that a 6m
hamstick would not be a good antenna to use? I still
don't think it has to do with my location, because the
times I had trouble getting into 1 repeater in
particular, I should have been able to get into it
with no problem, especially with the quality of
receive I was getting from the repeater.

Andy....coming to bat late here....I may be reiterating several items already propounded by others.

A) Make sure rig and control head are both grounded physically to chassis, not just via the power connection.

B) Make sure you've got good coax going up to the mag mount....i.e., no pinches or other problems.....also, my old 6M magmount vert lost the coax shield connection due to a coax failure...still worked as the centre connector was intact, but caused weird problems with more than 10 watts. Obviously check SWR, decouple w/4-5 turns of coax where the coax enters the car.

C) Antenna....rule of thumb (tho not always 100% true) is that the more antenna you can have, the better. Many "shorty" antennas are nothing more than cosmetic dummy loads (once again, not all, there are some well-engineered short antenni out there). The hamstick is a good compromise on a bumper mount and a long stinger. If you can do that, I'm envious, as my company car is plastic and will not support such an install. I, too am restr icted to mag mount antenni except for the trunk lip mounted 2/440 antenna.

D) Do you have an RF field meter? You may be getting some weird lobes (tho mounted on the roof you should have decent RF prop....I can understand why you're at a loss). Take a walk-around w/the rig on low power and see what the field looks like.

E) Maratrac....programmable? If you're 5kc off or so, could cause the problem. Good freq counter will tell you, but assume you've done that.

I'll buzz thru some of the other replies, probably the majority of the above has already been suggested.

Hope you find the problem!
Andrew

In otherwords you don't get something for nothing. In a 'gain' antenna you achieve that by reducing its pattern in other directions.

A 1/4 wave can indeed be a better choice, in certain terrain...i.e. hills and valleys.

Dan/W4NTI

Take it back to the person who programmed it and have him either program a button to turn the NB off or disable it internally. I know there is a spot in the chassis to do this. I have the same problem with my Syntor X 9000. I programed a button to turn the extender on and off.

Actually they aren't. Grounding the head would be quite difficult because it's in the middle of my car, mounted on the back of the arm rest between the driver and passenger. I'd have to run quite a long grounding strap to get that thing grounded anywhere. The main part of the rig is just sitting in the trunk, on carpet, much like my 2m/70cm dualband sits under the passenger seat of my car. I am considering trying to find a way to at least ground the main part of the radio.

Coax seems fine. I'll try coiling the coax inside the trunk.. lots of extra coax in there...

If I got one, it would probably be mounted on a
magmount on my roof, like the current 1/4 wave. What
do you think the performance of that setup would be?

No field strength meter, but I do have a freq counter
I'll have to drag out. I am sure it's programmed
correctly though. I gave the frequencies and PL's for
the repeaters to the guy I bought it from.

Andy,
The wiring of your rigs is causing most of your problems. Your radios need to be ran + and - straight to the battery. Also your rigs need to be separately grounded to the frame or body of the car. This will control any RF problems that you may have. As for an antenna. A hamstick will work ok but don't attach in via mag mount do a trunk lip mount or get out the drill and make in perminate. The antenna needs to have a good ground as well as the rig.

Andy, that may be part of the solution. The control head obviously works without a dedicated ground, but the radio REALLY needs to have the chassis grounded to the car body (this applies to any radio, IMHO, esp. high RF output radios). And, as Jamie states, the Hamstick style antennas do need good RF grounds. I've seen center fed vertical 6m dipoles (which do not need to be grounded) but none for mobile use.....any 'Listers know of another solution?

Cheers;
Andrew

I do plan on wiring the radio with it's own wiring
directly to the battery, instead of sharing the wiring
with the other radios. As far as grounding out the
rig, how would you suggest I do that? Is there a
certian type of wiring I should use? Where should it
be attached on the radio and where should it be
attached in the trunk?

Ok, I'll try that. If I remember correctly, you said
it should beep 3 times to indicate that the NB has
been disabled?

Do you have any suggestions on how to go about grounding the head? As I stated, it's mounted to the back of the arm rest that sits in between the driver and the passenger, so I have to kinda reach into the backseat to turn it on. I am not sure where I would attach a ground strap to the head or where I'd run it to get it to the chassis. Also, what would be the best type of wiring for this?

andy
you can find a ground where your drivers seat attaches to the floor
there should be a bolt there close to where you have the head sitting
as for the radio in the trunk check out the inside of the fender where
the tail lights mount you should be able to find a ground source there
as for wire any good copper braid would do well

Ok, I'm gonna show my ignorance when it comes to
cars... How can I identify a ground source? Also, is
bare copper wire ok, or should it be insulated?

just about any metal screw or bolt will be screwing into metal which is
a ground source
as for wire either one will do doesnt much matter as long as its copper
12ga or heavier and kept as short as possible
then just back a screw or bolt out enough to get the wire under it then
retighted and hook the other end to any chassie screw on the back of the
radio or control head
this is all pretty simple stuff should have been covered when you
studied for your tech license

1831. Hello Group

Yahoo group: 6meter (2000 — 2003)
Date: 2002-10-05 12:27:31 UTC
From: John Cook
Topic: 1831 Message: 1831

Hello, I'm new to the Group. I got interested in 6 meter through my military Jeep hobby,I operate dual 35 watt FM RT-524 military rigs from my M151A2 jeep as a mobile repeater.
Lately I've gotten much more interested in the DXing and have been studying what ssb 6 meter rig to get....hope to get set up in the shack for ssb on 6 soon, looking forward to some good OSO's with ya'll
Any sugestions about good budjet rigs that will do the job will be appreciated!I'll be building a beam antenna since I know that the antenna is even more important than the rig you are using for really getting the signal out.
73,
John Cook

well it depends on your budget
there is the ranger 5054DX for around $320
the MFJ 9406 for $250ish
TenTec has a 6 and 2 meter job for around $600
then there are the used radios
like the kenwood TS60 6 meter all mode
icom IC551D
kenwood TS600
yaesu FT620
heathkit SB110 old tube rig
swan 250 old tube rig
drake TR6 old tube rig

also consider spending a bit more and get the icom 706 3 versions the
current one is the 706MkIIG sells new for under $900 but its HF/6/2/440
also the yaesu FT100D which is a competitor of the 706

From: Eddie Bryant - N4UMJ
Topic: 1833 Message: 1833

If one is going to cut a 102" CB type stainless steel whip for usage without a spring mount would the length be 57-7/8" ?

I don't have a chart of any sort and figure someone here probably knows this off the top of their head.

I am planning on an attic install of this whip with a bracket attached to my AC / Heating metal ductwork as a counterpoise. This is an attempt at trying to operate 6 Meters Amateur in a restricted antenna community.

Thanks,
Eddie

Not to mention the TS680 HF+6 and the TS 690 HF+6 or many
other HF+6 rigs..like the Alincos, etc...they are all going
now for much lower prices on the used markets (I saw a TS680
sell for less than $400 recently...I paid $1000 for mine new in
the 80s) The TS600 is ok but the later models like the 660
or 670 are better rcvrs, and include some of the HF bands..
(they are smaller than the 680 if I recall)...
plus the 600 did not have rptr offset in it (pity!)..but
there IS a way to modify it for such..
Also the old Yaesu FT680R, the ICOM IC-560, and many other
allmode 6mtr solidstate rigs out there on the used market..
(if those not using them would sell them :)

hey eddie
first go to this site http://www.qsl.net/kd4sai/antencal.html
you just punch in the freq you want and it tells you what it should be
second good luck with the attic antenna on 6 watch out for leaks in
the cable TV and also the phone lines you may interfere with
good luck

A 1/4wave whip w/o spring on 6 will be 234/freq in MHz x 12 = inches;
so for say 50.1 MHz, its 234/50.1 x 12 = 56.04 inches...
57in would cause it to resonate LOWER than 50 Mhz...
This is true of any 1/4wave whip used on 6mtrs...

I operate 6 with a whip sticking up off the vent pipe outside...
and you can lay 4 radials of wire at 90degrees sloping down the roof
and tie them off to the side boards with nails and string...you could
use a colored string and wire to match the roof color...and paint
the vertical whip black...makes it hard to see! :)
ANY antenna outside is better than one inside....

use 3045 is good for a motorola with a spring base moune, Using a different antenna might be more like 3000 i think like for 10 meters. Belive it or not even using the same antenna on a truck like an armored car the cutting is different.Always remember to cut it for the lowest freq u plan to use as longer is better thenn shorter Joe Leonard

Hi Everyone, One think i seem to be forgetting is that you all are not mounting your antennas on the rear of Ford Crown Victorias, A center mounted antenna on teh roof or a ground plane might be closer to the formula. I did make a 6meter ground plane once It seems to me it was about in the lower 50s like 53 or 54 imches but with a good byrd wattmeter it can be determined. I do have the motorola cutting charts for anyone interested Joe Leonard

Andy, just a simple ground lead should be sufficient. I use 12 ga wire for my ground leads for the lower wattage stuff....if you have a good neg. lead coming to the rig from the battery the 12ga will work well. If you're using chassis ground for the negative connection (NOT recommended) then use 6 ga. wire. I've always found that I get more RF hash when I use the chassis ground instead of a direct connect to the battery. YMMV.

Cheers!
Andrew

I've been talking to a Motorola tech and he's recommend a chassis ground over the connection to the battery. This morning I wired the pos. wire directly to the battery and the negative wire is chassis grounded in the trunk. I've also coiled the coax about 4 or 5 times after it entered the trunk. When I go on the road on Wednesday on my way to work, I'll try to get into the repeater that I had difficulty with and hopefully someone will be on to tell me if it's working as it should. I haven't ground the actual radio itself, on the neg lead is chassis grounded, but I intend on doing that soon too.

do you have to turn off the radio before starting the jeeps? when i was in the army in 74-77 we had a rule if you have the radio off and the jeep off you had to shut off the radio to start the jeep or you could burn up the insides then you could get an article 15. don

It's just insurance that allows you to minimise RF hash picked up by the long ground lead. Getting a ground ONLY from the chassis might be ok, but I've had cases where I actually picked up more hash via chassis ground versus chassis/direct batt. connect (which also means I probably had a ground loop going...also not too good, but a whole other discussion).

Hope the (good) advise from the others will help you out, and just filter the rest <<grin>>

Sorry, should have stated a time....it was last evening during greyline....around 6PM local time is the time to listen. We had good contacts until 8 pm when the band just shut down. Lots of LA and TX contacts, some NE, and several double skip Argentine stations heard (but he couldn't hear me, unfortunately). I'm going to try again, natch!! Early morning during greyline is also a good time if you're an early riser.

W/the current financial state I'm in, can't afford to move. Actually, I've got a Omniangle up, no one complained (and I asked, first). Good neighbors! I'll get them used to that antenna, then try the 3 ele. Cushcraft. Hehehehe.

Andrew

A few tips....when the pileup is that big....try and call AFTER the majority would have made their call. Only put in your call once. Don't keep calling and calling.

Try moving slightly off of frequency. Vary it a bit. But no more than about half a khz.

It is a good idea to do so. Many vehicle starter systems will put a large
amount of juice through the system, and anything connected to it.

Tried all the above (and they're good suggestions)....but it sounded like a Ducie Island pileup! Heck, I even speak Spanish and tried that....just couldn't get thru. Of course, sometimes ducting get a bit monodirectional, so it may not have been me (trying to do the "feel good thing" here) <<grin>>

Who gives a rip what that goof likes? I sure don't.

Nope didn't hear a peep, But I have the beam towards SA and the main on .125 and the remote on 160.

I run older equipment, so I have no scan.

I run a transverter kit by TT and a Triton IV by TT. To a HB 6146b pair that gives me about 100 to 3 3element, also homebrew.

1858. Update on Motorola Maratrac problem

Yahoo group: 6meter (2000 — 2003)
Date: 2002-10-07 18:58:23 UTC
From: Andy KC2SSB
Topic: 1858 Message: 1858

This morning I re-wired the positive wire to the + terminal on my battery. I hooked up the - wire to a chassis ground in the trunk.

I just tested 2 repeaters and got the following results: On the first repeater, I keyed the repeater, but didn't keep it keyed up. The signal strength sounded constant - strong. On the second repeater, I would keep the repeater keyed up, but the audio was very distorted/choppy. It was described as sounding like there was "something loose". If I had the same results on both repeaters (kept the repeater keyed, but bad audio), I'd suspect a microphone problem, but since I couldn't even keep the first repeater keyed, I am thinking it is something else. Perhaps the PL settings are not correct. The actual PL tone might be set right, but they might need some minor adjustments.

I had a similar problem with an old 2m all mode rig I used to have. It had an external PL box hooked up and two dials had to be adjusted inside to get the box to keep the repeaters keyed. Does this sound right?

sorry you didnt hear anything the band was hopping from about 6pm edt to nearly 11pm i was hearing 1s 2s 3s 8s 9s 0s with a very wide range of grids
i even heard a couple VE3s as well so you must have been out of the shack or something there was even a bunch of short hops i was hearing NC SC TX LA and AK

your stantion beats the hell out of this MFJ 9406 but i hope not to have it much longer i have a lead on a swan 250 with a 2 meter transverter so that will be cool (catch me if you can)....grin

1860. Update on Motorola Maratrac problem 2

Yahoo group: 6meter (2000 — 2003)
Date: 2002-10-07 19:09:00 UTC
From: Andy KC2SSB
Topic: 1858 Message: 1860

Just back from the mobile... did another test on
simplex and everything sounds fine to the other
stations, so it appears to be a problem related to
repeater operation. Just figured I'd through that in,
in case it's of any significance to those of you
helping me.

i would check the freq that you are trying to work i'll bet its
programed a little off freq thats why your having a hard time hitting it
and when you do you sound distorted

Does this mean that you had the simplex stations decode your CTCSS to make
sure it is working correctly?

I have choose to ban Dan, W4TNI, for a while. I had asked him to keep his personal matters off the list and he just couldn't do that. I will not put up with anyone taking pot shots at other members of the list. Some people on this list may not know as much about radios and antennas as others, but the list was placed here to pass around the knowledge you may have to help newbie's or ones wanting to learn, not to make them feel bad because they don't know something. And if you and another user of this list are at odds with each other, the list is not the place to duke it out. Do that in private e-mail or in a chatroom. But while your here ignore them if you can't be helpful or at least nice. I hope I don't have to take this action again. In my opinion we have the best 6 meter groups on the net. Please, lets keep it that way.

No, I was on 52.525 and 3 stations all said I sounded fine. On the repeaters, I was unreadable. I checked the freqs with a frequency counter and the radio is transmitting the correct input frequency, so it's got to be a problem with the PL tones not being transmitted properly.

remember your on FM so its possible that you are just in a null of the repeaters antenna best way to test that is to have someone with a known good 6 meter FM rig try keying the repeater while parked next to where you are parked if he gets in then its your radio if he doesnt then its the repeater

Greetings to one and all...

I'm new to list. So let me tell you about myself.

My name is Ken and my Call is KE6QNK. I have been licensed for about 5 yrs.
I work 2mtrs and 220 right now but I'm looking into getting into 6mtrs.

I live in the SF Bay are in Grid CM87xx. Not very active on the air right
now but I'm starting to get back into gear. I hope to see some good things
from the group soon.

1869. restricted antenna locations

Yahoo group: 6meter (2000 — 2003)
Date: 2002-10-08 01:13:35 UTC
From: thirtysixhorse@netscape.net
Topic: 1869 Message: 1869

I lived in an upscale apartment complex most of last year. ?I had a corner reflector for two meters and a loop around my balcony for ten and six. ?I thought I had a very neat installation, but I was told to take it down as no antennas were allowed. ?I went through the complex and photographed 18 other apartments with satellite dishes on their balcony, some very sloppily installed. 18 violators out of 384 apartments--not a high percentage, but proof that they weren't enforcing the rules on everybody. ?I was then told that the real reason was that the company did not allow any article to be installed on the balcony and my loops were held by hook screws that I screwed into the corners. ?OK, got out my electronic camera this time, and found many flags, school and professional sports team banners, decorative things and hanging flower pots all hung by screw-in type of hooks. ?Shortly after that 9/11 happened and flags sprung up on most apartments. They decided not to enforce the rules on me, but they were happy that I moved out soon thereafter. ?

My advice for restricted antenna residences is to go slow, go at night, make things really neat and hide as much of the hardware as possible. ?Paint coax and support poles the same color as the building. ?What is overlooked will never be reported. ?Be sure to consider using existing structures in new ways. ?One apartment I noticed was quite near to the structure built to hide the huge truck mounted power dumpster for the complex. ?A coax could be buried to run from the apartment to the structure just using a hand spade of the type one uses in the garden. ?That is something you could do in the middle of the morning because doing it at night would look suspicious, but doing a little gardening in the morning, when everyone else is at work, might get you by clean. No one is going to care what type of wires you string in the roof of the garbage structure. ?Same technique would apply to wooden carport structures to a lesser degree. ?If you strung a dipole in them, or on them, and made it look professional or purposeful you might never get noticed. ?In professionally managed apartment complexes you will find that so many services are subcontracted to so many companies that nobody really knows or cares what is going on in the area. ?The landscape guy isn't going to know or care that your coax doesn't belong somewhere, he is just going to work around it. ?The painters asked me if they needed to move my antenna or paint around it, and apoligized for knocking on my door! ?I gave them each a pair of cold drinks (it was a hot day) and helped them move the antenna, and they held it while I bolted it back in place!

If money is not a problem, one might consider hiring a contractor to install coax underground and inside conduit in a building. ?Since it is a professional working with a service truck, it might be overlooked in a rental area or in a condo situation. ?If you hire someone by the hour, they aren't going to care what you have them do as long as the bill is paid. ?A cash tip helps immensely here too--what is $20 to you if you can get on the air?

I'm not encouraging anyone to violate any law, or maybe I should just say that the above is for entertainment purposes only, but sometimes you have use the biblical admonition to "be harmless as a dove but smart as a fox....." ? IF I were going to tell somebody to violate the law, I'd probably mention these huge, tall support poles that are used in the cloverleaf areas of interstate highways to hold the lights up in the air.......did you know there is an access panel at the bottom of the poles that, when opened, reveals a crank mechanism that will lower the entire lamp cluster to the ground? ?One could then, if one was to take the legal risk upon himself, attach a vertical wire or dipole and raise the whole antenna to unprecendented heights for field day or whatever, all courtesy of the Department of Transportation of your state!

73, ?Roy ?

I assume there's probably some sort of adjustment for this inside the radio.. gonna have to talk to my buddy in the radio shop at work on Wednesday and see what he says.

i have an ever better suggestion rather than trying to make the system comform to our hobby why not just look for areas that dont have the CC&Rs
seems like the people who move into those types of areas want the restrictions cause it keeps property values high and nice clean neighboorhoods
but then cont understand why they are not allowed there hobby
well you signed the lease or the deed for the morgage in full knowledge of what you where allow and not allowed to do
so find yourself a nice house in a nondeed restricted area or an apartment where they dont mind you modifiying the balcony and enjoy your hobby
happy hamming

Welcome to the group, Ken! I'm sure you'll enjoy 6 meters... Not sure if you're in the market for a 6m rig right now, but two that you should consider is either the MFJ 6m SSB radio or the Ranger RCI-5054DX. The Ranger sells new for $300 from HRO. An MFJ radio can go for $150 - 200 used, but it's not as nice as the Ranger. As far as an antenna goes, if you're in the market for a yagi, Cushcraft makes a nice 3 element for a reasonable price. Radio Shack has their TV antenna rotators on clearance for $10 right now, so if you can find one left, snatch it up to turn ta Yagi you might get. If you don't plan on getting a Yagi right now, get the rotator now, because you won't find this sort of rotator for a better price. I use one to rotate my 3 ele yagi for 6m and 5 ele dual bander for 2m/70cm.

Get someone on 52.525 then have them go to the repeater freq reverse and listen to your rig direct and talk to them that way. Find someone that has PL decode and a good bass response speaker..... What are the repeater inputs??? If they are higher than 525, you may need to adjust the VCO.....especially if they report "ringing" in your audio.....

No, I was on 52.525 and 3 stations all said I sounded
fine. On the repeaters, I was unreadable. I checked
the freqs with a frequency counter and the radio is
transmitting the correct input frequency, so it's got
to be a problem with the PL tones not being
transmitted properly.

This sounds like the problem I was having with the Alinco M06TH mobile 6 meter rig. On Simplex I sounded great but when I went to the repeaters no one could hardly understand me. It ended up that the rigs modulation was high and the devation was way high. Once both where adjusted it was smooth sailing. Might be something to check into.

The repeater inputs are all below 52.525. It's tough finding someone in this area to go to 6 meters. I was lucky today in finding 3 guys, but if I haven't fixed the problem by the time I get someone one, I will give that a try. I assume they would have to have PL decode on in order to see if I'm coming through.

I think you're replying to an old message there...
it's already been done. On simplex, I sound great. On
repeaters, I have trouble keeping them open. Possibly
a PL problem.

I am also a motorola tech and second that grounding in the trunk to a good grund like the fender tip just above the weld for the two sides with a 7/16 or 3/8ths sheet metal screw using a star washer after u scrape off the paint and make sure to tighten it very tight. Joe Leonard Mptorola Tech

Keith makes a good point. Keep the screw short. I can remember all kinds of things messed up by screws to long poking into something. Gas Tanks, AC lines etc. In my days of doing commercial 2 way radio installs.

Subject: [6 Meter Sked] restricted antenna locations

I lived in an upscale apartment complex most of last year. I had
a corner reflector for two meters and a loop around my balcony
for ten and six. I thought I had a very neat installation, but
I was told to take it down as no antennas were allowed. I went
through the complex and photographed 18 other apartments with
satellite dishes on their balcony, some very sloppily installed.
18 violators out of 384 apartments--not a high percentage, but
proof that they weren't enforcing the rules on everybody. I was
then told that the real reason was that the company did not allow
any article to be installed on the balcony and my loops were held
by hook screws that I screwed into the corners. OK, got out my
electronic camera this time, and found many flags, school
and professional sports team banners, decorative things and
hanging flower pots all hung by screw-in type of hooks. Shortly
after that 9/11 happened and flags sprung up on most apartments.
They decided not to enforce the rules on me, but they were happy
that I moved out soon thereafter.

My advice for restricted antenna residences is to go slow, go at
night, make things really neat and hide as much of the hardware
as possible. Paint coax and support poles the same color as the
building. What is overlooked will never be reported. Be sure to
consider using existing structures in new ways. One apartment I
noticed was quite near to the structure built to hide the huge
truck mounted power dumpster for the complex. A coax could be
buried to run from the apartment to the structure just using a
hand spade of the type one uses in the garden. That is something
you could do in the middle of the morning because doing it at
night would look suspicious, but doing a little gardening in the
morning, when everyone else is at work, might get you by clean.

No one is going to care what type of wires you string in the roof of the garbage structure. Same technique would apply to wooden carport structures to a lesser degree. If you strung a dipole in them, or on them, and made it look professional or purposeful you might never get noticed. In professionally managed apartment complexes you will find that so many services are subcontracted to so many companies that nobody really knows or cares what is going on in the area. The landscape guy isn't going to know or care that your coax doesn't belong somewhere, he is just going to work around it. The painters asked me if they needed to move my antenna or paint around it, and apoligized for knocking on my door! I gave them each a pair of cold drinks (it was a hot day) and helped them move the antenna, and they held it while I bolted it back in place!

If money is not a problem, one might consider hiring a contractor to install coax underground and inside conduit in a building. Since it is a professional working with a service truck, it might be overlooked in a rental area or in a condo situation. If you hire someone by the hour, they aren't going to care what you have them do as long as the bill is paid. A cash tip helps immensely here too--what is $20 to you if you can get on the air?

I'm not encouraging anyone to violate any law, or maybe I should just say that the above is for entertainment purposes only, but sometimes you have use the biblical admonition to "be harmless as a dove but smart as a fox....." IF I were going to tell somebody to violate the law, I'd probably mention these huge, tall support poles that are used in the cloverleaf areas of interstate highways to hold the lights up in the air.......did you know there is an access panel at the bottom of the poles that, when opened, reveals a crank mechanism that will lower the entire lamp cluster to the ground? One could then, if one was to take the legal risk upon himself, attach a vertical wire or dipole and raise the whole antenna to unprecendented heights for field day or whatever, all courtesy of the Department of Transportation of your state!

73, Roy

Could be a problem with the repeater themselves!!!

I just retuned the Beaumont 53.05 rptr yesterday....GADS, what a
POS!!(Spectrum...need I say more?? Synthesized!!! EVEN WORSE!)
The poor rcvr was massively desensed by the xmtr every time it
keyed....After working on the xmtr on the IFR for 2 hrs, it finally
got clean and 30watts out! (It was doing 15 originally)...the duplexer
(WACOM) was slightly out of tune...quick fix there...PLUS I found
the trustee had made up SINGLE shielded cables from the rptr to the
cans!!! EGADS!...I found ONE double shield cable at the site, put
it on the xmtr side, and NO MORE desense!!! In fact the rptr WORKS
now...though I am not a fan of single site duplexer 6mtr rptrs
(did 15 yrs on lowband commercial...split site with a NOISE BLANKER
on the rcvr is the way to go...and this Rectum..eeeerr Spectrum..
has NONE!), this one actually seems to work ok right now..
Mobile range was out 30 miles (rptr is at 250ft)....COULD be
better but the rcvr doesnt hear so good.....(.4 or so instead of
.25 the MICOR down the racks hears on 48 MHz)...SOOO if you hear
a rptr on 53.05 MHz with the call NC5V, set your tone encoder to
141.3 and give a holler...the Beaumont, TX folks would love to talk
to ya!

(for those wondering, this rptr is at a comemrcial site where I also
have a UHF 440 rptr....since the site managers let my machine as well
as this six mtr box there for free, we have to submit to certain
technical qualifications....OBVIOUSLY this 6mtr rptr didnt!!! which is
why the site mgr asked me to look at it and fix it...or else!!!)

BUT I did find one thing....ITS PL decoder does not hear as good as
it should....COS mode on the rptr is fine...in PL mode, the rcvr will
mute BEFORE the noise squelch closes....sooooo its time to change the
PL decoder...or run the rptr COS....COULD THIS be Andy's problem??

Could be...but then when you put a rptr on PL, NOONE seems to check
any more...PL doesnt make trouble go away....it merely covers it
up...but its still there :)

Outside Dishes for SAT and offair TV antennas ARE allowed at apts, etc under Federal law....Amateur XMIT antennas are not....NOW with that said, get a wideband log periodic antenna that covers 50-1000MHz and use that for ham use...claim it to be your TV antenna...they cant do anything about it :) Remember the antenna must be within your area under your lease (balcony or porch area..) it CANNOT be in a common area (outside in the courtyard, etc)...It CAN be mounted on the roof or eve or similar WITH the apt management approval...most do for those...

Also, some of the sugestions are on common property.
This could make yyou liable if there was some damage
or injury.

RE: Moving to where there are no CCRs or restricions:
Here in Southern CA it is very hard to find a home
built in the last decade or two that does not have
CCRs unless it is in an unincoporated area or a very
high priced area.

No chance of that. If there was a problem with one repeater and not the other, I'd consider that, but both repeaters are well maintained. One of the guys who tested out the repeaters with me was on an HT and he got in fine.

if you have a loud S7-S9 noise level i would say you do
if you have an old hand held AM transistor radio walk around the power poles and tune to a spot where there is no stantion and you should hear line noise if there is any
another way around it is to put up a cubical quad antenna they cut out a lot of the power line junk

I have always used a am radio and walk around to power poles to find where
the noise was comming from..then call the power company and let them know
what I found and they would come out and take care of things...
you might try that...

Hi Randy,

Not sure if this who if anyone this was specifically directed too, but I received it. In either event, I can't agree with you more about your method to track down those pesky intereference problems.

It is good to hear from you. I spent the last of September and the first of October in Bermuda. What a great place to visit. Didn't get to operate from there because reciprocity is only for Generals and above. Boy, it sure would have been nice to work some from YP9 call area. Maybe, next time.

Started a formal code class sponsored by CARC last night. I am hosting it at my house in Lexington. We had a great turn out. 14 in all with 2 coming all the way from Greenwood and Laurens. It was good to see a lot of people that I have talked to on the radio. We meet every Wednesday Night at 6:30pm at 114 Old Chapin Road in Lexington. If you have a spare Wednesday evening, we would love for you to drop by and say hello.

Got to go for now. I hope to see you or talk to you soon.

Hook up a radio or watch/listen to TV channels on the low end
(channels 2-6)....
Got HF rig? Listen on 10Mtrs in AM mode...

If you do have noise, contact the power company who owns the lines
(and that may not be the one supplying YOU power....if you live in
an unregulated state)...its their problem to correct and they have to!
Also you can make sure its nothing in YOUR house by turning off the
main disconnect breaker to the entire house while listening on a
portable radio (AM mode)....

I haven't had much time to listen in on 6m lately
myself, but from what I've read, it seems that there's
been a number of days where South America and the
Carribean have been coming in... wish I could get some
of those.. only other countries I've talked to on 6m
is the UK and a few other European countries (And
Canada too, but are they REALLY a foreign country? :))

Andy,
From here in North Carolina a Canada contact on 6 meters is nice. I hope I get my IC-706mkIIg fixed soon. If this winter is like last winter I don't want to miss it. I worked 8 Europe and North Atlantic countries, every providence in Canada, a few place in South America, also I worked Alaska, Washington, Orgeon and Califorina and a few other states. Out of all of the contacts I made between Nov. and Feb. my favorite was the Alaska. I know alot of hams that work 6 meters here in the Carolinas that have never been able to get that one, and I worked 3 stations there in one day. Those are some qsl cards I'll show my grandkids someday.

73 and Good DXing,
Jamie R. Dean - KE4HTM

Had a good double or triple skip to SA the other day, similar to last week's Argentina contact (attempt!). Worked Venezuela, but the opening was quite short (3-4 minutes). W/6 meters, ya gotta monitor, or just get fortunate, as I did. Turned on the rig and heard the guy calling...can't get better than that. Some local QSOs but not much more. I'm trying more on Sunday PM and Sat PM for greyline prop, as it seems that gives the best North/South DX conditions. I just hope for another shot at that LU7!

Hope you get the radio fixed, as propagation should start to pick up close to the end of the year (winter equinox).

Andrew

I used the 5054DX (25 watt version). I loved it. It has full band coverage and is a TRUE all mode (AM is even included!). For $300, you can't go wrong. About the only downside I could find is the fact that no PL tones are included. If you want PL tones, you need to wire up an external PL box or get some sort of PL board for the radio. Since I used it primarily on USB, this wasn't a factor for me. I also wired up an Astatic 575M6 hand mike and got excellent audio reports. I don't think the stock mike is that wonderful. A nice thing about this radio is that it should be able to accept other amplified microphones, like the D-104, which is a really nice one, if you're using it for base operations. The only reason I got rid of it was because I bought an FT-100D. It was easier to get this rig than to buy seperate rigs for 6/2/70cm all mode, and when I finally get around to upgrading, I'll be ready for HF. Check out http://www.eham.net/reviews and search for the 5054. A bunch of reviews there for it.

Ken,
I have a Ranger 5054DX that I got in a trade of some equipment. I have used it alot and it works great, but I also have an Icom IC-706MKII that I like even better and it has HF. You might want to think about picking something like that used. I hear they are going for $500 or maybe even a little less used. That would also give you HF and 2m. It also has a lot of features that the Ranger does not have. More options for filters etc.
Something to think about.

hey ken
for what they want for the ranger rig new you can find an icom 706 which
is a lot more radio for about the same money on the used market the 706
is HF/6./2 and its 100 watts on HF/6 so it will do everything you need
and then some

I have a Alinco DX-70TH (100 w on 6 meter), used
about 450$ and got all the HF bands too...that would
be my choice rather then pay 400+ for the Range 100w
rigs,,,,plus the Alinco has the tones which are
needed for 6 meter repeaters....
you need 100w to reach the distant repeaters on
FM...when the 6 m bands opens in ssb, 100w is not
necessary but nice to have.....

I also have the Alinco DX70TH. I bought it as an open box return from HRO. They include the full warrantee (the prior purchaser had it over the weekend and returned it) Not only is it all mode (with a tone board which the Ranger models don't have) but it is also all band 160-6 meter. Nice easy to use radio that leaves you all set when you upgrade to general. It has a good receive and a decent sound all around on transmit. Even new these radios can be had for around 775 when on special. It also has a scannable 100 position memory, great for the FM stuff and to throw some of the active DX channels. The only downside that I saw was that the PL board is DIP switch controlled and they are mounted under the radio.

Yahoo group: 6meter (2000 — 2003)
Date: 2002-10-21 03:38:36 UTC
From: fhollenb
Topic: 1913 Message: 1913

Hello all,

kc8skk will be in Lincoln County West Virginia em88 on Oct. 25-27.
We will be rxing on 50.125 and HF.

73, Frank n8uas

1914. Site for new or prospective hams

Yahoo group: 6meter (2000 — 2003)
Date: 2002-10-21 06:35:42 UTC
From: Jerry Hemby
Topic: 1914 Message: 1914

Check this out if you are a new ham or maybe thinking about becoming
a ham in the near future. Older, seasoned hams are need too to
provide assist to the newer ones.
Thanks for checking it out.

It was nice of you to post this but you need to check the dates on what you send. The list time the site was updated was 1996 and the part 97 was dated Dec. 20, 1994. And with the change of the code and such things have changed.

73 and Good DXing,
Jamie R. Dean - KE4HTM

1923. New poll for 6meter

Yahoo group: 6meter (2000 — 2003)
Date: 2002-10-26 01:18:26 UTC
From: 6meter@yahoogroups.com
Topic: 2 Message: 1923

Enter your vote today! A new poll has been created for the
6meter group:

How much power do you normally run to
make DX contacts??

o 0-10 watts
o 11-25 watts
o 26-50 watts
o 51-100 watts
o 101-500 watts
o 501-1000 watts
o 1001-1500 watts
o When I key up the power company opens a new reactor.

To vote, please visit the following web page:

http://groups.yahoo.com/group/6meter/surveys?id=10949306

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

TODAY'S Fast Forward:

A computer was something on TV,
>From a Science Fiction show of note,
A window was something you hated to clean,
And ram was the father of a goat.

Meg was the name of my girlfriend,
And gig was a job for the night,
Now they all mean different things,
And that really mega bytes.

An application was for employment,
A program was a TV show,
A cursor used profanity,
A keyboard was a piano.

Memory was something that you lost with age,
A CD was a bank account,
And if you had a 3-in. floppy,
You hoped nobody found out.

Compress was something you did to the garbage,
Not something you did to a file,
And if you unzipped anything in public,
You'd be in jail for a while.

Log on was adding wood to the fire,
Hard drive was a long trip on the road,
A mouse pad was where a mouse lived,
And a backup happened to your commode.

Cut you did with a pocket knife,
Paste you did with glue,
A web was a spider's home,
And a virus was the flu.

I guess I'll stick to my pad and paper,
And the memory in my head.
I hear nobody's been killed in a computer crash,
But when it happens they wish they were dead.

Just post the questions here....we've a good group, most all would be happy to post valid responses. I personally am hoping for some mid-day openings, as I'll be crossing the Smokies tomorrow around 1 pm.....here's hoping for some good propagation while I spend 12 hrs on the road! I run a QRP mobile unit (MFJ9406), a Yaesu FT736R with an external amp, as well as the Alinco DX70, which also covers 6M. Over the past few years, I've also redone several boatanchor rigs. Lots of fun if you have the time, as of late time has been a precious commodity! So, much of my 6M work has been mobile.

Good antennas are important....admittedly you can work the world with a few watts when the band is wide open, but with current condix, at least 100W into a directional antenna makes it easier to make contacts during non-peak times. Lots of good rigs out there, but the best thing to do is to get your feet wet!

1947. DX Question's

Yahoo group: 6meter (2000 — 2003)
Date: 2002-11-04 22:16:15 UTC
From: Robert Klaus
Topic: 1947 Message: 1947

Well I have been asked to post my question's here so here goes:

My DX operating questions were mainly about proper
DXing when the propagation is in, I have made contacts but more often than not I feel like I will step on someone's toes as sometimes I will hear more than a few stations in various areas talking and don't want to bother them. I think I could make more contact's if I was not so afraid of upsetting somebody. A lot of times somebody will
just come in on frequency and start talking and get a contact but sometimes even when I
have been CQing every 20min. or so hoping for a local contact long before the propagation comes in and make a
call they make a negative comment, not often but once is to much. Just the other day hours after the propagation was gone as far as I could tell I was listening for about a hour then did a CQ hoping for a local contact and a local (whom I never heard before) says thanks that was on top of a J#### whatever
station, I never CQed again that day and never heard that Ham speak before or after how could he have been having a conversation? What I have been doing is waiting until the DX station says good
bye to the station he is talking to then say my call fast and a lot of times they call me back, or when I
hear no locals speaking I call CQ CQ W7XLR W7XLR DM26 and until the last two incidents it seemed fine and sounded the same as what the others were doing? In addition how does the DX window work 50.110? from what I understand I just listen and if I hear a DX station call then I answer and QSY? But I don't call there correct? Sorry for all the question's but it seems like the only people who will talk local are new also, the experienced guys don't seem to
want to talk unless DX comes in then they seem to want you to just go away, except for a few who are really cool but hard to catch and I forget to ask all my questions because they are so much fun to talk to. I really love 6M I'm even starting to study CW now because I heard it on 6M and it bothered me that I could not join in or understand! My gut feeling is that I have been doing fine and very respectful I think I just ran into one or two old crabs by mistake but still would love some pointers. BTW that's what bothers me the most if I do something wrong why don't they explain it to me? Anyway I still love 6M! I have been getting reply's 99% of the time with my old FT-620B and 20W PEP!

From: Jim Nuytens
Topic: 1947 Message: 1948

Whether it is DX or not, you should never just call CQ out of the blue.
The proper way to avoid some of what you are experiencing is to first
ask if the frequency is in use. I will ask 2-3 times and if I don't
hear anything or anyone, then I'll call CQ. Your mileage may vary. ;-)

Now, having said that, you can't please everybody all the time. I
wouldn't be too terribly concerned about it. Some people on 6m (and
many other bands, BTW) will always have a bug up their ass about
something you do that doesn't fit into their idea of what is "normal".

I once listened to 3 stations involved in a relay situation park
themselves on the 6m SSB call freq for 30 minutes without any regard
for the fact that they were doing that. One of them was the husband of
a ARRL officer, who should have known better. The callsigns and names
will not be revealed to protect the guilty. ;-)

Enjoy 6m and stop getting all worked up about it. Nobody's perfect and
there are Kilocycle Kops everywhere who have nothing better to do.

This email brought to you by PMMail/2 and OS/2 Warp 4.

>>

Ah, Kilocycle Kops! Of course, listening first is necessary, but that's what you're doing. I normally ask to see if the freq is in use, and don't forget to QSY up a bit off the calling freq if you want to ragchew. As propagation varies, a simple comment that he was trying to get a JA station should have been sufficient, not to snap at someone. Bad day, it sounds like!

Just wish it had not poured all the way across the mountains today....even 2m and 70 cm was not too good! 6M was dead in eastern Tenn/western NC. Oh, well....I'm awaiting the weekend, and the Leonids are coming soon. Try meteor scatter while they're coming thru. There is a bit of info on it, use www.google.com and do a search for 6 meters and leonids.

Heh....all I have to say is "ouch!" Although I do have a 2/440 rig mounted on the bike, and use a headset for comms...vox doesn't work too well, hihi! The only 6M I get in on the bike is portable....I've got an antenna which breaks down quite small....take the QRP rig with me into the mountains and play from mountaintops. Too much ignition hash to run mobile....on your bike, the hardtail and straight pipes wouldn't let you even run an FM rig!!

Happy riding, avoid the cagers!

Eric
I have been on 6M since the mid-70s. The old rigs were not very frequency stable and had high RFI.
Because of satellite and cable you don't hear about RF problems as much as with the old
tube rigs. Some of the GOOD rigs are still hard to find (Heath SB110 or the Collins radio S62, Drake TR6).
If you can find an older solid state rig or the MFJ radio for under $200 you would be money ahead.
Ten watts and a 3 element beam, and you can work the world.

There are a lot of more modern multi mode rigs on the used market
if you look around...

Yaesu FT680, FT 625 or the FT620 (this one does NOT have FM though)
Kenwood TS6xx series from the 600 6m only to the 680/690 multiband
ICOM IC5xx series

The older rigs are not as stable and will not have SSB...which
is the mode of choice for most operations now...SSB, FM, AM seem
to be popular in that order..

The Swan is KNOWN for being a drifter.....now sure about the HX30..
never owned one...

Welcome to the hobby AND the magic band! :)

My recommendations would be either the MFJ-9406
http://www.mfjenterprises.com/products.php?prodid=MFJ-9406X
but that will only give you 6m SSB, but at a low
price, but only if you find it used. New, they cost
$270. Used, you might be able to get one for as low as
$150. Ranger makes the RCI-5054, in two versions - 25
watts and 100 watts
http://www.rangerusa.com/rci-5054dx.html. Brand new,
this sells for $300 and gives you TRUE all mode (AM
included!). For $30 more than the MFJ, it's a better
deal. These radios are starting to make it onto the
used market. I used both. I upgraded to the RCI from
the MFJ and to an FT-100D from the RCI. I'd stay away
from the older 6m radios. While they might look cool,
they aren't as reliable. I prefer buying new radios
when I can, mainly for the warentee.

Kenwood TS-690S This is a HF and 6 Meter Base radio. It does 100 watts on HF and 50 watts on 6 meters. It is in very good condition and works great. Comes with mic, power cable, box, Computer interface and manual. Price is $575.00 + Shipping

Kenwood AT 50 automatic antenna tuner works great and comes with cable to use with a Kenwood radio and manual. I will only sell the tuner with the TS-690 or after the TS-690 is sold. Price is $225.00 or $200 if bought with the TS690. + Shipping

If interested either email n8jmy@... or phone 269-792-6788 and ask for Dave. Thanks for reading Dave Kaylor N8JMY in Hopkins, MI

I use a FT-620B, it's 20W circa 1976+ no FM everybody says it sounds great and I don't even ask! I have a Par Loop up 25' and can talk to 95% or better of the stations I hear. I'm new to 6M myself and love it!!! This radio if you can find one was the first mass produced transistor rig. I do want the new Ranger and I'm saving for it!

1970. re: Re: [6 Meter Sked] rig for beginner

Yahoo group: 6meter (2000 — 2003)
Date: 2002-11-13 16:00:59 UTC
From: n5wbi@clearsail.net
Topic: 1964 Message: 1970

I agree with the recommendation to start with the Ranger RCI-5054DX. The MFJ-9406 is an excellent radio, but having a digital frequency display (the MFJ is analog ...) is much more "beginner-friendly." Plus, with the RCI you get more modes of operation -- AM, FM, CW, USB, and LSB. The only drawback to the RCI is that to use it for FM Repeater operations, you need to install a CTCSS board to be able to use the PL tones.

I've had my RCI for about three months now. Unfortunately, here in EL29, 6M has been pretty dead. Sigh ...

Hello, Eric. I will pass on a few comments, as I've owned several of the rigs that the guys have mentioned. Pass on the Swan unless it has the 210 external VFO....mine drifted like crazy on the internal....and that was after a rebuild. My old NC300 w/6M converter had a better receive than the Swan....but I enjoyed the Swan, as I enjoy playing with tube rigs. If you don't do "hollow-state", better to choose a newer SS rig.

Transverters....if you have an existing HF rig, a 10M rig or a 2M allmode rig, transverters will work well, tho a bit more complicated. Not an "appliance" solution, but a well designed and built transverter will run rings around some (not all) of the DC to daylight multipurpose rigs. I have one (TenTec) as a backup.

Older 6M rigs. If you check prices, these can get to be expensive. Monoband units (such as the unit one person is offering) tend to be expensive but QUITE good. If you just want to get your toes wet on CW/SSB and for low $$, then do consider the MFJ. I have one, it has worked several countries and lots of grid squares in the US/Canada....mobile. My main rig is a Yaesu FT736R (6m/2m/220/432mhz) with some mods to help receive on 6 and two meters. Great rig, but tends to get expensive (only 10W out on 6M, amp needed for those "few days" when the band is not too open, hihi!) when you "expand" the unit to full coverage.

Bigger bux?
Look around for the Icom 706 if you want 2M, the MKIIG for 6/2/70cm. The Yaesu FT100D is good, avoid the FT100 (this is for used gear, general comment only....lots of folks love their FT100's, but for a new op, there are a few issues that could be hard to deal with) and go with the newer units. The Alinco DX70TH is HF plus 6M @ 100 watts, the DX70T is 10 watts out on 6M, decent little rig, good receiver on 6M, but the noise blanker is the pits. You also get HF for when you upgrade.

Several portable (QRP) rigs out there....Icom had one (IC-502??) as well as a similar Yaesu model (FT690MkII if I recall correctly). Nice if you travel or hike.

Jump onto QRZ.com and read the reviews. Look for sensitive receive....you can always buy an external brick amp if you need higher power out.

One thing.....get the best antenna you can put up. A 10W signal into a great antenna will work more stations than a 100W signal into a poor antenna! Wish I could put up a "boomer" style Yagi at the home QTH, but just not possible

(dreaded CC&R's...bought the house before I got my ticket). My PAR OmniAngle works well, and is small. But, oh, for a beam!!!

Good luck and hope to hear you on 6.

1972. Virus Warning!

Yahoo group: 6meter (2000 — 2003)
Date: 2002-11-13 23:29:49 UTC
From: Tim
Topic: 1972 Message: 1972

I was informed by Linda Honold, chair of the Wisconsin Democratic Party of a virus. I found it on my machine and deleted it. Follow the directions in Linda's e-mail below, to check and delete it.

Tim Mellenthin
I got a message regarding a potential virus that was sent to my computer. When I followed the steps, I found I actually had the virus on my c-drive, so I am notifying you

The virus which sends itself to everybody in the address book. Since you are in my address book it might have reached you.

Here?s how to check to see if you have it and how to get rid of it if you got it.

The virus is called jdbgmgr.exe. It evidently cannot be detected by Norton or McAfee anti-virus programs. It sits quietly for 14 days before damaging the system.

It is sent automatically by messenger and address book, whether or not you send e- mails. The good news is it is easy to get rid of.

Here's how:

1. Go to Start, then Find or Search

2. InFiles/Folders, write the name jdbgmgr.exe

3. Be sure to search in your "C" drive

4. Then hit Search or Find

5. The virus has a teddy bear logo with the name jdbgmgr.exe -DO NOT OPEN

6. Right click and delete it

7. Go to the recycle bin and delete it there also IF YOU FIND THE VIRUS YOU MUST CONTACT EVERYONE IN YOUR

ADDRESS BOOK

Sorry for the inconvenience.

Linda Honold

if i remember correctly this is a hoax that file is a file windows needs
to run so deleting it will cause you big troubles
when in doubt go to symantec.com and do a search for the virus name it
will tell you if its a virus or not

Go to the link below for more information,

http://www.symantec.com/avcenter/venc/data/jdbgmgr.exe.file.hoax.html

Tim,

To save you time and agony I tried sending you and your email list the news that we've learned this is a HOAX. However it wouldn't go thru to all recipients thus this note to you.

We're very sorry to have forwarded this earlier warning but thought our source was legitimate, and that's another story...

Reynolds Honold

It IS a hoax... the 'virus' is the instructions itself that attempt to get the recipient to delete a needed file.. this one I believe, is one needed for java.

The file is a Java Script file...not needed except on some web sites..
the VIRUS is the IDIOTS forwarding this crap around and IT guys (like
myself) having to FIX PCs at work because someone actually believed
this jerk hoax!!!! (My IT guy in CA even sent it company wide..
when I replied that NO, it is a hoax and do NOT delete it, etc..
GUESS who the General Mgr reamed out??? NOT the idiot who 1st sent it
but ME! GEESH)

Well, back to 6mtrs!!!
(kinda makes me wonder what the guy who posted it here was thinking!
ALSO I noticed several suspicious emails in the addresses he sent to.
I THINK he was wanting folks to reply to all.....so those email
addresses could harvest replies!)

Caution, all.

This virus may be nothing more than a hoax. jdbgmgr.exe is the Java Debugger Manager and is a legitimate file. It may, however, be corrupted. If not, deleting it may cause some inconvenient. Check out the Symantec Virus Hoax page at http://www.symantec.com/avcenter/hoax.html. Scroll down and click on the jdbgmgr.exe entry for more information.

Subject: [6 Meter Sked] Virus Warning!

I was informed by Linda Honold, chair of the Wisconsin Democratic Party of a virus. I found it on my machine and deleted it. Follow the directions in Linda's e-mail below, to check and delete it.

Tim Mellenthin
I got a message regarding a potential virus that was sent to my computer. When I followed the steps, I found I actually had the virus on my c-drive, so I am notifying you

The virus which sends itself to everybody in the address book. Since you are in my address book it might have reached you.

Here's how to check to see if you have it and how to get rid of it if you got it.

The virus is called jdbgmgr.exe. It evidently cannot be detected by Norton or McAfee anti- virus programs. It sits quietly for 14 days before damaging the system.

It is sent automatically by messenger and address book, whether or not you send e- mails. The good news is it is easy to get rid of.

Here's how:

1. Go to Start, then Find or Search

2. InFiles/Folders, write the name jdbgmgr.exe

3. Be sure to search in your "C" drive

4. Then hit Search or Find

5. The virus has a teddy bear logo with the name jdbgmgr.exe -DO NOT OPEN

6. Right click and delete it

7. Go to the recycle bin and delete it there also IF YOU FIND THE VIRUS YOU MUST CONTACT EVERYONE IN YOUR

ADDRESS BOOK

Sorry for the inconvenience.

Linda Honold

1981. Wanted: Kenwood TS-60 Manual

Yahoo group: 6meter (2000 — 2003)
Date: 2002-11-15 02:00:59 UTC
From: Jim Hagen
Topic: 1981 Message: 1981

Does anyone have the Acrobat file of the TS-60 manual?? I thought I had saved it to my hard drive, but now can't seem to find it. Kenwood now only offers manuals on-line of current models. I had downloaded it from them before, but now it's not on their website.

Thanks in advance for your help,

Jim KD4HEY

Hi I never heard 6 meters open into FM portion. I heard 10 meters open then up through the 33MHz fire band through the California Highway patrol 39.26 39.60 and 39.66 and finally 42MHz freq opened but about 615est the band closed down and then 39mhz closed finally 33 closed and 10 seems quiet except for a beacon Joe FM18

1986. Rig for Beginer/ Thanks for replys

There's a FT620 on EBay.....in good shape...
and if you look on Ebay or Eham.net or possibly even the NewsGroups
like rec.radio.swap or rec.radio.amateur.equipment, you will find
something...As noted, the Ranger5054 is a good radio....so far an
excellent track record..so find the radio that fits your budget and
enjoy!! (but be aware....6 CAN be a lonely band.....it may be months
before you QSO with someone...and thats if they are local :)....
but when the magic band opens, its great!! and yes Virginia, there are
FM rptrs on 6...not that many compared to 2mtrs or UHF....and a GOOD
6mtr rptr takes some work to make it work as good....but they are
there)
Gud luck and hopefully will work you on the band soon!

Chris
WB5ITT
(I MAY be up for the meteor showers....who's gonna be lurking on
the band? I take it the normal calling freqs are the place?)

HOOOO_WAAAH! What fun this AM on 6M! Worked 4 new grids, heard tons of stations around 1000Z-1100Z. Couple of guys w/serious stations pretty much swamped me out (hey, a full gallon and a 12 ele. yagi tend to swamp out ANYONE!) but my puny 100W/omni PAR did pretty good. Very few CW sigs heard (and my CW is not up to par for short, fast QSOs...yet) but lots of SSB sigs. Don't listen on the FM portion, did anyone have any interesting experiences via simplex or repeater? Even got some time to watch the meteor shower! Even got a few QSOs in on 2M SSB.

Anyone else have (radio) fun this AM?

I had fun.. up until 11:30 est then up at 4am. *yawn* Lots of SHORT burns and pings on 6m and 2m here in Fn25. I made 2 SSB WSO (Florida) and 2 CW (Florida and Michigan). Heard some pings on 2m, but did not make any QSO's. This was my first MS so it was LOTS of fun. What a great band. Tom VA3NFA FN25 --- MadDrewski@... wrote: HOOOO_WAAAH! What fun this AM on 6M! Well, according to the reviews on eham
(http://www.eham.net/reviews/detail/1901?ehamsid=5b1a520fbea9e2b8bd6ae5e4655c3

47e) the kit was available as of Sept. 2002. Of course, with Cushcraft, that
is not a guarantee. I'll try calling (ringing across the pond can be pricy,
I know) and see if I can get an answer. They don't list the kit yet on their
manuals page
(http://www.cushcraft.com/amateur/support/instruction-manuals.htm) but they
do refer to it in their latest MA5V manual.

Cheers;
Andrew

2002. Just got my FT650 back!

Yahoo group: 6meter (2000 — 2003)
Date: 2002-11-25 13:32:57 UTC
From: Chris Love
Topic: 2002 Message: 2002

Hello Jamie: I couldn't be happier! When I got out of ham radio 7 years ago I sold my Yaesu FT650 to a good friend. We just did a bit of horsetrading and since he recently picked up a Yaesu FT920, I was able to get him to let go of the FT650. This may not seem any sort of big deal BUT, the FT650 is hands down my favorite radio of all the radio's I've owned. I've had some great times on 6 meters & in my humble opinion the FT650 is the Rolls Royce of 6 meter rigs. I know there are some great 6 meter rigs available in todays market but the FT650 is the only modern transceiver I've found that is capable of "Broadcast Quality" AM operation. I ran a 6 meter AM net for several years here is southern New Hampshire & the guys couldn't tell if I was using my Gonset G-50 or my FT650! Well I digress, Just wanted to drop you a note so you would know I'm not a spammer, just someone like yourself who is passionate about the 6 meter band. So nice to find a 6 meter group out here!

Hope to catch you on the air someday. 73 for now OM! N1OVB
When life hands you lemons... Ask for a bottle of Tequila & some Salt

Thanks for the info. I will keep a eye open. here is a link with a noise blanker mod. I found while searching for info. on the 650.
http://www.radiomods.co.nz/yaesu/yaesuft650.html I have a FT-620B and love it, but have not found any AM in my area. Enjoy....

Subject: [6 Meter Sked] Just got my FT650 back!

Hello Jamie: I couldn't be happier! When I got out of ham radio 7 years ago I sold my Yaesu FT650 to a good friend. We just did a bit of horsetrading and since he recently picked up a Yaesu FT920, I was able to get him to let go of the FT650. This may not seem any sort of big deal BUT, the FT650 is hands down my favorite radio of all the radio's I've owned. I've had some great times on 6 meters & in my humble opinion the FT650 is the Rolls Royce of 6 meter rigs. I know there are some great 6 meter rigs available in todays market but the FT650 is the only modern transceiver I've found that is capable of "Broadcast Quality" AM operation. I ran a 6 meter AM net for several years here is southern New Hampshire & the guys couldn't tell if I was using my Gonset G-50 or my FT650! Well I digress, Just wanted to drop you a note so you would know I'm not a spammer, just someone like yourself who is passionate about the 6 meter band. So nice to find a 6 meter group out here!

Hope to catch you on the air someday. 73 for now OM! N1OVB

Hello All,

This weekend kc8skk will be in em88.
We will be mobile starting the morning of 11-29 til 12-1.
We will be calling cq on 50.125 or 50.150usb on top of the hour and
at 30 past the hour.
We will also be on 10 to 160.
Hope to catch you on six.

From: James
Topic: 2008 Message: 2008

http://www.eham.net/articles/4317

RadioShack -> Silent Key for HAM Radio
Loren B. Cobb (KD7PLU) on November 27, 2002
Add a comment about this article!
After spending many, many dollars on IC Circuits, Resistors, Wire, Et al . . My the writing on the wall finally came clear when I asked some direct questions: 'You're out of Zeners and 2200uf Caps. When will they be re-stocked? And why don't you carry HAM stuff on the shelf anymore?'

I should have known when the HTX-252 went to 99 Dollars. Or when all the scanners were thrown under glass with big-red tags attached. But an open door revealed the 50 Ohm coax, packaged IC's and small transformers sitting in the back room collecting dust along with three full display panels of the like resting against the wall~ like tombstones of what used to be a Ham radio mecca.

'You got questions, we got blank stares . . .' This used to be the statement we all fondly remember after a trip to the shack. Now it's not so easy to live with. "We're not going to carry that stuff anymore. It's all been discontinued, and we'll probably start discounting it as closeout as soon as we have room."

No need to count the miles of register tape, but I'm positive my local RatShack has sold more loose components and parts to me alone to defend keeping the asile in-place and well-stocked! Now I'm thrown from the bus to make room for consumer electronics, cell phone accessories and DVD-VHS combo players! I'm mad. I feel my customer value and loyalty to the shop has been violated. They have taken a broadband selection of loyal patrons and spit them out like a watermelon seed on the sidewalk.

Why go back now? Catch a few deals? Hover over the 'bargin-bin of once loved, never-ending (Until now) flow of 8-pin dips and voltage reglators?! Why bother? Time to start going to national and other large, online electronic parts resellers that still know and love the considerable amount of money that hams pour into research, projects, PS & Amps . . even breadboards that do nothing but make good smoke-generators.

I'm sad to see what I feel is an end of an era. Another massive blow to our hobby, and a very clear indicator that the river of new hams will soon wither to a desert wash. We sat on our cans, we didn't go out and show-off the hobby, we didn't elmer the kid that asked if the HT was a scanner or phone. No- We just smirked and walked on. Too busy, to elite, too bothered by those who are green or un-aware of the complex, inter-workings of their own electronic world. We are the blame. The customers we could have programmed into buying things from our nook of the store are now going directly to the PILE of cheap RC-Cars and over-priced, plastic cell-phone covers with blue LEDs.

This infighting between old-school sparks and no-code techs; or the CW/No CW debate has got to end. We're standing by as 440 turns to liquid, our ATV channels are up for bid and everything above 800Mhz is a grab-bag for LD carriers to lay stake and slowly flood into our spectrum.

Go ahead and recon the sales coming up at your local shack. But do us all a favor- bring a young person with you. And when you get home, show them some very simple projects that will at least prime the well so we're not sitting on hill-tops using flashlights to communicate instead of radios in five years.

I work at "the Shack" part-time (now retired). Unfortunately, you are correct in any assumptions about their parts business parts....it will 'go away'.
My suggestion to customers is that they check out Mouser.com, Newark Electronics (only as a last resort), or a few others.

Happy Thanksgiving!!

Topic: 2009 Message: 2010

After Ed Juge left, (who was THE ham & a Sr VP at Radio Shack),its been heading downhill there....Ed btw is retired and living in New Mexico.. but actually small parts sales are down EVERYWHERE.....and Im surprised Mouser and Digikey and others still carry them....with SMD parts and LSI chips being the standard today, there is no call for DIP ICs anymore much less the standard caps or resistors!

Broadcast electronics and telecom gear is probably the only thing keeping standard size parts around....but I wonder how long before they minaturize as well? Its a fact of life nowadays..but sad as well!

Chris
WB5ITT (30 yrs in Feb 03)
Telecom egr/tech for 27 years
Broadcast engineer for 25 also!
and part hoarder of RS parts since 1974; my mom said I had half of RS in the den at one time :)

2012. Re: [6 Meter Sked] Just got my FT650 back!

Yahoo group: 6meter (2000 — 2003)
Date: 2002-11-30 04:29:32 UTC
From: yaichaboo
Topic: 2005 Message: 2012

The FT-620B is a great little rig. That's the rig my buddy had until he got my FT-650. He sold the 620 after he got the 650 & later on he told me he wish he'd never sold it. I suppose we should never sell our radios but if we hung onto all of 'em, imagine what our shacks would look like! ;)

Finding a used FT-650 is rare. I think there's several reasons you usually don't see them for sale on the used market. They were a rather expensive rig, I paid about $1700.00 for mine from HRO about 8 years ago. A lot of money for only 3 bands! IF you find a used one in good condition, buy it, you won't be disappointed!

As far as AM operation goes, if there's none in your area you should see if you can get some AM activity started. I've been away from radio for a while so I don't know how the band has been lately for openings. I remember one Saturday night while I was running the "Old Buzzards 6 Meter AM Net" the band opened up & people started checking in from all over the country. That was one of the longest nets we ever had and one of the most enjoyable.

Right now I only have a dipole connected to the FT-650 but I leave it turned on and set to 50.125 usb. If I hear activity there I'll see if I can make a few contacts then I'll move to 50.400 AM and go for a few more contacts. Those times I don't have the 650 on 50.125 I tune into 50.125 on the IC-R75 receiver. Whenever I'm in the shack there's at least one rig monitoring 6 meters.

Hope to have a 5 element Cushcraft up on 6 real soon & here's hoping for some excellent band openings on 6 meter for all to have fun.

TNX & 73 4 now - Chris - N1OVB

Lets face it...it is a sad day, if RS is closing its parts department. But my experience with them has been that their selection was spotty, that it was just "pot luck" as to whether they had a part or not, and 99% of the time the employees had no idea what the parts even were. They have lost out to next-day delivery of parts ordered off the Internet, and I'm surprised they lasted as long as they did.

2014. 6 meter ant.

Yahoo group: 6meter (2000 — 2003)
Date: 2002-12-01 22:37:22 UTC
From: Ed
Topic: 2014 Message: 2014

Hi all. My current ant. I use for 6 meters is my 160 meter dipole. It loads very well with a 1.1:1 SWR. Now I get out very well and get very good signal reports BUT I can't hear all that well, even if I turn my Pre-amp on. By the way the rig is a IC-756 (original). So then I got the idea of putting up a dipole just for 6 m. I did. I could hear very well, but I could not get a gud signal when the bands where open. Does anyone have any 6 meter plans to build a great DX ant. but I have no place for beams, so verticals or wire antenna plans would be nice. Thanks es best 73's

A 160 mtr dipole on 6 is a multiwave antenna...will have LOTS
of gain BUT also will have LOTS of NULLS!! Deep Nulls between the
lobes....for best overall use, a yagi or dipole OR crossdipoles/
turnstile would be best...for both local and DX..

> then I got the idea of putting up a dipole just for 6 m. I did. I
> could hear very well, but I could not get a gud signal when the bands
> where open. Does anyone have any 6 meter plans to build a great DX

When the band is open, any antenna will work fine....for LOCAL
6m SSB coverage, you want to stick with a HORIZ antenna...
Verticals will work with DX due to the signal rotation and the
polarization will be random at the DX end...but for local operation,
having the antenna in the opposite plane will cause a 20+db loss
in signal...and thats a 100:1 difference...

Probably best for you would be a turnstile/crossdipoles..
you can stack them for gain...OR add a amplifier if you need
MORE signal out but can hear ok....

How much power are you running now?? I am using 25watts myself
and a crossed Vertical/Horiz dipole antenna...for both FM and SSB..
have worked plenty on it and gotten great signal reports.

Mike,
How big is the loop? if its not to big I could put it up some where.
I might be getting up a tower here in the future so that might help.

Chris,
Well I am running 100 watts here on 6 mtrs. I have been looking at several antennas and the are either to big or too complex for me to build as I have never built an antenna except my dipole. The band was open and I tried both ant. and the 6 mtr dipole got weak reports and the 160mtr one got great reports. so I don't know. 73's Ed KG4LFZ

2020. Question about Beam antenna's for 6

Yahoo group: 6meter (2000 — 2003)
Date: 2002-12-03 09:40:35 UTC
From: larry fields
Topic: 2020 Message: 2020

Hello, I have question about 6 meter antennas,
mostly beams. I been contemplating on putting a 3 or 5
element on my overseas station, outside Cavite, in the
Philippines.
I been running a dipole antenna built by Daimond
W215S,<purchased in Japan in January at Akihabara>
which has performed like a champ. As I worked
Mongolia,India,China,Japan,SKorea, and of course Hong
Kong. On one small problem. Is TVI..|Seems That every
time I try to make a contact run..I get some comments.
Now my thought is to put up a 3 element or 5
element beam. Around 20 feet. But the question is will
this increase my TVI or would it really make it much
of a difference.
Any suggesions would be appreciated..

Thanks, Larry Fields,
n6hpx_du1@...

I've been using the Par Omni 6m antenna for the last 18 months as well and have logged 38 states and 6 countries from EN61 so far. It's between my Par 2m stacked omni on a 20ft mast. Higher=better=less TVI from emissions off the yagi. Bunch of designs on the 'Net, and if you wander back to Akihabara, look for the MasPro 6M 3 ele beam. If you're emitting from the station (as opposed to the antenna...i.e., an RF leak in the rig) you will not drop TVI by much.

My rig affects the house TV, but nothing now from the neighbors since I've gotten the antenna up in the air aways. As my shack is on the second floor, I've opted for a good DC/AC ground and a few 6M counterpoises in the storage area behind the rigs. Tried a bandpass filter, it helped some, but much less than putting the antenna as high as possible.

Hope this helps!

You can get then in different sizes. A 1/4 wave loop is not very large at all. It would work great on a push up pole or R/S tv mast.. Mike

2025. Thanks on the response for the Beam

Yahoo group: 6meter (2000 — 2003)
Date: 2002-12-03 15:13:55 UTC
From: larry fields
Topic: 2025 Message: 2025

I put radio shack HIPASS filters on my own sets an
that seemed to help alot as my son noticed no signals
coming through<like before>.
I probably won't be getting back to Akihabara for
awhile as I am on a ship headed to Okinawa and then
Guam. But my thoughts were looking at the Cushcraft 3
element beam. My dipole has been putting some signals
on the neighbors set,but I found out through my
friends its only because they watch TV channel 2
during the daytime.
Propagation for Japan to Manila has been running
between 0800 and sometimes a little later, worked
about 130 Ja's on one pass,along with VR, and 1 VU2.
Occassionally BG, but the real good one was the JT1.
Will look into a few beams, an I plan to put it up
around 20-25 feet. The leakage on mine I can't figure
out as were on Cable, but my wife<non ham> thinks its
because the dipole is very close to the cable system.
When I reinstall the new beam I plan to move the
dipole. I am also running 2 G5RV's about 50 feet, an
only get occassional TVI on high bands,like 10 and 12
meters..may install a Tribander in the future.

again Thanks, an 73's from
Larry Fields, n6hpx/du1=mm

Yup...coax does not have 100% shielding. Keep the feedlines away from cable! You will also be happier...my biggest problem is a huge birdie right on 50.110-113 from the colorburst osc. in TVs. I've terminated all the other cables in the house, reduced RFI by quite a bit (i.e., the wife no longer threatens my life when I xmit). Now, if I can just get rid of the cable TV leakage!

Take care on the USNS Concord....and don't fall overboard!

Cheers!
Andrew

2029. New Callsign

Well the DX Group is now over a year old and its been a good first year. As of the time I'm writing this the group has 391 members. We have had over 400 during the fall but quite a few were spam bots that I've had to remove.
I would like to thank each of you for a good year. Not often can a list owner run this big of list and not be plagued with headaches. But all you have made my job as moderator and owner very enjoyable. I am looking forward to another good year of fellowship, DX, and fun. And just remember, that it is because of each of you this list exists and has had the success it enjoys. From the bottom of my heart I would like to thank each of you.

2037. Re: [6 Meter Sked] 6 meter ant.

Yahoo group: 6meter (2000 — 2003)
Date: 2002-12-04 04:08:52 UTC
From: cboone@earthlink.net
Topic: 2014 Message: 2037

Put it on METAL pipe....its designed to be DC grounded (helps with
static and lightning protection!).....and ground the pipe!! On 6,
every little bit helps and static noise is something you can
eliminate with a DC grounded antenna....but dont use PVC..

2038. Channel 2 Notch Filter?

Yahoo group: 6meter (2000 — 2003)
Date: 2002-12-04 13:53:03 UTC
From: jchutch02492
Topic: 2038 Message: 2038

I live near a number of broadcast towers, including one for TV channel 2. Any suggestions for notch filter circuits?

Thanks.

Joe, KB1CJ

Hi, I was just wondering, for all those who own the Par OA-50 Loop ant. Whe you get the ant. and put it together, how do you , or do you even have to adjust the S.W.R.? thanks Eddie KG4LFZ

2047. Re: [6 Meter Sked] 6 mtr Par Loop

Yahoo group: 6meter (2000 — 2003)
Date: 2002-12-08 16:19:51 UTC
From: Robert Klaus
Topic: 2047 Message: 2047

It has a sheet with basic dimensions for various frequency's. I just adjusted mine for the lower range and put it up. It would be better with any antenna to set SWR with a meter before you mount it, but this worked fine for my application of it.

2048. 6M AM Broadcast

Yahoo group: 6meter (2000 — 2003)
Date: 2002-12-08 17:45:31 UTC
From: Ken P. Eckel Jr.
Topic: 2047 Message: 2048

last night pointing NW from EL29, I monitored an
AM broadcast that sounded like some sort of radio
talkshow. I did not get a station ID for the QSB. The
signal was on 50.170 AM mode.

Anyone know of some talkshow format bulletin broadcast
on 6M? Anyone ever intercept some harmonic of AM broadcast
on 6M. There was a no video sync sounds so I doubt it was TV.
The signal was broadcast quality AM but not as wide at I would
expect a broadcast signal.

Ideas?
Ken AB5A

From: George Matyaszek
Topic: 2047 Message: 2050

Ed,

I've owned the Par OA-50 loop since June 2001. Over all, it's an
excellent antenna.
The only limitation is that it's rated at 150 watts. From time to time,
when it rains, the
SWR has gone a bit on the high side. But, I suspect that's another
issue not related
to the antenna. I also run the Par 2m stacked omni with absolutely no
problems with it.
Right now I use an MFJ 6m tuner to compensate for high SWR on the Par
6m loop.
I'm using an Icom 746 usually running about 90 watts. During the last
18 months, I've
worked 38 states and 6 countries (including the Isle of Skye, Scotland)
from
EN61, Chicago, with the Par 6m loop.

From: Jamie R. Dean - W4JRD
Topic: 2047 Message: 2057

Not sure if there is a fixed calling freq for CW. Most folks I hear use the 50.125 along with the sidebanders. I have a list of all commonly recognized calling freq for VHF/UHF/Ghz on my web site at http://www.jamierdean.com/radio/ These are the calling freqs recognized by the FCC and ARRL.

2058. Re: [6 Meter Sked] 6 mtr Par Loop

Yahoo group: 6meter (2000 — 2003)
Date: 2002-12-09 13:00:06 UTC
From: MadDrewski@aol.com
Topic: 2047 Message: 2058

Eddie....I've run a PAR for a bit over a year. Works quite well. I used an MFJ259B to set mine up after mounting it, tunes in nicely at 50.125 with a 1.2:1 VSWR. I also use it w/6m repeaters using a tuner. Yes, I lose efficiency, but I don't have to have two antennas up. I've also got a Cushcraft A3S-50, but can't put it up at the house. I use a mast and carplate for remote ops (mountain-topping). The yagi is preferable, if you can have external antenni. The big advantage with the PAR is that I can mount it atop the chimney and have had no complaints (the wife didn't even see it for 3 mo!!!).

As for assembly....if there is an easier to assemble (horizontal) antenna out there, I'd be surprised. The guys that build it (in NC, to boot!) designed it to go together fast and be easy to adjust. I have about 3/4 inch showing on the back side of the main bar, that gives me a good VSWR on the SSB calling freq. Recently saw one on eham or QRZ for around $50 shipped. Even if you have a beam, the PAR is good to have for omni work and/or general monitoring on 6.

Cheers!
Andrew

==========

Here's my experience from about 20 years ago: There was/is a group of high
powered AM'ers on 75 meters---U can sometime hear them today--high fi audio
etc--
Anyway I'm tuning across 6 and heard this faint AM signal---Yes, you guessed
it---One of the 75 meter stations based near Philadelphia had a harmonic on
6!! Not bad considering I am 100 miles away.

YES ! Just got it setup this week.... I am using a Yaesu 847, Rascal soundcard interface and a laptop. Antenna for 6m is a Par Omni Loop at 35'. There is a VHF MS contest on this weekend.. I have worked 6 6m stations so far.. 5 grids all using FSK441 mode. Details on contest are here : http://www.qsl.net/wa5ufh/Rally/DecContest.htm Heck, with MS, 6m is NEVER a "dead band". 73, Tom VA3NFA FN25 --- Dennis Kaylor wrote: hey guys

Since the IC-706mkIIg died I'm stuck with an Icom IC-T90a HT doing 5 watts Fm on 6. It's not much but with my Cushcraft AR-6 it is possible I could work some DX. I wish the band would open so I could try. I'm dying to get another 100watt SSB rig on the air. Maybe after we get the Christmas bills caught up I can get back on 6 meter SSB. But if any of you travel in North Carolina for the holidays, if your on I-40 around the 101 mile marker turn over to 52.525FM and give me a shout.

2075. Yaesu FT-650 for sale on eBay

Yahoo group: 6meter (2000 — 2003)
Date: 2002-12-18 00:31:26 UTC
From: yaichaboo <yaicha@gsinet.net>
Topic: 2075 Message: 2075

Hello to All! I was poking around on eBay & found a Yaesu FT-650 up for auction from a fellow over in the United Kingdom. If I didn't already have one of these rigs, I'd jump on it. These are a great rig for 6 meter operation. The only solid state rig that I know of that can sound like a tube rig on AM! Nothing beats "Broadcast Quality Audio".

Anyhow, if anyone is interested in looking into this rig it is item # 1944737552 & there is just under 3 days left on the auction.

Good Luck & 73

Chris - N1OVB

jamie
you sound as pathitic as that little crippled boy in that old song
called teddybear

why dont you get the 706 fixed shouldnt cost more than what you could
sell the T90 for
see ya later

Jamie R. Dean - W4JRD wrote:

>Since the IC-706mkIIg died I'm stuck with an Icom IC-T90a HT doing 5
watts Fm on 6. It's not much but with my Cushcraft AR-6 it is possible I
could work some DX. I wish the band would open so I could try. I'm dying
to get another 100watt SSB rig on the air. Maybe after we get the
Christmas bills caught up I can get back on 6 meter SSB. But if any of
you travel in North Carolina for the holidays, if your on I-40 around
the 101 mile marker turn over to 52.525FM and give me a shout.

Wade,
I had to part with the broken 706. I needed to be on the air some way
and I did some horse trading and got a Icom IC-V8000 and an Icom R-2 with
all the programing software and cables. So since the repair was looking at
$300 I guess I did ok. Anyways I kept the UT-106 DSP unit out of the 706 and
used it in my Icom IC-718 I use for MARS. I feel I got the better deal. But
to beat all I was honest with the guy I traded to. (Had to be he lives about
100 feet from my front door)

Hi there,

I am looking for a good, smallish-sized SSB rig for 6 meters, as well as space-saving antenna configurations that I could purchase already built. Cost is not as much of an issue as is small size. I already have a 2 meter/70 cm base rig and I'm also looking for an HF rig for when I upgrade my license (I would also be interested in hearing about any combo HF/6 meter rigs that you folks like).

I'm too new to this so I don't want to attempt to build my own antenna at this point. Would a vertical work for 6 meters for DX, or do I need something horizontally polarized? What has given you 6 meter DXers good solid performance in terms of rig and antenna?

Thanks much!

Jackie

Eddie,
So far I love the V8000. I love the extra 25watt. I went ahead and added the DTMF tone board to the radio. Not sure why I needed the board but I like to have all the features I can afford. My only 2 complaints about the rig is, since I use it for a base radio the mic cable is to short. But I found out that standard cat5 cable with ends will make a nice cable and you can run it as long as you like. My last complaint is the fan is loud. I guess that is because it is external mounted. But loud or not it is very nice to have a fan on a 2 meter mobile. I can say the being an Icom fan (I own the IC-2100H, IC-V8, IC-T90a, IC-718 and the IC-V8000), I would defiantly recommend this v8000 to anyone looking for a great 2 meter rig.

73 and Good DXing,

Jackie....look around for the Alinco DX70TH model rig. The -TH has 100W out
on 6M (the straight -T is only 10W out but still a good rig) and 100W out on
HF (as well as a decent GC receiver). For the antenna, look at
www.parelectronics.com and check out the omniangle antenna. Works well and
is quite small. If you would prefer a beam, M2 and Cushcraft both have good
smaller antennas. Check out the reviews on www.eham.net for the antennas and
the Alinco. Kenwood has a couple of 6M/HF rigs also, but the prices will be
higher. Bought an Alinco DX70T several years ago for $450, the -TH should be
in that range or a bit lower today.

Hope to hear you on 6 or 2M SSB!
Andrew

Andrew,

With all due respect, you can't be serious. The IC-706MKIIG far outclasses the Alinco, costs only $20 more than the DX70TH ($779.95 for the Icom vs. $759.95 for the Alinco), and gives you so much more bang for the buck. DSP noise reduction and automatic notch filter, 160M to 70cm, 100 watts on HF, 100 watts on 6m, 50 watts on 2m, and 35 watts on 70cm. Couple that with a free separation kit until the end of the year, and you can't beat it.

The DX70TH was a great radio in it's day, but that day is long gone.

hello since its the holidays i thought i would offer this computer up to
best offer so someone could have a nice new computer for the xmas
holiday so if your interested please make an offer
here are the details of the computer

Celeron 800Mhz CPU with 128 Meg of RAM
40 gig Western digital Hard drive loaded with Win98se
HP CD burner
ECS mother Board with intergrated 3D sound /AGP Video/10-100mps Lan/56k
V90 modem
all in a mini tower case with a 250 watt power supply
also comes with a keyboard and mouse if needed
Keep in mind guys this is a new system not some beat up computer that
has been running 24/7 since it was turned on
thanks

I purchased a used Alinco DX 70 TH, with expansion kit
for about 450 and the radio works great for 6
meters....100 watts

the 706 mark II would be a better radio, but I did not
have the 750$ for new and I serious doubt if a 706
mark II would see below 500 used.....good luck...

I have to agree with choosing the Alinco DX70TH. It is a good small HF/6 rig. I bought mine from HRO last year. It was a return to stock and I paid 425 w/the factory warrantee. The ICOM 706mkIIg is also a good rig and you could get rid of the 2 meter/440 base as the 706 does it all. That can be had new from HRO for under 800 dollars.

I use a Ringo for the FM portion of the band and a pair of ham sticks (Iron Horse make a mount to do this) together to make a half wave dipole. You can run that set either horizontal or vertical and can even use a lightweight rotor to change directions with it. This is light weight and takes up little room.

In my opinion, the Yaesu FT100 or ICOM 706 will beat the Alinco, for about the same price if you are looking at the original 706 or 100. The NB is better on the 100, as is the receiver, but the transmit audio is better in the 706 series, in my opinion. Evertyhing I read says the Alinco noise blanker is worthless. There are sometimes a couple of mods necessary in the FT100, which is another negative, but I like mine better than the original 706 I had.
Good luck & 73,
Paul K4PDM

Serious as a heart attack. Only the Mk IIG has decent (i.e., better than the
-TH) receive on 6, and better check the prices. I've seen the DX70T sell for
$250......show me an orig. 706 selling for that (she was asking about used
radios, IIRC)! She also said that she already had 2M/432 capability, she
wanted 6M capability and HF. The Icom is a GREAT little rig, no doubt!!
However, if you are concerned about $$, the Alinco is more bang for the buck.
Easier to use mobile, too (this from a friend with the FT100D, the Icom 706
Mk IIG and an Alinco DX70TH, all in different vehicles). So....depends on
your app and location of the rig. Many turn down that rig just because it is
an Alinco. Darn nice little rig, they're making a mistake.

Read the reviews on eHam, too.

Paul...stay away from the orig. FT100 unless you speak Japanese and have a
few friends in Tokyo who can get transistors. Do a search on the finals for
that rig and you'll understand why I say that...transistors are NOT available
for love nor $$. However, I DO like both of those rigs....the Icom seems a
bit less intuitive on programming (I've also got the FT736R & had an FT100,
so used to Yaesu prog. steps) but the 706 has better finals and seems to be
better than the FT100 in that area (FT100 has a MUCH hotter receiver on
VHF/UHF, to me). The new versions of both rigs seem great....but IIRC she
was asking about economical solutions. I'd love a new MkIIG....but not in
the cards for awhile yet!! As for noise blankers, the Alinco NB is marginal
at best....but it takes the DSP of the latest MkIIG to handle the noise in a
friend's Expedition....and it still runs S5+ on several bands, even after
major noise abatement program here at the QTH. Glad I no longer have a Ford
for the company vehicle...the Taurus I had before was a pain! Thus said, the
NB could be better in the Alinco, but it does not make it into a poor radio.
"If ya got the $$, get the Icom."

Partial correction....it has memories, but you are correct on the PL
tones.....they did get cheap there!! Of course, I've had exactly three QSOs
in the past year on 6M FM; seems quite dead here in EM96.

I was looking into that one to use as a base rig, but I ended up buying an FT-90 for 2 meter / 70 cm for that purpose (nice and small).

I wanted to get two separate radios for VHF/UHF and HF, because if one goes down, I'll have the other to use.
The MKIIG is a great radio and very popular for many reasons, but I don't need its VHF/UHF capabilities (save for
6 meters). It would be redundant and more radio than I need for HF/6 meters. I have also had these suggested to me: IC-746, IC-736, IC-756 and Kenwood's TS-790 (if I could find any of these used).

If I end up buying something like the MKIIG or combo HF/VHF/UHF rig, I will if I can find a good deal on an excellent radio, but I really don't need 2 meter- 440 MHz and would like to stick with HF/6 meters if I can.

It was suggested to me (not on this forum) that I should stay away from Alinco products due to their very small market share and it's hard to get them serviced. I don't know if this is true or not.

I have an IC-746. Great radio. Should be available used for around
$750-900 depending on condition and what options are included. Ebay is
probably your best bet.

If you're looking to spend that much cash, look at the IC746...great rig.
The 736 is a bit long in tooth....but still a good rig. 756 is pricey.
Kwood 790 I have no experience with. Expect to drop a grand to get the rig
and decent accys for the 746. I heartily agree with the other posters about
antennas....my cheapie trip radio (MFJ 9406) works like a champ into a 4 ele
yagi fed with 9913. Get GOOD feed lines....stay away from RG58U, even for
jumpers. Go with RG8X if you need small dia. jumpers.

Didn't you mention that you wanted a mobile rig? IIRC the initial
conversation was more for mobile. The 746 can go mobile....but if you need
both fixed and mobile capability and have a grand to spend, do look at the
706 MkIIG then. Great rig, but you'll spend a bundle getting it set up for
HF mobile if you want a screwdriver antenna vs. the Yaesu. However, I
believe the Icom is the better of the two rigs (until Yaesu gets their QC and
finals problems straightened out!!)

--- MadDrewski@... wrote:
> > Paul...stay away from the orig. FT100 unless you speak Japanese and have a few friends in Tokyo who can get transistors. Do a search on the finals for that rig and you'll understand why I say that...transistors are NOT available for love nor $$. However, I DO like both of those rigs....the Icom seems a bit less intuitive on programming

I have had a FT100 for about three years now and the finals are still working, but I admit I don't transmit a whole lot! The noise blanker is superb, though. And although it might just be luck, I never heard a signal on 6 meters with the 706 I had, and the FT100 hears signals every week, even hooked to a 17 meter hamstick!
I guess everyone knows about the new FT857 that is about to come out, evidently the replacement for the FT100D...

The classifieds on eham.net, qth.com, and the ARRL website are more in keeping with tradition as far as ham-to-ham selling. Much more personal and friendly. As far as ebay is concerned, how in the world do so many non-hams get ahold of ham rigs? And why??

You can buy a 746 from a dealer with a 90 day warranty for about $900.

I have heard this same advice given over and over. Must be true. Well, when I purchase my rig/antenna/coax/feedline, I will keep that in mind.

Thanks for the advice everyone!

J.

> Didn't you mention that you wanted a mobile rig?

Not for mobile use, just a smallish HF/6 meter rig because I don't have a lot of room to work with where I'm going to be setting up.

I'm leaning towards the FT100's or MKIIG, even though I really don't need VHF/UHF capabilities. I keep hearing great things about the MKIIG- it's small, and the price is certainly right.

2126. Re: [6 Meter Sked] Work FM or repeaters / opening

Yahoo group: 6meter (2000 — 2003)
Date: 2002-12-19 23:54:30 UTC
From: WB4IGU@aol.com
Topic: 2126 Message: 2126

I have been hearing double hops to ca but not as high as 52.525. my only contact on 52.525 was with a Tn station from my qth here in Va fm18

2127. Re: [6 Meter Sked] Recommended 6 meter SSB rig?

Yahoo group: 6meter (2000 — 2003)
Date: 2002-12-20 00:50:21 UTC
From: James Carlin
Topic: 2081 Message: 2127

ANYONE can get anything they want if they have the money to buy it. This includes ham radios. When was the last time you were asked to produce a license at a hamfest before buying a radio? I have bought radios (used and new) at no less than 3 different hamfests in FL and not once did any dealer express an interest in seeing a copy of my license before taking my cash (or credit card). I suppose people get their illegal drugs from ebay as well??

-- James KF4OUI

The classifieds on eham.net, qth.com, and the ARRL website are more in keeping with tradition as far as ham-to-ham selling. Much more personal and friendly. As far as ebay is concerned, how in the world do so many non-hams get ahold of ham rigs? And why??

2128. 6 meters on an HT- hopeless?

Yahoo group: 6meter (2000 — 2003)
Date: 2002-12-20 00:56:30 UTC
From: Jackie LaVaque
Topic: 2128 Message: 2128

Hey there,

I have a Yaesu VX-5R and of course, the stock duckie with extension doesn't do anything for reception on 6 meters. While I don't expect miracles, I'm wondering if there is such a thing as a decent 6 meter antenna for an HT? I bought an MFJ 1712 telescoping antenna for 2 meters and 70 cm, but this doesn't help on 6 meters, and I'd like to see if I could find something in a telescoping antenna for 6 meters. I don't know if such an animal exists. If nothing else, I'd like to at least *listen* for when 6 meters opens. I do plan on buying a combo HF/6 meter rig soon, but thought I should try and make do with what I have now.

Thanks, 73

Jackie

2129. Re: [6 Meter Sked] Recommended 6 meter SSB rig?

Yahoo group: 6meter (2000 — 2003)
Date: 2002-12-20 01:23:54 UTC
From: James Carlin
Topic: 2081 Message: 2129

I own a 706 MKIIG and it is wonderful. I do not use it as mobile, I use it at home just as you plan to. I also thought "I will not need the 2 meter / 70 CM functions, I already have a dual band FM radio" - then I discovered VHF SSB!

Anyway I plan to install the 706 in my truck, but not before I get another HF-VHF for use in the house. Im thinking "Kenwood TS-2000" :)

-- James KF4OUI

Not for mobile use, just a smallish HF/6 meter rig because I don't have a lot of room to work with where I'm going to be setting up.
I'm leaning towards the FT100's or MKIIG, even though I really don't need VHF/UHF capabilities. I keep hearing great things about the MKIIG- it's small, and the price is certainly right.

From: A10382
Topic: 2081 Message: 2131

We had quite a thread about this subject (selling radios without asking for a copy of the buyer's license) on another list I subscribe to. It actually spiraled out of control into an e-flame event,

Personally, I've found that many of the eBay sellers just play dumb.. acting like they know nothing about nothing - even to the point of intentionally using poor grammar and little or no punctuation. Although it's pretty easy, it does take at least some amount of computer savvy to sell on eBay.

I've seem folks play 'dumb', but then have 200+ amateur radio related items listed for sale .. practically a full time business. Their listing usually contains something like "... from an estate sale... I know nothing about these..... selling this for a sick friend.... from my grandfather's attic...." Sometimes the 'play dumb act' is pretty comical.

The original poster to the 'won't sell a radio without a license' claimed to be working at a radio retailer and had taken it upon himself (not his employer's policy at all) to not sell a radio to anyone who could not produce a copy of their license. He even carried his 'policy' it to GMRS and BUSINESS BAND radios. The result is that most purchasers just asked for another sales rep... I don't expect this person to be employed there very long.

There is nothing in the regs (in the US at least) that require you to be licensed or have any sort of permit to buy, possess, sell, or even listen to a radio in any service. One of the benefits of our very 'open society' and something that I would NOT want to change. There are regs about not divulging what you hear or not using it for gain -- and I'm OK with those.

Changing this policy would require, in order to have it be enforceable, record keeping AND registration. I've seen this in place and practice in other countries -- all non democratic ones. The gun industry deals with this, adding about $50-70 to the cost of every gun for the paperwork. filings, 75 year federal record keeping retention policy, and the potential liability of record keeping lapses. Of course, the record keeping chain is broken on the first individual-to-individual sale, making all the work almost useless at times. The 'bad guys' either buy their guns 'on the street' or just steal them... so much for tracing it beyond the initial new-item retail sale.

The first thought about any 'radio registration' many of us might have is that it gives some future less-open society the ability to confiscate our then 'illegal radios'. Don't think it can't happen here. Some less-knowledgeable (but well-meaning) elected reps have proposed registering radios so the 'illegal ones' (ones capable of 'intercepting government communications') could in fact be registered and traced (and confiscated?). Notice the wording of the rather innocuous sounding activity of 'monitoring' to the insidious sounding term of 'intercepting' -- being done to garner public support for just such a policy change in the future. The proposals did not see the light of day outside committee mark-up sessions. It's amazing how 'anti-liberty' some liberals can be.

Frank

A license is not required to buy a ham radio only to use one. I know your next question is why would you buy something you cannot use. Several answers come to mind. A HF transceiver is a lot cheeper than a shortwave receiver and still don't need a licesse to listen. One more reason is wife.parents.girlfriend buys it to give for you as a gift. Does this really happen. A good question. Mike NH6CJ

I talked from Miami Florida to New York on 52.525 FM once! More frequently I have talked from Miami to the Carolinas / Tennessee area. Good luck on 6m FM!

PS for an antenna I used a copper pipe j-pole I made for $20. For comparison the longest 6m SSB contact I made was Miami to Argentina, using the same copper pipe antenna.

-- James KF4OUI

I have heard no response or activity on 52.525.
Has anyone else heard the opening up that high?
I would also love for some DX to work my repeater, 51.26 in, 51.76 out, PL 114.8

Any wire will work. You can even attach your HT to an external 6m antenna using the proper adaptor. Do not expect miracles, you will be limited to the world of FM - but you will be much better off than you are with your stock HT antenna.

Go read some of the reviews of this radio on eham.net and arrl.org

A lot of reviews included the fact that the stock duckies do little for HF and even 6M....

There are some 6M antennas from the likes of Smiley and a few other quality manufacturers that will enhance 6M performance. You would probably want a dedicated 6M antenna - not a multi-band one.

A good method of improving most HTs is to add a long counterpoise wire. Get a large eyed ring terminal and put it with a long wire (1/2wl) under the BNC antenna connection. Be sure the radio has a 'ground' at the antenna port - BNC and SMA ones almost always do. The Motorola screw in ones do not - the threads are rf 'hot'.

Topic: 2130 Message: 2139

Hi Jackie,

If the outer part of the antenna connection is ground, merely wrap a wire around it or crimp it to a ring terminal large enough to fit over the connector - then just screw the antenna over it.

The term is 'counterpoise' - same effect as antenna 'radials' in that it provided a better 'return path' for the rf. I've tried this on a few HTs and they do work a little bit better.. but just a little bit. You'll get more of an improvement on lower frequencies (like 6M or even CB HTs) than on UHF HTs that already have enough 'length' of return in the circuit board traces for the higher wavelength that operate at.

Just be careful not to short the rf conducting part to the ground side... that's not healthy for rf power amp components.

Frank

bunch!!!

Any particular type of wire? How and where would I hook it up?

Thanks! Jackie

well jackie
first off most of the activity on 6 meters is on sideband not FM which
is what the VX5R is you would be better off using it to talk on local 6
meter repeaters in your area if there are any
what you could do is make a half wave dipole mount it verically for FM
and tape it to a wall or something cause nothing you use as in a ducky
for 6 will work worth a flip
good luck

Jackie,

Try the MFJ-1720S. It's a "gain" antenna for HT's
with an SMA connector. It's very heavy, though,
and might break or significantly damage a weak
SMA connector on the body of your HT.

hey scott
the rig isnt bad a bit old now a days but good
as for antennas i would suggest either the M2 6M5X which is a 5 ele 6
meter yagi or the cubex 4 element quad
www.m2inc.com
www.cubex.com
as for verticals unless you which to play on FM there isnt much need for one
now on that 551D it claims to be an ALL MODE but watch out the FM board
was an option with it and the only way to tell is to look inside
another thing you want to get when you get your antenna is to buy the
very best coax you can afford i would suggest times microwares LMR400 or
beldens 9913f both are low loss and very durable
good luck and welcome to 6 meters

I didn't mean to be taken literally. I simply mean what are so many people doing with radios that they know nothing about, making erroneous and extravagant claims for, and selling with ridiculously high reserves and no warranty (but NOT DOA!!!) Why would they have them in the first place?

And now you can take me literally.

I am not advocating the changing of any laws.
I am not advocating the change of ebay policy.

I am just stating the reasons that I think hams are better served by
dealing with each other, rather than unknown sellers thru a faceless
website that has no knowledge or respect for the amateur service.

One of Pogos most famous lines is:
"We have met the enemy, and he is us!"

I won't speculate on all of eBay, just about the ham who lived across the street from me.
He was a retired OM with a metal building out back, one day while visiting his shack he opened the
door to the storage building to get a book he borrowed from me.
The building (14x16) was stacked to the ceiling with fine old Hallicrafter, Colins, Drake, ect.
There were Icom, and Kenwood too. He informed me that he dabbled on eBay.
UPS trucks come and go everyday to his house.
He never takes a decent radio to the local swap meet, twice a year.
He never tells anyone that he has these radios.
There must be over 100 rigs easily in that building and who knows at what cost!
How many other hams are out there...

While this is not the norm, I made a LOT of contacts on one opening running one watt into a rubber duck antenna while sitting in a metal sceened in porch! Anything is possible on 6!

I had this antenna and got good results from it, although, of course, the
"gain" on 6 meters is referenced to the stock antenna.
Mine did not damage the SMA, but the antenna ended up breaking after about
a year's use.

Radio is about two years old, came out as a qrp rig.
Runs about 10 watts on transmit, could be had with any two bands 160-6 M.
I would love to find one with 6M and 10 M, they were under $400 new.
Good on-board computer , good cw radio, if used with an audio filter.

Ken
for local SSB work, go with a horizontal antenna....that is the
best! A vertical will work during band openings but the true weak
signal guy will want a stacked turnstile or yagi (preferred!)
You can build if you like...they arent that hard to make!
This is true on both 6 & 2.....FM of course is vertical, choose
whatever antenna you want that suits your needs and pocketbook...
(a 5/8 wave 2mtr antenna also works as a base loaded 1/4 antenna on
6m with GREAT SWR...I suggest a Larsen NMO-150 for that!...dont cut
the whip and it will work fine).

Easy way to find out about the coax...put a dummy load or any 50ohm
resistor at the antenna end (replacing the antenna of course)...
See if the rig still doesnt like that..

Ken...if the antenna is tuned for the high end of the band, then you may be getting a high enough mismatch to cause the rig to ramp back power. As finals are not cheap, best to be quite careful and not run full output until you can figure out the problem. I assume you've an SWR bridge and that the rig also has sufficient juice going to it (13VDC@20A). Make sure your wiring can also handle the current...I run 6 ga for the main buss on my setup. DO CHECK your coax....finals cost more than coax. Use MINIMUM RG8X......I use Belden 9913 low loss. Avoid RG58U except for very short runs, esp. on weak signals work. (note: not saying that 58/U is bad...it is just a poor choice for 6M and up, due to losses.....and if you're buying coax, spend a few more $$ and get some very low loss coax....a good antenna and coax will make an old, tired radio sound good, and a poor antenna/coax setup will ruin a good radio)

The other comment about horizontal polarization is spot on. If you like homebrewing (shouldn't all hams??), try a halo (eham.net has the K0FF articles listed) or Cebik's excellent pages list several excellent designs (bookmark that page...you'll use it). I'm currently building a gain antenna, the HexBeam, from descriptions I've gotten off the 'Net. Bit more difficult, tho. A Moxon may also be a good choice on 6 and 2M.

Some areas to start will be the excellent references at eham.net and cebik.com. Commercial choices are quite abundant. I currently have three 6M antennas, two installed at present. A 3 ele beam is used at remote camps, the PAR OmniAngle is on top of the house (CC&R neighborhood, the PAR is small) and I have a halo up in the attic for general monitoring/testing. The HexBeam will replace the halo, eventually. Cushcraft has a good simple 6m beam, M2 has some excellent antennas, and there are lots of plans on the web. MFJ has a cheap antenna, it works but I've heard from several folks that it doesn't like wind and weather.

For 2M, a simple quad works quite well. I have a 5 ele. which I can barely rotate in my attic, but it works FB. Shoestring Antennas makes a good one, and you can build one in an evening with some PVC pipe and a couple of supports for driveway reflectors (fibreglas 1/4" rods...works great for antenna spreaders!!). If you can mount external antenni, go with a gain

antenna.....one of the Cushcraft boomer series can be found cheap....bought one for my brother for $20 at a recent hamfest. A TV rotator works great, as he is in an area which does not experience heavy winds.

Anyway, let us know if you have more questions, we'll try to throw a few answers and some help back to you!!

Cheers!
Andrew

well if you want a nice antenna i would suggest the cubex KingBeeII
its 4 ele quad on 6 and 8 eles on 2 meters its on an 8 foot boom
i can work all over the state of florida with it on 2 meters SSB with 50
watts with no worries
this antenna allows you to have 2 high gain antennas on one tower with
limited space
it may not do well up in the ice and snow
could also try the M2 6M5X which is a 5 ele yagi on a 15 foot boom and a
12 ele M2
good luck

Dennis,
What is the name of the chat room???? I don't see
anything that would go along with ham radio in there.

WHY do we need another chat room?? We have tons of remailers already
that send out msgs as soon as they are posted...I dont have time
for KB chat (one reason I never got into packet!! I prefer to TALK!
Ok ok, I would have made a good candidate for NOCODE...but then I
have been licensed for 30 years this Feb!)

Well if you don't want to use don't, but that doesn't mean others might not want to. That's the nice thing about ham radio there all kinds of different aspects and just because it doesn't interest you doesn't mean it doesn't need to exist so enjoy what you like and don't worry about the rest. 73 and enjoy Dave N8JMY

Seems like this chatroom maybe a good idea. I like keyboard to keyboard chatting which explains why I've loved packet radio since 1994. I do request that if you are gonna have a debate on whether or not we need the chatroom then please don't do it on this group.

From: K. Wise
Topic: 2165 Message: 2176

Thanx Chris...

Just got my rig back from one of the guy's in my club. I was uncertain if I had
bought a lemon or not...While he had it I went UP on the roof, Pulled it all down.
Cleaned the antenna, Replaced the coax (I had a spare in the closet), Put it all
back...1.5 on 147...1.2 on 146... and 1.7 on 144.75. OK that problem solved.

Now as for the DX antenna here is what he recommended. Use two Hamstick's
setup dipole configured. you get both at HRO. I was told I could do it for less
than $50..

How does that sound??

As for the test we worked 3 western states :)

I was concerned I got the rig off of EBAY...

Ken
for local SSB work, go with a horizontal antenna....that is the
best! A vertical will work during band openings but the true weak
signal guy will want a stacked turnstile or yagi (preferred!)
You can build if you like...they arent that hard to make!
This is true on both 6 & 2.....FM of course is vertical, choose
whatever antenna you want that suits your needs and pocketbook...
(a 5/8 wave 2mtr antenna also works as a base loaded 1/4 antenna on
6m with GREAT SWR...I suggest a Larsen NMO-150 for that!...dont cut
the whip and it will work fine).

Easy way to find out about the coax...put a dummy load or any 50ohm
resistor at the antenna end (replacing the antenna of course)...
See if the rig still doesnt like that..

Chris

Date: 2002-12-30 03:55:25 UTC
From: K. Wise
Topic: 2177 Message: 2177

I suppose I should have told the group I live in a apartment...
My landlord is just sooo nice to let me have what I have...I will be
stretching his good will by going this far...

Subject: Re: [6 Meter Sked] Greetings

well if you want a nice antenna i would suggest the cubex KingBeeII
its 4 ele quad on 6 and 8 eles on 2 meters its on an 8 foot boom
i can work all over the state of florida with it on 2 meters SSB with 50
watts with no worries
this antenna allows you to have 2 high gain antennas on one tower with
limited space
it may not do well up in the ice and snow
could also try the M2 6M5X which is a 5 ele yagi on a 15 foot boom and a
12 ele M2
good luck

From: cboone@earthlink.net
Topic: 2168 Message: 2178

Ahhh, but since when is a Internet Chat room part of ham RADIO???

(sarcasm mode heavily on :)

Dave Kaylor wrote:
>
> Well if you don't want to use don't, but that doesn't mean others might not want to. That's the nice thing about ham radio there all kinds of different aspects and just because it doesn't interest you doesn't mean it doesn't need to exist so enjoy what you like and don't worry about the rest. 73 and enjoy Dave N8JMY

2179. Re: [6 Meter Sked] Greetings

From: cboone@earthlink.net
Topic: 2165 Message: 2179

Sounds like the radio is ok!!! As for the two hamsticks.....
well that will make a simple dipole...but a dipole is a figure
8 pattern with the nulls in-line with the dipole.....for general use,
I would put up a PAR antenna (stacked preferably....you get OMNI gain
that way! :) or a turnstile (crossdipoles) properly fed (2-more bays,
even better!)....all depends on what you want and what you can afford
OR build!! Take a look at the PAR antennas if you want to buy...better
value than two hamsticks in my opinion.

Topic: 2180 Message: 2180

With you being in an apt, then the PAR is the best way to go...
easy to install, easy to stack for gain.....and not as noticable
as two hamsticks in the air as dipoles....(and no need for a rotor!)
Some apt landlords are real good and nice...if you dont abuse it!
(Ive had some in the past where I could do that....now Im in a house..
but still renting...luckily, no problems...)

From: Dennis Kaylor
Topic: 2193 Message: 2194

i have no idea what kind of fuse it is its a glass fuse with silver caps
but its only about half as long as the typical fuse

The voltage and amperage ratings of the fuse are normally etched into the sides of the silver connectors at either end of the fuse.

Remember since it is going for a radio to get a fast action fuse not a slow blow. But even if you take the fuse to the local auto parts store they will be able to help you if it is a 12v (13.8v) fuse.

Dennis....have one here, if your unit is a GMA format fuse (just a hair over 3/4" long). That is the European format fuse, much used in Japan (and now here). I've got one....if you want, I'll toss it in the mail tomorrow for you. If you have a parts house nearby, ask for a GMA 10 fuse...they should know what that is. If not, email me and I'll get this one out.

But... did you fix the problem that caused the fuse to pop in the first place ??

Fuses have been known (very occasionally) to 'age' -- due to vibration, running at just below power rating, or even corroded solder connections within the fuse... I put together a few maintenance schedules for military electronic hardware where we required the portable and backup batteries (Nicad) to be replaced every 12 months and all fuses to be replaced every 5 years in stationary devices and every 24 months in any mobile or portable devices/

Fuses in a desk top/bench power supply should really last a very looonnnng time...

Frank

The visible condition of a fuse can tell you much. If it is a glass fuse and is 'blackened' inside it was a heavy surge or a short-circuit exists. If the element merely 'parted company' it could be due to vibration or a fact that aging components caused more current to be drawn.
If the latter occurred increase the fuse value by 50% and observe any overheating or discoloration of components.

From: Dennis Kaylor
Topic: 2193 Message: 2201

just so everyone knows
this is or was at the time a new power supply so thats why i suspect the
viberation of riding in the trunk of the car caused the fuse to fail
and i dare anyone over the age of 35 to SEE if a 10A fuse is blown or
broke the filiment is to fine and thin its tough to see
the fuse holder is mounted on the PCB and next to it it says Fuse 10A 250V
and as for radio shack they dont carry the short fuse all they have in
the 10 amp is the standard fuse

Hi Dennis, It sounds like an 8AG fuse. If radio shack can't help you call Astron. They are very helpful. That will solve your problem.
By thee way, do you have the CD drive for the laptop I bought?

Someone has probably replied by now (haven't been able to check email in a
week!), but if all you want is a dipole, cut some wire to length and
solder on a piece of coax. You could do that for less than $5, if you have
the coax!

From: Lee Lininger <karlee@cco.net>
Topic: 2211 Message: 2211

Hello to the group.
I am looking for the IC EX-106 fm module for an IC-551 6 meter rig.
Does anyone know where this item can be found? I have already talked
to IcomAmerica in Bellevue, Wa, and they do not have them. Maybe
someone has a 551 or 551D that is broken and would be willing to sell
the module. OR, maybe one of you might know of a radio "used parts
store" that might have this module.
Thank you and 73,
Lee KD7IBK

hey lee
you sure picked a rare thing to want rhe 551 is rather old over 20 years old and made before there was a lot of action on 6 FM so there wasnt a lot of need for the FM board so most hams who bought the 551 didnt spring for the optional FM board so needless to say there are not a lot on the market if you really wanted to work FM you would be better off buying an azden pcs7500 or something cause you will have to be very lucky to find someone who will part with the FM board
good luck

Hello Dennis,
I got the IC-551 as part of a package deal that included 2 Cherokee 50
hts and a Yaesu 290R 2 mtr all mode txcvr. All of these work FB and
the price was right. I just thought that the fm module would be a
nice to have addition to complete the "allmode" aspect of the 551.
You never know what someone has and is willing to deal for until you
ask.
Thanks for the reply.

DW,
Thanks for the idea. I will look into the classic Icom group right
now.

Ya know, I bet the FM module is NOT that hard to build!! It operates
at the IF freqs of the radio; not 6mtr...and since most of the RF
stages are already present, its probably not too hard to make the
FM board from scratch...it used the MC3357 IF chip...common in most
radios today...(and if it didnt, that makes the job even EASIER! :)
I would be willing to bet that FMing the xmitter is pretty easy..
just run the mic into a preemph ckt then a audio clipper, RC filter
then into the VCO or some stage in the PLL and viola! FM!

It CANT be that tough to make IF you cannot find one..
Since its at IF freqs, breadboarding and deadbug construction
could be used..

2217. 100 watt SSB rig

Yahoo group: 6meter (2000 — 2003)
Date: 2003-01-10 20:14:37 UTC
From: j diefenbach
Topic: 2217 Message: 2217

Looking for a good, used SSB 6-meter (only) rig, 100 watts PEP output.

Any ideas?

jd

hey john
i think your out of luck the only 6 meter only rigs where back in the
70s and 80s and where 10 watts only except for the icom 551D but it was
only 80 watts out and the kenwood TS60 which i think was atound 80 watts
as well
you would be better off finding a used icom 706 or yaesu ft100 or any
other HF/6 meter rig if you want the 100 watts out
good luck

From: A10382
Topic: 2218 Message: 2219

There were, quite some time ago, dedicated 6M rigs.

Today, you'd be much better off looking for a multi-band (i.e.; HF + VHF + UHF) that included 6M. Older rigs might be a service and repair nightmare.

In addition, there are a very few multi-band HTs (that include 6M) that could be run through an amp -- problem is that the HTs w/6M do not typically have SSB or AM for 6M.

The RCI-5054DX and RCI-5054DX100 are both 6m ALL mode (including AM!). They are very nice radios. I had the RCI-5054DX (25 watt version) and it worked great. I got rid of it when I bought the FT-100D. The 25 watt version sells for around $300 new.

Here's one on Ebay:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1949680811&category=4674

Currently going for $275 and less than 2 hours left on
the auction.

The 25 watt version with 2 days left, $199:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=4674&item=1950034658

I looked that up on eham, and it says that it sells
for $1200!? Is that right? If someone wanted that rig,
they might was well get an HF+VHF/UHF rig for that
price.

I have seen them for under 500 on the used market. I agree a hf/6 meter rig would be much better. But if you want a six only the TS 60 is a good one..

From: Andy KC2SSB
Topic: 2218 Message: 2229

A brand new RCI-5054DX is only $300. If you bought one
used, it would probably be $250 or less... How much do
used 706's go for?

The TS60 was a price joke from Kenwood...they thought they could
capitalize on the TS50 popularity....they were wrong!! The TS60
was a flop saleswise.....not a bad rig but overpriced for what it
had to offer....
(BTW guys, PLEASE edit your replies...I cut out MORE in this reply
than what I have typed!!! Really!)

Michael Minor wrote:

Topic: 2232 Message: 2232

Should have the 6 meter station up and running this
Sunday. I too need the fm board for the 551D, maybe
someone will make up some and sell them to those of us
that need them.

My question is what are the most popular frequenies
for AM and SSB? Are there natioal call frequencies?
Thank in advance fot this information and hope to
catch you on the magic band. Scott

I certainly appreciate all the response. Is the RCI-5054DX100 a new radio? I am familiar w/the '5054 and its specs, but wasn't aware that Ranger had a 100 w version.

Incidentally, on another matter, Radio Shack is closing out a scanner antenna. The 20-044 ($39.99) is now selling for $4.97 and includes 50ft of RG-58.

The 100 watt version came out shortly after the 25
watt version. AES doesn't sell it, but HRO does. BTW -
HRO is selling the 25 watt version for $260, $10
cheaper than AES.

Date: 2003-01-11 22:28:42 UTC
From: cboone@earthlink.net
Topic: 2234 Message: 2236

Calling freqs on 6:
AM - 50.400
SSB DX - 50.110
SSB stateside - 50.125
SSB alt stateside (but rarely used) - 50.200
FM of course 52.525 is NSF (National Simplex Freq) and some use 50.300 on the West Coast (when 52.525 is not open but the lower end is!)

(Remember to NOT use 50.8 to 51.00 for ANY mode as RC modelers operate there....and RC planes travel at more than 60 mph...and can kill!)

I am attaching a nice chart I did in WORD (originally done for a 6mtr FM Rptr band plan that eventually grew into a total mode listing for 6!)...not sure if it will make it through. If it doesn't I can send it direct to whoever would like it and if there is any other mode that needs to be added, let me know.

From: j diefenbach
Topic: 2218 Message: 2240

Hello All,
I purchased the 5054DX100 from HRO, based on the positive comments from many of you.

FYI:
My 'ham shack' consists of:
Kenwood "Trio" TS-820D HF transceiver. Covers 160 thru 10 (no WARC).
A Heathkit SB-230 HF amp. to go w/the above.

A Heathkit "Seneca" 6 'n 2 Meter AM (only) transmitter; plate-modulated with the EICO 730 driver/modulator. I use this only on 6-meters. The receiver for this setup is an ICOM IC-75R....works great!!
A Heathkit "Shawnee" 8-watt 6-meter AM only.
A Heathkit "Pawnee" 8-watt 2-meter AM only

The IC-821 2-M / 432MHz SSB, FM transceiver.

Stacked 26-element 432s, Cushcraft 17-ele. Boomer for 2-M, Dir. Systems 5-ele. DX 6-M., Cush. A3S....all on a 100ft Rohn45 and all fed w/Heliax; w/1-5/8 feeding the 432s, 7/8" feeding the 2-M & 6-M antennas & 1/2" to the A3S.
I use an inverted "V" for 80/75.

In the mobile I have an FT-100 w/the ATAS antenna system.

Yahoo group: 6meter (2000 — 2003)
Date: 2003-01-12 18:46:51 UTC
From: Jamie R. Dean - W4JRD
Topic: 2242 Message: 2242

There is a file section for the people that signed up to the group via the
web site through Yahoo Groups. It is at
http://groups.yahoo.com/group/6meter/files/

Sorry but Yahoo will not give access to the e-mail only users of the list..

2244. question on kenwood TS700A

Yahoo group: 6meter (2000 — 2003)
Date: 2003-01-12 23:33:12 UTC
From: Dennis Kaylor
Topic: 2244 Message: 2244

hey guys
i recently acquired a kenwood TS700A
and it has a coaxial cable with a BNC connector on it coming out of the
back of the radio just to the left of the SO-239 conntector
this coaxial cable/BNC connector then connects to a BNC bulkhead
connector just below it
does anyone have any idea what this is for its not standard TS700A equipment
i was thinking it was added for a transverter or a preamp
any ideas
thanks

2245. Re: [6 Meter Sked] question on kenwood TS700A

Chris,
I made the file area where only I could add file to keep viruses out.You know someone would just love to give over 300 people a virus that could cause damage. If anyone has anything to upload to the file section please send it to me at jrd@... and I will virus check it and add it to the list. Please include in the email a description of what the file is and does.

2255. Six Meter Transverters

Yahoo group: 6meter (2000 — 2003)
Date: 2003-01-19 01:52:46 UTC
From: Mike Newell <mnewell1@austin.rr.com>
Topic: 2255 Message: 2255

I hope this isn't too far off topic. I used to operate six meter AM back in the 1970's, but haven't really been on the band very much since then.

I'm expecting a new Ten Tec Orion whenever they start shipping and I thought a good way to get back on the band would be to use a transverter with it. I've never used a transverter before.

Here's the question:

What do I get (performance wise) with a $395 transverter like the Down East Microwave 50-28 that I wouldn't get with something like the Ten Tec 1208 for $159? I know the 50-28 is 20 watts output and the 1208 is about 10 watts out, but there has to be more to it than that.

Thank you,

Mike Newell - WB4HUC
Austin, TX

Actually, that IS all there is to it. Lower output power (the tentec delivers 8 watts). Both allow you to work all the modes that the radio is capable of. The only difference is that the TenTec is much easier to interface. There's an antenna in and an antenna out jack on the back. An on/off switch is the only switch on it. True plug and play. Buy the TenTec. You won't be sorry. If you need more power, you can always add an amplifier...

Topic: 2257 Message: 2257

--- In AR902Mhz@yahoogroups.com, Gene Colson <genec@c...> wrote:
The Tk 6110 makes one of the best 6 meter radios. You must cut a
trace
disabling the Voltage tune line add a 100k resistor to that line from
a+.
Program it to all of the frequencies you want using 4x.x instead of
5x.x
mhz.like 42.525 instead of 52.525...Then using a Hex edit program,
change
the 4's to 5's. I think this is one of the best, with a great noise
blanker.
The TK981 and the TK481 programs some what the same. Edit the data
file.
Again, one of the better radios.

2265. stacking quads

Yahoo group: 6meter (2000 — 2003)
Date: 2003-01-30 03:59:14 UTC
From: Dennis Kaylor
Topic: 2265 Message: 2265

hey guys
has anyone ever done this?
i am considering stacking 2 4 ele quads for 6 meters just not sure how far apart to have them
i know the rule of thumb for yagis is roughly half the boom length but what is the rules on stacking quads anyone know
thanks

2266. Re: [6 Meter Sked] stacking quads

From: Lee
Topic: 2267 Message: 2267

Dennis,
I think that the spacing of yagis should be 1/2 wavelength and do not think it would be different for cubical quads. The following url is for a pretty good site on building quads. I hope it helps.
http://www.softcom.net/users/kd6dks/quad.html

Good Luck and happy building,
73 Lee KD7IBK

THANKS,KD5OLB

2280. 6M and Astronaut Hams

Yahoo group: 6meter (2000 — 2003)
Date: 2003-02-02 07:33:46 UTC
From: Mary-Frances Bartels
Topic: 2280 Message: 2280

Hello,
I'm fairly new to the group. I actively listened to 6M a few years ago, but lost interest when none of my homebrew antennas worked as well as I'd hoped (one I now use as a TV antenna - we don't watch much TV, so the less-than-perfect reception is fine with us). For Christmas I got a new Spi-Rho dipole antenna for 10, 15, 20, 40, and 80M. After installing it I found it loads well for 2, 6, 40, and 80M. When I saw that it loaded at 6M, I decided to resume monitoring.
Anyway, over the past several months I've taken an interest in the early space program, mostly the part I don't remember (Mercury). I recently saw the Liberty Bell 7 on display in Denver and met Scott Carpenter on his book tour.
Believe it or not, this week I was teaching my three boys (one has been a ham since he was 7 years old, KC0EVK, and is now 11.5 years old) about the Challenger disaster. We observed the anniversary by watching taped news coverage on the VCR.
Can anyone tell me if any of the Apollo 1 or Challenger astronauts were hams and what their callsigns were? I'm making a small tribute section for my www.keeplookingup.net web page to all three "events."
Thanks and I look forward to learning all I can from this group.
73, Mary-Frances

I was wondering if anyone noticed some unexpected short lived paths at the
time the shuttle exploaded. I suspect there would be a trail of ionized gas
as part of the decent.

Well ...Hmmm I got a doc from a guy here saying that was the call freq.
Well I will move down
there... 50.125 usb right ??

You just can't trust no one these days Jeez... :-)

why are you waiting on 50.200?
the call freq is 50.125 that would be the place to listen
and i wish you well the band has been dead down here in florida

well they have been trying for years to get the call freq to move up to
200 but no one is willing to use it dont know why or what differnce it
makes either way other than having to retune some of the longer boomed
yagis which usually have a tighter bandwidth
but anyways its 50.125 USB
hope the band opens for you and welcome to 6

Chris WB5ITT worte:
AM - 50.400
SSB DX - 50.110
SSB stateside - 50.125
SSB alt stateside (but rarely used) - 50.200
FM of course 52.525 is NSF (National Simplex Freq) and some use 50.300 on the West Coast (when 52.525 is not open but the lower end is!)

I'm listening on 50.125 but it's dead in EN21tb
KCØMFW

Wrong freq....50.125 is stateside...50.110 is DX calling freq.
50.2 has been proposed in the past by some but due to MUF not
getting to 50.2 often, it has NOT taken over as the stateside
calling freq...and likely never will.
Also be sure to surf the beacon band 50.05 to 50.08....that
can help tell you when the band IS open...and then go to 50.125 and call CQ ! :)

It was a move by some folks (not sure if it was SMIRK or CSVHF or whoever) to make the 6m calling freq be similar to the 2m call freq of 144.200.....but the MUF stops above 50.125 at times and doesnt open to 50.200 a lot of times...6 is MUCH different than 2...
(now you know the rest of the story)

hey ken
there is a program called CWget it uses your sound card to decode CW
works rather well
do a websearch for CWget you shouldnt have a problem finding it

Ken.. go get CWGET. You can pipe your audio from your rig to the sound card with a simple patch cord that has 1/8th inch jacks on it...If you have a full duplex sound card (most computers these days do) you will be able to hear and decode the CW on your computer.

I will admit my CW send is sloppy and I usually end up sending the figures of miss july when I meant to send a 599 report. And the decode is alittle rusty so I rely on my computer to catch most of it. I use a PK232 to do most of my work as it tends to work better in CW mode than my sound card and with alittle DSP (TS-2000 and a DSP-599zx) I can really pull out some CW at times.

Great way to check the beacons on 6 to see where the band stands... Being down in S.Texas I don't hear much like I should.. but then again.. If I would stop using my HF antenna and get a real 6 meter antenna that may help.

FM PSK???? Thats an oxymoron ;) ...PSK is a weak signal mode.....FM is NOT! Why run PSK on FM when it is designed to run at WEAK signal levels (even at the noise floor)?? Seems like a waste and who put it on 51.12 MHz?? Thats in conflict with several 6m FM bandplans....Either its a rptr input (CA 500kHz offset) or +/- 10 kHz off (WWARA 1.7MHz offset plan).....thats not a smart place to run a non voice mode....
FM voice only should be above 51.00 MHz....Narrow band modes like PSK work better below 50.8 (and of course, let us NOT forget...50.8-51.0 Mhz is reserved for RC models...do NOT xmit there unless you are controlling a RC model! Someone's safety is at risk there...)

Just a comment about using CW GET to copy your code. I use it all the time as I usually scan the ten meter beacons every day or so. I have one on 28.240, W1NRA. The programs works better than any other I've every tried. It will also work just using your mic near the radio speaker. One good thing is you can see the transmitted signal on the scope display so you can detect some xmitter problems there.

I use hamscope for PSK and RTTY but it is trash for copying CW. Just doesn't work. Squelch is just a thought there as it does really nothing to keep random caracters from printing in you receive window.

Try the CW GET and I'm sure you will enjoy it. It will copy ANY speed you want to receive.

Jerry / W1NRA/BCN 28.240

2300. more about CW GET

Topic: 2300 Message: 2300

Another comment about cw get. It will run in the background after you set the marker on the tone you want to copy. You can let it run for a while on maybe a beacon then open the buffer in notepad and save the message or print it if you like.

ALSO anyone using the MFJ 9406 transceiver? I have one I bought after a friend became an SK. He KR4M, Cliff, worked all states with it in less than a year several years ago. It has the CW board in it and he sent it back to MFJ to have it tuned up to max power.
I'm thinking about putting it on the air for a six meter beacon but need to figure out how to "lock it on freq" like maybe adding a crystal to the oscillator circuit to keep it on freq. Haven't looked at the circuit yet but sure it can be done.

I don't listen too much to six meters now but sometimes scan the beacons and hear a few but nobody on calling freq.

Maybe talk to some of you soon on six. Listen up for my beacon on ten meters also. 28.240

Just keep in mind that Stateside 6m beacons operating under automatic control are restricted by the FCC to the band 50.060-50.080 MHz per Part 97.203. (See http://www.fcc.gov/Bureaus/Engineering_Technology/Documents/cfr/1998/47cfr97.pdf)

73,
Abe N3BBF

<--- snip --->
I'm thinking about putting it on the air for a six meter beacon but need to figure out how to "lock it on freq" like maybe adding a crystal to the oscillator circuit to keep it on freq. Haven't looked at the circuit yet but sure it can be done.

I don't listen too much to six meters now but sometimes scan the beacons and hear a few but nobody on calling freq.

Maybe talk to some of you soon on six. Listen up for my beacon on ten meters also. 28.240

cul

Ken go to the ten meter beacon section, 28.150 to 28.300 .
You should hear quite a few there and get used to setting up the
CWGET program.

Don't know if you are using a tuner on your antenna or not. If you are, set it to BYPASS and you can still use it to listen to other bands.

We have a guy north and west of Atlanta, don't remember his call, he has stacked 5 el cushcraft 6 meter beams and runs about 800 watts. He can "open" the band when he wants to hi hi. Bet he "works" every tv and cordless phone and probably pa systems for several counties around. Haven't talked to anyone on 6 lately. May have to crank up one of these days and give a call or two.

I did work 6 for a while and here are a few I have qsl cards from:

CO2OJ, OSCAR MORALES, HAVANA CUBA
C6AFP, BAHAMAS
K4BAI, GA
KT4KP, GA
N2YQW, NY
KX1C, MASS
KC5ICS, OKLAHOMA
N2YDH, NY
WA4DYD, LILBURN GA
N4HSM, ATLANTA GA
N2MSS, NY
N2ODU, NY
N1OWA, MA
N4RFN, FLA
W4KA, FLA
WK3I, MD
W4CMA, GA
KF4DZV, GA
N1EFM, ME
N3VIS, MD
KD4K, GA
W4MYA, VA
KD1WO, MASS
K2UNK, NJ
W5FKN, TX
N2OBO, NJ
W3OOM, PA
K0TLM, MO

K0CXJ, MN

So what you're saying is... The guy up West of Atlanta qualifies for the W.A.N.T.S. award then? Hehehe

I think I know who you are talking about.. And ya.. Your correct.. He opens the band... I hear him all the time (when the band is open) down there...xchanged a few times also. But that was when I was in Dallas.. Now in S.texas I havn't heard a thing on 6.. But then again I don't have a 3 elem. Tribander for my 6 meter antenna anymore either.. Stuck with a verticle.. And probably havn't seen a band opening since I have been down here either nor heard of one.. Except 2M...Worked a few stations on 2m last week when the front came through...

Great! I will look forward to that! Hehehe...
My father lives in a restrictive selective enforcment community and we got the award when I was operating 40 and 80Meters and then the HOA got complaints so they decided to let us erect an antenna structure... Well the paperwork got lost after putting up a 35' tower with a tribander on top (great for 6 Meters!! Man was it good) and of course the new board members decided that this wasn't appropreiate and the restrictions were enforced... So we went back to operating with under the roof antennas and the complaints got involved again.. So, we now have the FCC inspections coming which we know the answer there... Neighbors are not happy cause now they have a $1000 investment in filters (minimum.. You know these days they have atleast 20 phones and 10 TVs throughout the house)... And we are with an antorney and Texas State Secretary because they are enforcing us and not the 3 Cband dishes and the 18" dishes and the TV antennas as these are a NO-NO also...

IF I see the award I'll display it proudly in the Shack for the inspections!

Nope not using a tuner. Just cut the antenna for the phone section of the band. However the match down in the CW part is not that bad. I do have a second part for the antenna cut for 40mtrs. Just so I listen.

Instead of a J pole, why not go for a simple 1/4wave OR a 5/8wave antenna...they can be easily built....true the J pole may have NO radials to contend with (which I have a problem with even on a 1/2 wave end fed antenna!)....but the 5/8wave has more gain at the horizon and (IMHO) is easy to match to 50ohms..

I would like to suggest to ALL amateur radio ops and anyone interested in HAM RADIO that, if you have a high speed internet connect or have a friend that can download something for you, to go to the ARRL site and DOWNLOAD THE HAM RADIO PROMO WITH WALTER CRONKITE, "AMATEUR RADIO TODAY". This is one of the better promos for ham radio that I've seen. It runs about 6 or 8 minutes and the file is about 70 meg so you will need a high speed connect to get the file. Then I suggest that you show it around to everyone that will give you a few minutes. Scouts, schools, ham clubs, church groups etc. It is very interesting and informative and isn't long enough to bore anyone. We need more good promotional videos like this to help us spread the word of "what amateur radio is all about". Show it to your local EMS, FIRE, POLICE, EMERGENCY MANAGEMENT and other city, county officials. As you can tell, I think this is a great way of getting the word out about what it is that we do for the community during normal times as well as during the more severe emergency conditions.

Topic: 2326 Message: 2328

Dennis The RigBlaster and MFJ and the other one name of which is lost to me now, are a little tricky to set up. But they will work hi hi.
Your problem is probably in the set up of your sound card settings. In the record section you may have mic selected and you need to change it to either AUX or LINE. Each card is a little different but try a few changes and I'm sure you'll get it working after a few attempts.
Sometimes the instructions have to be pretty general to cover all the options but you'll get it just may take a few cups of coffee hi hi.

Jerry / W1NRA

2 things for the group...

First, I am trying to get rid of an "old" 6 meter radio and power supply. Picture attached, virus free as I just virus scanned it. MFJ 6 meter with mike and Pyramid power supply 4 amp. Used 1 time, honestly. $200 for both combined + you pay shipping. Cashier's Check/Money Order or PayPal only. E-mail to below address if interested. First come, first served.

Second, does anybody use the Yaesu ATAS-100 antenna as a base antenna and if so, how well does it work and where is it mounted? I would also like some suggestions for attic mounts (small space, but I think I can get it up in there).

Thanks in advance.

I have had no problems with my IC706MKII-G and the Rigblaster interface. I use the RJ45 mic connector on the radio and follow the jumper connection instructions to the letter, including the direct shunt connections. If it is not working, be extremely careful, sending the wrong voltage to the wrong pin can damage the radio. Is it possibly a software issue? Do you have the software configured to use the proper serial port, typically it is COM PORT # 1? Is it configured to use RTS pins for the PTT keying? Some programs will use either or both RTS and DTR pins for keying the radio. I can send you a pinout diagram for the jumpers if you need. Good luck, I have made lots of packet, PSK31, and JT44 contacts using a IC706 on 6M and 2M, it should work great for you once you get the details worked out.

Just one othere comment on the Rigblaster. Be sure about the jumpers.
There are several wire jumpers in the kit but don't forget to install
the little black plastic jumpers that go across the pins after you
get the wire jumps in. They could be easily overlooked.
Just something else to check. The "Blaster" is probably ok, but like
somebody else said, check the software settings and the setup on your
sound card and you should find the problem.

good luck again hi hi

well thanks for the replies
i am having to send it back no matter what i try or do it wont key the radio so its either a faulty RigBlaster or an incompatability with the ComPort either way its going back so we will see if another one does the same thing

Topic: 2341 Message: 2341

I have an Icom IC-706MKIIG and the last microphone I would consider wiring up to it is a Tuner Plus 2 mic. The 706 does not need an amplified microphone. Matter of fact in some cases you have to turn the mic gain down to keep from over driving (Such as when using the radio on FM). I use the stock mic on mine for mobile/portable and I've always received excellent audio reports. I do use a Kenwood MC-85 for base operation, but the MC-85 is amplified so I have to reduce the mic gain on the radio down to 5 otherwise it will over drive.

Just my nickels worth.

Johnny

March 3, 2003

RELEASE: 03-14AR
NOTE TO EDITORS AND NEWS DIRECTORS: Members of the news media and public are invited to attend the fourth talk in this year's 2002-2003 Silicon Valley Astronomy Lecture Series, to be held on Wednesday, March 5, at 7 p.m. PST at Foothill College's Smithwick Theater, Los Altos Hills, Calif. More information is available by calling the series hotline at 650/949-7888.

SETI ASTRONOMER TO EXPLAIN HOW TO ANSWER A CALL FROM SPACE

"What Happens After Contact: Responding to a Message From Space" will be the topic of a free, non-technical talk at 7 p.m. PST on Wednesday, March 5, at Foothill College in Los Altos Hills, Calif. The public is invited.

Dr. Seth Shostak, senior astronomer at the SETI Institute in Mountain View, Calif., will discuss what plans scientists have if they detect a radio message from an alien civilization. He will examine how such messages will be verified to avoid hoaxes, how the news might be announced to the public and how humanity might reply.

"NASA Ames is pleased to co-sponsor the popular Silicon Valley Astronomy Lecture Series, which exemplifies excellence in science outreach," said NASA Ames Research Center Director G. Scott Hubbard.

Shostak is renowned for his ability to explain astronomical ideas and their implications for
society in everyday language and is the author of 'Sharing the Universe: Perspectives on Extra-
terrestrial Life.'

This is the fourth year of the Silicon Valley Astronomy Lecture Series, which is co-sponsored by NASA Ames, Foothill College's Division of Physical Science, Mathematics and Engineering, the Astronomical Society of the Pacific and the SETI Institute.

The lecture series is held at Foothill College's Smithwick Theater in Los Altos Hills. From Interstate 280, exit at El Monte Road and travel west to the campus. Visitors must purchase a one-day campus-parking permit for $2. Seating is on a first-come, first-served basis. Youths over the age of 13 are welcome. More information is available by calling the series hotline at

650/949-7888.

I don't have a schematic handy but if you're planning on having the beacon run unattended just keep in mind that, in the US, Part 97.203(d) restricts it to 50.060-50.080 MHz.

How much power and what kind of antenna do you have in mind? I hope we'll be able to hear it here on the east coast.

Thanks Abe,
I had the frequencies down somewhere, but that's furthest from my mind at this time. I'm planning on low power under 25 watts to a 4 element yagi at about 70 foot. Before you could hear it we would need some good double hop sporatic E propagation. I suspect that we will get that in June and I'd like to have it going before then. Let me know if you run across a good stable crystal controlled transmitter for 6 Meters.

73,
Geo W7LFD

Is anyone around Northern Ohio doing anything PSK related? I just got my IC-706 setup today to transmit PSK so I'd like to try it. I've been throwing out CQ's on 50.290 USB but nothing heard yet. I'll keep trying. I'm located just West of Cleveland, OH. As soon as I get my 5 WPM out of the way, I'll be good to play on HF.. but for now that IC-706 is staring at me teasing me to get it.

Hi Ryan,
What times have you been trying? I live NE of Youngstown and have done some PSK on 6m. Our club, the 070 Club is having a 6 m PSK contest in May or June.

Let me know when you're on 6, maybe we'll hook up.
73 for now,
Jay - AA8QQ

Well I'm in here on 6 with the local guys (So. NH & Eastern MA) on
50.4.....AM. We do this at 6AM every Sat/Sun.
The advantage? If others are listening & there is an opening they'll hear
you.
In additioning to monitoring 50.125 try 50.4 on occasion.

Are you sure the Squelch control is not partially on??? If you have/had been using the unit on VHF/UHF FM you may have forgotten to reduce the squelch setting to allow sound to pass all the time while operating SSB. I've had this happen on mine when bands were quiet or with weak signals.

Johnny

Welcome to the list! Hope you can get on 6M soon...sure alot of folks would like South Dakota grids. Haven't been to Watertown in 20 years...ended up driving there from Sioux Falls, then went over to Pierre.....LONG drive! Lots of time for mobile ops, to say the least.

Hopefully the band will start opening up soon. If you don't have a 6M SSB radio, there are several units to look for. On the cheap, the best radio for the $$ is the MFJ9406, which is a VERY simple radio....but only covers 50.000 to 50.300. As it is analog tuning, this may be a limitation for you....but I've seen them sell for under $100 used, so it is the cheapest 6M SSB/CW radio I've seen out there. Don't buy one new, it is overpriced.

The Ranger (of CB infamy) has a good multimode rig for around $200 used and $300 new. There is a 100W version for a bit more. Of course, the Alinco DX70TH is good and will give HF for when you pass your CW test, and the excellent Icom 706/MkII/MkIIg series. Yaesu has the FT100/100D and the FT817/897/857 radios. All these cost a bit more than the entry level rigs mentioned earlier. Look around, ask questions here on the list, lots of good info on antennas (get a small 3 ele beam if you can put up external antenni....an omni antenna {PAR or a halo} is good for general monitoring and listening for band openings), and general info for 6M.

Hope to hear you on!

Andrew
(eternally listening to static on 50.125)

Hi people, I just joined this list a couple of days ago. I am thinking about getting into 6 meters. I was wondering if anyone could give me some info? Just wondering if 25 watts and a wire dipole would work? I have heard and read when the band opens just about anything will work? If this setup would work, how often could I expect to get a opening? Is there just a few openings a year? I live in the upper pen of Michigan. On the north shore of Lake Michigan.

Thanks in advance for any info you can give.

25 watts and a wire dipole will work when the band is hopping. My suggestion is to cut the dipole for 50.150 mhz, this way you will be able to work a good portion of the SSB portion of the band without a tuner (50.125 is the calling freq, a dipole cut for 50.150 will allow you to work 50 - 50.300 with no problem). One more thing - you must be patient to work 6 meters. The band is only open when it feels like it. You might catch an opening a few days after you set up your antenna (like I did), or you might have to wait several weeks. But sooner or later you will catch activity.

Just to give you a rough idea of what 6 meters can do, I worked Argentina from Miami, FL with 100 watts and a copper pipe j-pole.

-- James KF4OUI

jeff
even though that set up will work when the band is wide open (which doesnt happen as often) it will be tough work to work the Eskip or aroura that can happen i would suggest if possible atleast a 3-5 ele yagi up about 30-50 foot you can find these antennas used so you dont have to spend a lot of money the differnce between a dipole and a yagi will be the differnce between you hearing them and not hearing them which sounds rather stupid until you hear a buddy 20 miles away working things you just cant hear cause all you have up is a dipole
you really need to invest the lions share of your radio budget on feedline and antenna
welcome to six meters it can be a great deal of fun and also be a great deal of frustration...grin
i am in central florida and missed chile yesterday

2387. Re: [6 Meter Sked] new here

Yahoo group: 6meter (2000 — 2003)
Date: 2003-03-23 16:45:02 UTC
From: cboone@earthlink.net
Topic: 2385 Message: 2387

Ahh the 64 dollar question on 6....when WILL IT OPEN??? :)
You can never tell for brief periods....but usually here in Texas
I find that when a cold front is in the panhandle or before, it acts
like a giant reflector in the sky and 6 usually opens up for a short
while...where to is another matter :)
Though thats not a true scientific way to judge 6, it works for me
in SE TX (Houston area)....

Yep, a dipole and 25watts will work when the band is open...heck I
once worked some folks on a 220Mhz !!! magmount and 10watts...
not the best antenna but it worked :)=

For best local results when the band is not open, try a PAR antenna
which is omni directional (also good when the band opens)....
and get it as HIGH as you can safely...OR if you prefer, get a yagi
or other beam antenna for 6....but you may miss some things if the
band is open in the other direction from what your antenna is pointed
to..Nice thing about 6..you can experiment and try new antennas, ideas
and STILL have fun....dont give up too quickly as the band wont be open
like 10 or 20! but when it does, its magic!!!!

Not sure if you know the freqs to listen to (since you said you are
new to the band)...here are the more popular ones:

50.045--50.08 Beacon territory.....(US auto bcn band starts at 50.06)
50.110 - DX calling freq
50.125 - North American calling freq
50.200 - proposed but hardly used NA calling freq (suggested to match
2mts 144.2 calling freq...but never took off!)
50.290 - PSK 31
50.400 - AM calling and working freq (has been for decades!)
50.8-51.0 - Model RC control freqs...STAY AWAY from these as xmitting
here could cause injury/death!
51-54 FM /Rptrs with 52.525 being National Simplex Freq...your offset
may vary on the rptrs channels as there is no real national
accepted bandplan (the old -1Mhz and newer -1.7 offset on
20kHz spaced ODD numbered channels is in the majority though)

Welcome to the Magic Band & see you on 6!

Chris
WB5ITT

2388. Activity on 6 meters

Yahoo group: 6meter (2000 — 2003)
Date: 2003-03-23 20:29:50 UTC
From: Dennis Kaylor
Topic: 2388 Message: 2388

hey everyone
its transEQ time the band is ope currently to south america
i have worked LW7 LU3 CE4 and heard several others
this started around 2:30pm EST from EL98 central florida
happy hunting

2389. Thanks

Yahoo group: 6meter (2000 — 2003)
Date: 2003-03-23 21:14:40 UTC
From: Jeff
Topic: 2389 Message: 2389

Thanks everyone for the information you gave me, one more question I have is. Are the openings more frequent on 6meters then they are on 2 meters?

Thanks again
Jeff
KC8UMB

2390. Re: [6 Meter Sked] new here

Yahoo group: 6meter (2000 — 2003)
Date: 2003-03-23 16:26:37 UTC
From: brian gunter
Topic: 2385 Message: 2390

hello i see you use a j-pole would you have the plans
for it around somewhere? i built one for 2 meter and
even with a 3ele and an 11 ele the j is still there
iwould love to build one for 6 (and it wil keep me
busy till i get a 6 meter radio) thanks brian kc0kfg

Just to give you a rough idea of what 6 meters can
do, I worked Argentina from Miami, FL with 100 watts
and a copper pipe j-pole.

hi i saw you used a j-pole did you make yours and if
you did would you share the plans? i built one for 2
meter and even thow ihave 3 ele and 11 ele i allways
fall back on the j-pole i would love to make one for 6
meter thanks brian kc0kfg

Just to give you a rough idea of what 6 meters can
do, I worked Argentina from Miami, FL with 100 watts
and a copper pipe j-pole.

2392. Re: [6 Meter Sked] Thanks

Yahoo group: 6meter (2000 — 2003)
Date: 2003-03-24 00:06:31 UTC
From: Dennis Kaylor
Topic: 2392 Message: 2392

hey jeff
i would say yes the are more often than on two meters guess that would
really depend on what you call a band opening on 2 meters
just to let you know i worked 3 stations in south america on 6 this
afternoon and got a 55 - 59 reports from them
six neters is a great band if you have lots of time to monitor like if
your retired or disabled or if you drive for a living where you could
have the radio on all the time
if all you get are a couple of hours a night you will be frustrated by 6
meters cause the band just doesnt open alot in the evenings
good luck

2406. Caling Cq

Yahoo group: 6meter (2000 — 2003)
Date: 2003-03-25 13:43:51 UTC
From: greggl.rm
Topic: 2406 Message: 2406

HI there, I have a dumb question to ask, but if I dont ask it I wont know so here it goes.
what is the proper way to call cq? Do you call it on the calling freq, or do you go just above or below it? I under stand you say cq 3 times followed by your call sign 3 times? Is this correct? Also how often do you do this, is there a time limit you wait before you call it again? And how long Do you keep calling it for? I feel stupid for even asking this question, but would feel even worse if I were calling it wrong on the air?
Once a contact is made then you pick a freq and move to it right?

Thank you for your time
Gregg

I call CQ on the calling freq. # times is just fine. How ofter well thats a hard one. If no one answers then wait a few and try again. If the band opens up and someome does answer then move them off the calling freq. Nothing wrong wit giving your call on the calling freg and at the same time anounce that you are going to QSY up the band. Good luck and I am sure that you will get many different answers. Pick the one that works for you Mike NH6CJ/5 EM 04 Oklahoma

Space Weather News for March 25, 2003
http://www.spaceweather.com

Earth is heading for a solar wind stream flowing from a coronal hole on the Sun. Geomagnetic activity is possible on March 25th or 26th--especially during the hours when our planet first encounters the stream. Sky watchers should be alert for auroras after local nightfall on both dates. The best viewing sites will be at high-latitudes: e.g., New Zealand, southern Australia, Canada, northern Europe, Alaska and northern continental US states like Michigan and Wisconsin. Stay tuned to spaceweather.com for updates and images.

Heh...probably the toughest thing to do is actually key the mike and start speaking! To start off....listen on the freq. you've chosen for several minutes. Sometimes a station which you can't hear is on the air with a closer station....listening will ensure that you don't inadvertently double with the other station. It is polite to ask if the freq. is in use, just in case ("freq in use?" and callsign). I've heard (and do so myself on occasion) many call "CQ Six Meters"... a tad redundant, to be honest. Guess that's just in case we pick up the wrong mike, eh? Call CQ a few times, end with your callsign and gridsquare (if you're in a rare gridsquare, you should get LOTS of replies!!), then listen for a minute or two. No answer? Try again.

To get your feet wet, see if there is a local net within reach of your station. Check in a few times, get on the air, listen to others. If you make a mistake, just apologise. I've only had one KC Cop squawk at me....I was calling CQ on the international calling freq. (50.110) in spanish. He admonished me for doing so (I did ID in english) until an Argentine station came on the air. As he spoke only spanish, we had a nice chat. Didn't hear from the KC Cop again!! Most folks are quite nice on 6M....guess it is because we have to be patient for openings.

Cheers!
Andrew

Woops, should be ¿que puede cantar en español? Heck, I can't even sing in ENGLISH!

BTW, heard several W9's this AM....but lots of QSB. Maybe the coronal ejection event will cause some neat propagation!

CW beacons. Listen when prop. is good and you'll hear a bunch. There's one (50.057 or so) over the hill from me in Tenn. which I can hear whenever prop. opens up to the W...think it is near TenTec.

How well do Jpole's work in 6m, 2m or whatever... I just built a 2m one, and am waiting for a day off to build it, but just wanted to confirm from everyone who i guarantee has to be more experienced in this area than I, how really good they perform and hear and all that. All I do hear is they are better than whips, and better than groundplanes, in performance wise. What minimum height do you guys recommend I install one at, depending on frequency I know, to effectively have good range.

They work good, for something that you can build in an afternoon for less than $20. They are (I think) 3/4 wave in height, so they outperform the standard 1/4 wave groundplane antenna.

Anyway, you want to install the antenna as high as possible. A minimum height figure to go by is 1/2 wavelength. Remember that 6 meters is still a VHF band, so when the band is not open height is everything. When it is open height is less important, but for the most part higher is still better.

-- James KF4OUI

FYI, in 1991 the ARRL adopted the SCRBBA 6 meter bandplan as the national standard. FM repeaters are - 500kHz offset, 20 kHz channel spacing on EVEN frequencies. That being said, there are numerous areas that don't comply with the standard.

From: Christopher Boone
Topic: 2385 Message: 2435

FYI, the ARRL IMPROPERLY adopted the SCRBBA bandplan. I have seen the paperwork from the ARRL when a survey was taken..the SCRBBA plan was soundly rejected nationwide but yet the VRAC adopted it..mainly because its chairman was a S CA person and NOONE else gave a damn at the time...I know, I checked with several VRAC members about this...and you can read all about it in a QST article that described the debacle some years ago...where Clay, K7CR and the WWARA voiced their strong opposition to the way it was handled.....what a joke.

Yet it is REJECTED by over 95% of the US....check the facts...the 500kHz plan is a step BACKWARDS in technology...and promotes OLD tube type radios....the 1Mhz and 1.7Mhz plans are still in the majority...and will remain so since the ARRL plan is NOT the national bandplan..it is merely suggested...and as such it has been rejected! The 1.7MHz plan is in use in more states (especially MACC areas) than the 500 kHz plan.

The ARRL VRAC does NOT make NATIONAL bandplans nor do they make policy...they only make RECOMMENDATIONS....thank goodness...

2436. jpole gain

Yahoo group: 6meter (2000 — 2003)
Date: 2003-04-02 21:50:05 UTC
From: Jon Cope
Topic: 2436 Message: 2436

how much gain does a jpole generally have? I've got mine built, and installed, with about a 1.1:1 SWR reading, which is good enough for me. Since I'm using a radio on VHF that is over 50 watts, I had to do my RF safety calculations, to make sure I was in the limits. With the 2.2 a dipole generally has, and with all the other factors and #'s involved, I came out passing in controlled and uncontrolled tests and such. I just wasn't sure about gain though....

i think a J pole has a gain of about 3db
unless you need vertical polarization you would be better servered with
a 4-5 ele yagi much more gain
but if your just working 6 FM then a Jpole is okay

sirs, and ma'ams,

has anyone ever used a "Wilson 1000" cb antenna on 6 meters? i know that some cutting of the whip would have to take place. but i think that would be a pretty nice antenna for 6 meters. anyone with ideas, please email me!!

thanks and

(Not sure if this is a dupe...Netscape crashed on me and I wasnt sure
if this reply went out....)

Save the Wilson for 10mtrs....cutting it for 6 will shorten the
antenna too much (!) and it will not be efficient on 6....best is to
make a simple 1/4wave g/p antenna (54inches or so) OR use a 5/8wave
2mtr antenna on 6...(I prefer the Larsen NMO-150s myself...works great
over the entire band if you dont cut them...and they still work
great on 2mtrs as well!)

2445. Re: [6 Meter Sked] antenna

Yahoo group: 6meter (2000 — 2003)
Date: 2003-04-05 19:54:38 UTC
From: cboone@earthlink.net
Topic: 2440 Message: 2445

Cutting the whip down will result in POOR efficiency at 6mtrs... a simple 1/4wave vertical is only 54 inches on 6...WHY cut down an antenna that is 49-62" on CB (where 108" is 1/4wave) down to much less on six where a SIMPLE vertical of the same height without a coil will work on 6 as is? DONT use a CB antenna on 6....it's not worth the trouble...use it on 10! and use a simple but more efficient antenna on 6! Remember to get BEST local coverage on 6 SSB, you NEED to be HORIZ NOT vertical...running cross polarization locally can hurt you up to 20 DB...thats a 100x power difference! Chris WB5ITT JOE T wrote: > > if you look on the wilson website they have a formula for cutting > the whip to other freq's > i have not tried it on six but i am planning to because i happen to > have a 1000 sitting here not being used > > http://www.wilsonantenna.com/cutting.htm > is the link to wilson > > joe tedesco > kc2dkp > > --- In 6meter@yahoogroups.com, vhfradiobuff@a... wrote: > > In a message dated 4/5/2003 11:35:20 AM Eastern Standard Time, > > kd4nfs@y... writes: > > > > > has anyone ever used a "Wilson 1000" cb antenna on 6 meters? i > know > > > that some cutting of the whip would have to take place. but i > think > > > that would be a pretty nice antenna for 6 meters. anyone with > ideas, > > > please email me!! > > > > You'd be better off just buying a 2 meter 5/8 wave antenna. Topic: 2440 Message: 2446

Acutally it would be better if the coil was REMOVED and the whip
cut for 54 inches alone! :) The coil isnt needed on 6 and only leads
to radiation loss due to the MUCH shorter element length.

using a 2mtr 5/8wave antenna (47-49in whip) would be better...the
coil tends to cancel reactance on the whip on 6 and gives you a broad
SWR range (like 50-54 MHz!)

as cheap as a 6 meter 1/4 wave is to make why would you want to ruin a perfectly good 10 meter antenna even if you didnt use it for 10 you could sell it at a hamfest for more than what you can buy a 102in whip and cut it down or just get a 55in piece of 3/8th 24 thread threaded rod and use it no need it wasting a good antenna brian gunter wrote: >but it looks like if you do the math (and i could be >wrong) it looks like the mast would be about 3 inches >in lengh not much there to work with. brian kc0kfg >= = = Original message = = = > >if you look on the wilson website they have a formula >for cutting >the whip to other freq's >i have not tried it on six but i am planning to >because i happen to >have a 1000 sitting here not being used > >http://www.wilsonantenna.com/cutting.htm >is the link to wilson > > > >joe tedesco >kc2dkp > > >--- In 6meter@yahoogroups.com, vhfradiobuff@a... >wrote: > > >>In a message dated 4/5/2003 11:35:20 AM Eastern >> >> >Standard Time, > > >>kd4nfs@y... writes: >> >> >> >>>has anyone ever used a "Wilson 1000" cb antenna on >>> >>> >6 meters? i >know > > >>>that some cutting of the whip would have to take >>> >>> >place. but i >think > > >>>that would be a pretty nice antenna for 6 meters. >>> >>> >anyone with >ideas, > > >>>please email me!! >>> >>> >>You'd be better off just buying a 2 meter 5/8 wave >> >> >antenna. I agree that it would be a waste of a good antenna on 6M. I've used the Wilson with great success on 10M. Tunes up really well - it's very broad (low-Q) in my experience but does allow one to get out. kevin kc6pob --- Dennis Kaylor wrote: > as cheap as a 6 meter 1/4 wave is to make why would > you want to ruin a > perfectly good 10 meter antenna even if you didnt > use it for 10 you > could sell it at a hamfest for more than what you > can buy a 102in whip > and cut it down or just get a 55in piece of 3/8th 24 > thread threaded rod > and use it > no need it wasting a good antenna > > brian gunter wrote: > > >but it looks like if you do the math (and i could > be > >wrong) it looks like the mast would be about 3 > inches > >in lengh not much there to work with. brian kc0kfg > >= = = Original message = = = > > > >if you look on the wilson website they have a > formula > >for cutting > >the whip to other freq's > >i have not tried it on six but i am planning to > >because i happen to > >have a 1000 sitting here not being used > > > >http://www.wilsonantenna.com/cutting.htm > >is the link to wilson > > > > > > > >joe tedesco > >kc2dkp > > > > > >--- In 6meter@yahoogroups.com, vhfradiobuff@a... > >wrote: > > > > > >>In a message dated 4/5/2003 11:35:20 AM Eastern > >> > >> > >> >Standard Time, > > > > > >>kd4nfs@y... writes: > >> > >> > >> > >>>has anyone ever used a "Wilson 1000" cb antenna > on > >>> > >>> > >> >6 meters? i > >know > > > > > >>>that some cutting of the whip would have to take > >>> > >>> > >> >place. but i > >think > > > > > >>>that would be a pretty nice antenna for 6 meters. > >>> > >>> > >> >anyone with > >ideas, > > > > > >>>please email me!! > >>> > >>> > >> >>You'd be better off just buying a 2 meter 5/8 wave > >> > >> > >> >antenna. An antenna that is as short as the Wilson (percentage wise) on the design freq cannot be low Q without having problems..what is your basis for such a statement that it IS a low Q antenna anyway?..

the actual radiating section is less than 1/4wave long...this makes the efficiency less than optimum....The SWR may be broad to cover the CB band (which is not as wide as 10 or 6mtr)...but so what? SWR is not an indication of radiation efficiency....
(A dummy load is 1:1 but that doesnt make it an antenna :)

A low Q only means wider bandwidth...it does not mean the antenna will radiate at all! Even on 10mtr and CB, a simple 1/4wave whip with a proper groundplane would radiate better than the Wilson...

If looking for a good mobile vert. antenna on 6, a Larsen NMO-150 with its 49in whip (optional) is the best antenna I have found..it is better than a NMO-47 (this mentioned by Larsen in their older catalogs) and can work BOTH 6 and 2mtrs (something the NMO-47 and the Wilson cannot :)

Watch DX logger pages on the web. The annual spring Es season is coming up soon and will peak near the solstice. Openings will be likely be frequent, but unpredictable. Es openings can happen anytime of day, but will have daily peaks near mid-morning and late afternoon local time. Listen for the CW beacons between 50.000 and 50.080, they are very effective indicators of openings. These are links to the the loggers I most frequently use:

http://dxworld.com/50prop.html

http://oh2aq.kolumbus.com/dxs/50.html?

Meteor scatter and tropo scatter works well nearly anytime on 6 meters, if you have enough power behind that 3 element. Up to 1200 miles on MS is easy with the digital mode FSK441 by Joe Taylor, K1JT. 100 watts would likely be the minimum out for useful MS contacts with a 3 ele. Watch these pages for easy schedules:

http://www.pingjockey.net/cgi-bin/pingtalk

http://www.chris.org/cgi-bin/jt44talk

If you are far enough north, aurora propagation is common for 6 meters. SSB is difficult, but CW works well. Watch the DX loggers, and watch the solar observatory web sites for increased geomagnetic activity. Watch for the Solar Flux Index to get above 200 (not until about 8 years from now), the planetary Kp to get above 4-5, and the Field Bz to be pointing south. Here's two pages for solar data:

http://www.sel.noaa.gov/today.html

gopher://solar.sec.noaa.gov/00/latest/wwv

Most of all, you have to make some noise yourself on 6 meters. If everybody is listening and nobody is TX'ing, how will you ever know if the band is open or not. Call CQ or just give your callsign and grid square once in a while. Don't get discouraged if you don't hear anything on 6 meters but white noise and birdies for months at a time. When 6 is open, you can work thousands of miles with a 5 watts and a 3 element beam.

Good luck! 73

Brian, KC7OTV CN84 Oregon

From: ve6rdc
Topic: 2463 Message: 2463

Hello again,

I appreciate the advice from folks on the list that suggested I go for a multiband mobile instead of the Ranger unit. I was a little surprised about the negativity regarding the Ranger radio given the positive reviews I have read on the net and elsewhere. Is the Ranger really that bad? People love the little MFJ radio, and as far as I can tell, the receiver specs are about the same between the MFJ radio and the Ranger. Plus, the Ranger has a lot more feature wise. I already have a dedicated HF rig, and was looking for a separate radio for 6M, so that I can play HF, and monitor for openings. My budget is pretty limited, probably no more than $300USD. I have owned the 706 in the past, and agree that it's a fine little radio. My last 6M rig was the 551D - also nice. Would I be that bummed out with the Ranger?

Thanks again,

Chris VE6RDC

I owned the Ranger for a while and LOVED it. The replies you are getting are from people that have the money to spend. If you are limited to $300, the Ranger is the way to go. I was very happy with it. As a matter of fact, with that 25 watts, I worked several European stations during the end of 2001 and beginning of 2002. A nice feature is the ability to use a real microphone, like the Astatic D-104 without any special hookups, as is the case with a lot of those HF+ rigs. I used a Silver Eagle with it and the look of the microphone along with the audio comments were great. If you are looking to work 6m repeaters, you might be a little disappointed if your local repeaters are using PL tones, but most 6m fans don't too much on FM and if they do, it's simplex. Hope that helps! =-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=- 73! de Andy KC2SSB (ex: KF4KHC/HL9HCT) Beachwood, NJ USA! There is nothing "wrong" with the Ranger. It works just fine. What people are saying is that it is limited to only 6 meters, which is fine if that is all you want. But on the used market, for the same price or slightly more than a new Ranger, you can pick up something else that will do all the Ranger does plus more.

Ultimately, you have to go with what your budget allows. No matter what you get, I hope you enjoy 6 meters! May the band never close for you :)

-- James KF4OUI

I appreciate the advice from folks on the list that suggested I go
for a multiband mobile instead of the Ranger unit. I was a little
surprised about the negativity regarding the Ranger radio given the
positive reviews I have read on the net and elsewhere. Is the Ranger
really that bad? People love the little MFJ radio, and as far as I
can tell, the receiver specs are about the same between the MFJ radio
and the Ranger. Plus, the Ranger has a lot more feature wise. I
already have a dedicated HF rig, and was looking for a separate radio
for 6M, so that I can play HF, and monitor for openings. My budget is
pretty limited, probably no more than $300USD. I have owned the 706
in the past, and agree that it's a fine little radio. My last 6M rig
was the 551D - also nice. Would I be that bummed out with the Ranger?

I own a Ranger....the 100 watt version & am rather impressed with it.
I also own the FT-100 for the mobile but am NOT impressed w/the AM-side of that rig (for 6-M AM).
I have the usual complement of HF stuff and 2-M & 440 equipment.

The Ranger works well and has rec'd good reports from all over the area in all modes (exc. FM....I do not do much FM).

If you're just looking for a 6-M rig the Ranger is excellent. But if you're looking to expand your freq. capabilities I'd recommend something else.

Andy,
you obviously have not been on 6 long...

6FM rptrs are around in a lot of places...and more active than
the SSB portion a lot of the times....a good number of 6m rptrs are
carrier....not all but a lot....I work 6FM rptrs all the time when
the band is open....

Please dont make such incorrect remarks about 6mtrs.....the band is
there for all...not just a few....and there is plenty of action
for everyone...dont belittle one mode for another.

If you have only $300 for the budget, the Ranger would be a good choice...also any used all mode radio like the YAESU FT-680 or the ICOM IC 551 (with the FM board) or the IC560 mobile...or even the Kenwood TS6xx series with 6 in them (600,660,670, even the 680 which has HF in it..some you can find on the used market fairly low)
I PERSONALLY would skip the MFJ....for the money you can find something with more modes/features, etc...(like the Ranger)

Pick the radio that fits your budget....I would HIGHLY suggest an all mode, 10+ watts out (more if possible) preferably with allmode squelch (allows you to monitor SSB freqs for HOURS) but of course you can add that using aftermarket boards for about $100 or so...

I've been working 6 meters for a few years. The repeaters in this area all use PL tones, which is something lacking in the 5054. I've monitored the frequencies for 6m repeaters in my area and heard very sporatic activity at best. Because of the coverage of 2m repeaters around here, there is little activity on repeaters on other bands, thus on FM, your best bet is simplex around here. As a matter of fact, activity on 6m FM in my area was so rare, I switched the antenna I was using on 6m FM over to 2m FM (it's actually a dualband double zep antenna, so it can be used on either) and now I only have a 3 ele yagi for 6m SSB. Don't assume that since you have a lot of open, non-PL repeaters on 6m in your area that all areas are the same. Besides, the real die-hard 6m ops don't ever turn that mode switch over to FM. Unfortunatly I don't have as much time to work 6m as I'd like. =-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=- 73! de Andy KC2SSB (ex: KF4KHC/HL9HCT) Beachwood, NJ USA! Hi all.

The six meter band is really inpredictible, indeed the band can be dead many days and many months, but i think this is why it is so interesting band.

We can work on sporadic E, F2, aurora, backscatter , transequatorial propagation and other propagation kind. The 6 meter operator should try to listen more often the beacon frequency under 50.100 mhz and sometime you will copy some signal even if you think the band is dead. Often the band is open but nobody try to send CQ on the air !

I have two rig for 6 meter operation, the Ranger 5054DX is my first transceiver and work very fine for the price. During fall 2001 i made many many QSO with European stations during the F2 propagation with 25 watts and a 3 elementsYagi homebrew.
My second rig is the Yaesu FT-817, even with only 5 watts i can take contact with California and also with a station from Washington at more than 1400 km via sporadic E and the antenna was the rubberduck !

This is my website on my beacons on 6 and 10 meter with information about propagation.
www.qsl.net/va2mgl

Best 73 and good Dx on six.

Marc VA2MGL

How anybody would consider a D-104 as a real microphone is beyond me. Crystal, Ceramic mikes were fine in the 60's and 70's, but there are far better microphones produced today for less than the Astatic's pricing.

Around $30 at the Hamfest...bypass the amplifier...crisp, clear
communications audio (on the rigs I've tried!)

just kills me these people who "try" for broadcast quality on SSB i could see it on AM but not on SSB what a waste of money i listen to these guys on 17 and 20 who spend hundreds of dollars on mics and EQs and pennies on antennas just for "boardcast quality"

I agree....I work with professional broadcast equipment all day long
(being a broadcast engineer for 27+ years on/off doesnt hurt! :)
The RE20 mics and the mic processsors used (Symetrix 528E, etc) are
GREAT for BC use...(up to 10 or 15 kHz)...but when the audio
bandpass is less than 300-3000 (more like 2600 top end), its a waste
of money!! A GOOD mic MEANT for COMM use will work just fine...and
any good compressor will work on SSB....as long as you dont splatter :)

Hey, Dennis, thanks for the positive helpful for information,, NOT!
I was excited about an opening and didn't have a grid handy.
Just because I don't collect QSL cards and gridsquares doesn't mean I am not interested in working DX, especially on the magic band.
I also check the messages from work and can run out to the truck to make a contact....
A simple Country/State/City would be most helpful,,,,, exactly how every one else in the world describes a location!
.....Keith WE6R Monterey CA USA CM96
p.s. With the hundreds of links on your webpage, how come no gridmap links???

well keith
this is not the first time you have been unwilling to learn the grid map
which you will need to learn cause thats how 6 meters is done
most times when we work a contact on 6 it is so brief that all we get is
a call sign a grid square and a report
it is not our responibilty to inform you of the city/state/country of
each and every contact we make
all you have to do is print out a map and familize yourself with the lay
out then you will know what part of the country is being worked if its E
or F its east coast if its C and D its west coast its not rocket science
we usually dont get the time to ragchew on 6 so we dont learn all their
details till we get around to sending out a card to them
and thats the way 6 and 2 meter SSB is and its how the rest of the
bands should be its a lot easier to look on a grid map to find a
location than it is to try and understand broken english on what his
city and country are
good luck

My comment was about the suggestion that a D-104 is a real
microphone. It's being discontinued for a _REAL_ reason.

Icom makes a very nice grid map in PDF format. Check out their homepage or do a search on Yahoo for Icom Grid Map. You'll find it. I have it printed out and in a sheet protector for the US. I also have an ARRL gide to grid squares to track the rest of the world. I believe there's a link to some grid maps on my page. =-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=- 73! de Andy KC2SSB (ex: KF4KHC/HL9HCT) Beachwood, NJ USA! It's got a classic look and with the D-104, you didn't have to talk a few inches away like you do with mic's for these new rigs. With the D-104, I got tons of unsolicted comments on my good audio with the 5054. I have a Heil HM-5 and it gets good audio reports, but I had to buy a small boom so that I could keep it a few inches away from me. =-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=- 73! de Andy KC2SSB (ex: KF4KHC/HL9HCT) Beachwood, NJ USA! The ARRL makes a grid square map for the U.S. that once you work a grid you can highlight the grid with a highlighter. I picked up one of these at a local hamfest for $2.00 73, Jamie R. From: Keith
Topic: 703 Message: 2489

Dennis, how about you list your openings how you like, if you can't type a couple of more characters, fine.
But when I simply ask someone ELSE a question, if you don't have an answer, keep quiet.
Your way is not the ONLY way!

If folks would list the grid square AND location, it gives everyone more information.
Many a time I have had a great conversation with someone when I gave my grid as CM96, Monterey CA and THEN they mentioned they used to live here etc.... It's a HOBBY, and it is fun to actually talk to folks! I am not getting paid for the number of contacts.

I have a 6 meter repeater and we actually TALK TO EACH OTHER on it, amazing! 51.76 out, 51.26 in PL 114.8 enc/dec.

Thus, the grid square exchange becomes important because it's quick and easily understood, much like the reason for the phonetic alphabet. It's the standard used by anyone that does any amount of SSB work on the VHF frequencies. Some operators may not be familiar with the location of all 50 states (I'll admit that I'm one of them), but if you tell me you're in CM97, I know to point the antenna west and make adjustments as I listen. Also, as it's already been stated, the grid system would be fantastic for use on HF, as I certianly don't know where every country in the world is at or what callsigns go in what regions, but if a DX station somewhere in the world were calling and saying they're in KJ15, I could look at my handy dandy grid map of the world and see that KJ is in the center of the African continent. Then I'd be able to determine which way to point a beam. Knowing the grids has nothing to do with winning awards. It's the staple of effective VHF SSB work and should be integrated into HF as well. =-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=- 73! de Andy KC2SSB (ex: KF4KHC/HL9HCT) Beachwood, NJ USA! I am going to France soon and wish top operate on Six. I will be staying in Northern Brittany near Callac. Can anyone give me details as to the bandplan in France (or indeed that area of France). I am told I can use only 5 watts in that area.

I will be operating under the CEPT agreement rules.

Thanks for your help.

Ivan (G7WLL).

Ciao, Stephano. Welcome to the world of 6 Meters! As you are considered rare DX in the US, try 50.110 (international DX calling freq.) SSB USB. 50.125 is quite active in the US when the band is open. Don't know about others, but 50.111 to 50.118 is covered up with the LO's of TV receivers in my area (HUGE birdies!!). FM is good via repeater. Only some simplex here stateside in my area (EM96) on 52.525 mhz.

If you can, try looking at the 6M DX cluster reports at

http://www.dxworld.com/50prop.html

which should give you an indication when the band opens. Hope to work you on 6M!

Cheers;
Andrew
KG4GSC
(PS. I work with several Italian companies in Brescia, Bologna & Firenze. If I ever get to visit, I'll have to bring a rig with me!)

Hi Andrew,
I'm waiting to get my new rig IC-706MKIIG to work 6 meters.
As soon as possible I will try 50.110 for DX calling.

Hope to contact you

Hi
Wonder if anyone has a circuit for constructing an ATU for 6m and/or
2m? Prefer if it was small so it could be used mobile.

Many thanks

Alan

The 1976 ARRL Handbook has a construction article for 6 and 2 metre ATU'S.
I can scan the article and email it to you if you want it.

-------- Original Message --------
Subject: [IcomRadio] FOR SALE: Icom IC-275A and IC-575H
Date: Sat, 19 Apr 2003 15:49:53 -0400
From: caitlynmaire@...
Reply-To: IcomRadio@yahoogroups.com
To: icomradio@yahoogroups.com, icomclassic@yahoogroups.com

Hi, everyone,

I have two great Icom VHF rigs for sale:

Icom IC-275A 2m all mode xcvr, 25W version with built in power supply. Extremely nice cosmetic condition with only minor scratches and working perfectly. With HM-14 touch tone mic, AC power cord, original manual, box, and packing. $350 shipped in the USA.

Icom IC-575H 6/10m all mode xcvr, 100W version. The FL-101 250Hz CW filter and FL-102 AM filters (about $180 worth new) are both installed. The radio is in nice shape, with only minor dings and scratches, but the right hand side of the backlight is out. The display is still clear and readable. It's just a light bulb, but you have to pretty much disassemble a whole lot of the rig to change it and I haven't found the time yet. With original HM-12 mic., DC power cord, original manual, box, and packing. Original purchase date was 1993, so this is a late production radio. $550 shipped in the USA.

I will ship to Canada, but expect to add about $15. Prices are 100% firm. Payment by money order (postal money order very strongly preferred) only. I was going to put these on eBay, but I've been chastised for not giving the enthusiasts on the reflector first go when I change rigs. OK, y'all have the first chance :) Feel free to look at my eBay feedback though, under ID mizuho-thp-ncg

73,
Caity

TVI filters for the transmitter For Sale:

Drake TV-1000-LP
Low pass filter for the transmitter
This is the filter that may also be used on the low
end of six meters, as well as HF. It is good for 1000 W
below 30 MHz, and about 200 W up to 52 MHz. $ 30

Bud LF-601 "Variable Low Pass filter"
This filter is a bit over a foot long, and about 3 inches square
with an SO-239 connector on each end. In addition, it has 5
variable capacitors on the top of it, that can tuned for maximum
TVI improvement. Although a bit harder to adjust, it should
give better TVI reduction. $ 30

B & W TVI filter, model 415
I have not been able to find specs on this model, but it says
right on it that it is for 52 ohm systems. It looks like it will
easily handle 1500 Watts. SO-239 connector on each end.
Good shape. $ 30

TVI filter, made by Communications Power, Inc in the USA.
This appears to be a bandpass filter for use on 10 (or 11)
meters, and is rated at 600 watts. It has provisions for tuning
the input and output for maximum TVI reduction. SO-239
connector on each end. $ 30

Prices do not include shipping from Florida.

Thanks.

2513. Nice opening and antennas

Yahoo group: 6meter (2000 — 2003)
Date: 2003-04-22 12:34:25 UTC
From: MadDrewski@aol.com
Topic: 2513 Message: 2513

Sitting around last night (10pm EDT) working on a portable dipole, I turned on the MFJ travelradio to check SWR on my "creation," and heard several stations from KS/NE (EN10) booming in! Worked several stations, all using the MFJ (8-10W out) and a portable dipole which I whipped (pun intended) up for an upcoming trip. Had great sig reports....even impressed the guy running 200W into a 5 ele beam in KS!

The dipole consists of a chunk of Nyloc (or use PVC tubing...just as easy) which holds two Radio Shack 72" whips horizontally. Took me around 20 minutes to build the thing, and the cost was $11. I use 15' of RG58/U, with a couple of turns looped just before the antenna feedpoint to decouple the feed line. Drill thru the PVC or Nyloc, stick the antennas thru it and connect the coax with either clip leads or nut/screw. I used the Nyloc (solid nylon) because I had it and I was going to use a tripod for support. Total packed weight with tripod is 5 lbs, package length is around 15" long. I have a piece of string attached to the tripod locking bolt to give me the correct 54" length on the whips without having to carry a tape measure. Gain is better than the halo, but not nearly as good as the HexBeam I whipped up last month. Now, if I can just figure a way around the CC&R's in the neighborhood.....!

Offering for sale an 8877 6 meter (only) amplifier. The amplifier is
housed in
an Ameritron "AL" series amplifier enclosure. All of the Ameritron metering
features etc. remain intact and read all of the functions they did in the HF
setting. The amplifier has a variable tuned input circuit so that the full
power of the exciter will make output power at any drive potential! 100
watts
drive makes 2300 watts output and only takes about 60 watts for the
legal limit
mark. So there is plenty of headroom. Highest power 6 meter amplifier
I have
ever witnessed. Superb construction and all circuits tuned to perfection.
Amplifier has BRAND NEW EIMAC 8877 tube! $2000.00...prefer local
transaction
in tristate area or east coast, but may consider shipping. Please e-mail if
interested. Thank You 73 Louie W1QJ

Greetings-

I'm just getting back into radio again, and I was wondering (as a no-code tech of 10 years now!) if the 6m bands would be a good place to restart. I'd really like to DX.

I don't have any radios yet, and I live in an apartment, so I don't have much real estate (I do have a deck on the top floor, with a good sky view).

A couple questions:

1) Is most DX 6m activity done with FM, AM or SSB?

2) Are there any propagation charts posted on the web? What time of day is good to work the bands?

3) what calling frequencies should I be listening to(with a scanner)?

4) whats a good, cheap radio? I would prefer handheld, as I like to travel and backpack.

5) is it possible to make a decent antenna for apartment dwellers and/or backpacks?

Thanks so much for your patience. It has been a while since I've been on the air.

73's,

Dave

Dave,

with 6m, you'll need to have some patience for sure since the band doesn't open
up that often, at least not around there (EN61) near Chicago.
But when it does, you'll understand why they call it the 'Magic Band'.
Over the last two
years, I've been running an Icom 746 with a Par Electronics (www.parelectronics.com)
6m horizontal omni antenna at about 40ft off the ground. The antenna works quite well
and with 90 watts, I've logged 40 states and 6 countries including the Isle of Skye, Scotland.
Most of the traffic I've heard has been on SSB between 50.125 and 50.250.
My next goal is to get into digital modes on both 6 and 2m. Good luck and have fun.

SSB....calling freq. is 50.125

>2) Are there any propagation charts posted on the web? What time of
>day is good to work the bands?

Whenever it is open <<grin!!>>
Sorry, couldn't resist. Six tends to be very quiet except for summer months and winter equinox. Seems the band is beginning to open a bit. Look for some of the boards for 50mhz prop., such as the www.6mt.com board or SMIRK. Another one is:

http://www.iprimus.ca/~hepburnw/tropo.html

which is a tropo prediction site.

>3) what calling frequencies should I be listening to(with a scanner)?

Lots of guys try distant TV stations, such as Spanish/Latin American video freqs. When you can hear them, 6M may be opening up.

>4) whats a good, cheap radio? I would prefer handheld, as I like to
>travel and backpack.

Yaesu FT817. MFJ 9406X. Yaesu 690MkII. None are truly "HTs" but will give you decent output and receive. I've got one of the MFJ's.... I've had variable luck with other MFJ products, but I bought mine from Rick, K1BQT, the designer of the "TravelRadios", so it has all the bells and whistles....works well for me. Worked Nebraska the other day with the MFJ and a portable dipole.....S9 report back. There are a few true HTs around, but are more collector's items and command top dollar. I've borrowed an FT817...neat little rig and not much more costly used than the 690MkII's I've seen for sale. Probably will be my next purchase.

>5) is it possible to make a decent antenna for apartment dwellers
>and/or backpacks?

Two RatShak 72" whip antennas.... I had a piece of teflon and used it, drilled two parallel holes horizontally thru it, ran the whips thru & connected a piece of RG58 to the two ends. Drilled a hole in the center bottom to mount on an old remote flash stand (think telescoping camera tripod). Antenna only is 1 lb, easy backpacking antenna. Piece of fishing line will get it up in the air under a tree limb or between two trees.

Halos are easy, and the PAR (www.parelectronics.com) is an excellent omni antenna if you don't want to build. As you have a deck, you can get an extensible pole from Home Depot et al, and mount the antenna on top. Run it up when operating, pull back down when finished! Use bungee cords to secure it to a corner of the deck. This is my "travelling solution."

Hope to hear you on....do check the "rec.radio.swap" boards and eham.net as well as qrz.com. I've seen the MFJ's and the FT817s for sale for reasonable prices (i.e., better than eBay). Saw one MFJ sell for $90 just recently. Oops, forgot the Ranger 6M radio...if you can find one at a good price, not a bad deal....it covers the entire 6M band & has FM (tho no PL tones internally).

Cheers!
Andrew

6 Meteres has opened down South today.
Central America is outstanding right now.
TI, HP and V31.

It is a combination of TEP and Sporadic E. Hearing alot of
backscatter.

A channel 6 TV station in Mexico at time has been very strong here in
DFW, TX.

Unfortunately, no one has turned on a 2 Meter rig yet.
Someone make some noise !!!!!

Date: 2003-05-04 21:19:25 UTC
From: Dennis Kaylor
Topic: 2535 Message: 2535

hey guys
anyone know of a good yet easy to use antenna program?
i just got a 6 ele 6 meter yagi on a 30 foot boom with one element broke
and i want to shorten the boom and make a good performing 5 ele on a
15-20 foot boom this antenna has a T match driven element and the
elements are NOT insulated from the boom
so could someone tell me of a software to use or model it for me and
email be the element lenght and spacing and boom lenght?
thanks

2536. Re: 50mhz yagi design program

Yahoo group: 6meter (2000 — 2003)

From: Chris Boone
Topic: 2536 Message: 2536

Its been my experience that losing a director doesnt affect the
pattern that much above a 4 element yagi.....If you have a 30ft
boom and the front director is broke, I would suggest just removing
it totally and use the beam in the 5 el config as it is..maybe
shortening the boom to where the 5th element is attached..you should
not have to rematch anything as the #4 director (which the front one
on a 6 el beam is) is far enough away from the driven element to
not affect the resonance freq that much...yes you COULD gain an
additional .25db or so of gain or maybe 1-3db max of F/B ratio..
MAYBE.....after 3-4 elements on a yagi, I find little improvement
in a parasitic array when using more elements...
Cant hurt anyway....I once built a 4 element yagi on 6 based on
a 5 el design in an old ARRL VHF Handbook....the 4 element fit on
a 10ft boom....worked like a champ with a homemade gamma match...
and I didnt feel like it suffered any ill effects not being
optimized....(not bad for a 15 yr old kid then...and that was
30 yrs ago!)

From: w1nra
Topic: 2540 Message: 2540

After the tornados in West Tennessee, I would like to make the following suggestion to you all.
After trying to contact many of my relatives most of the day today to check on them as they live in the area of Lexington Tn to Jackson Tn, where most of the damage occurred, I found that some of the telephones indicated the lines were down or out of service. Most of them indicated they were ringing but nobody answered. This was due to and this is the reason for my suggestion. These telephones were the electronic models that require electrical power to operate. If you telephone has one of the power cubes that plugs into the wall outlet (AC), then you need to be sure you have at least one of the cheap phones that do not require power to operate otherwise you can not call out nor can you receive calls to your phone IF YOUR COMMERCIAL POWER IS OFF DUE TO STORM DAMAGE.
None of the powered phones or answering machines will work. Cordless phones also WILL NOT WORK if the power is off. So be sure you have one of the cheap phones or one of the old type phones that we all had in the past so you can make and receive calls during these power outages. Most of the folks I tried to call thought the phone lines were down when if they had one of these phones they would have had telephone service.

THIS COULD SAVE YOUR LIFE DURING OR AFTER SEVERE WEATHER IF YOU HAVE A NEED TO CONTACT RELATIVES OR EMERGENCY SERVICES SUCH AS POLICE, FIRE, OR MAYBE MEDICAL SERVICES FOR AN INJURED PERSON OR IF YOU HAVE A FIRE AT YOUR HOUSE.

These phones are cheap and you can get one at any Kmart, Walmart or RadioShack store for maybe 6 to 10 bucks. Pretty cheap life insurance.

Someone offered me a reasonably good price on a Ten-Tec 6N2 rig. I would really like to get involved in 6 meters, but I haven't heard much about this rig. Anyone have any experience with it?

Or for that matter, I would appreciate any suggestions that those of you who are well acquainted with this band might care to offer.

Thanks in advance for your thoughts on the 6N2 or suggestions on other gear that I might consider.

de James (N4EKZ)

2550. TenTec 6N2

Yahoo group: 6meter (2000 — 2003)
Date: 2003-05-08 17:55:12 UTC
From: Doug Smith
Topic: 2550 Message: 2550

Since there seems to be some confusion regarding the
6N2 here is information from the TenTec Website...

http://www.tentec.com/TT526.htm

Introducing the Ten-Tec model 526 "6N2" VHF
transceiver. Amateur radios' first IF-DSP multi mode
VHF rig.

GENERAL SPECIFICATIONS

MODES: CW, FM, LSB, USB
FREQUENCY RANGE: 50-54 and 144-148 MHz transceive.
136-174 MHz receive.
DISPLAY: 7 segment LED's for main and secondary DUAL
VFO's with SPLIT mode
OFFSET TUNING: +/- 10 kHz receive
FM REPEATER OFFSETS: standard for 6m and 2m.
Programmable for odd splits.
CTCSS: built-in, encode only.
MEMORIES: 100
ANTENNA: 50 ohms unbalanced, separate SO-239 output
connectors for 6m and 2m
POWER REQUIRED: 400 mA receive (no signal), 6A
transmit @ 12-14 VDC
CONSTRUCTION: 4 epoxy glass PC boards, molded front
panel, aluminum chassis, texture painted steel top and
bottom.
DIMENSIONS: HWD 2.75" x 8.5" x 8.75" (7 x 21.6 x 22.2
cm)

TRANSMITTER

RF OUTPUT: 1-20 watts, ALC stabilized
MICROPHONE INPUT: 200 to 50k ohms, 4 pin, front panel
connector accepts microphones with 5 mv (-67 dB)
output.
Polarized voltage provided at mic jack for electrets.
T/R SWITCHING: PTT on SSB and FM, QSK on CW.
METERING: forward power
SSB GENERATION: DSP generated

RECEIVER

SENSITIVITY: .20 uv typical for 10 dB S+N/N @ 2.4 kHz
bandwidth, SSB mode.
SELECTIVITY: 35 filters built-in; 200-1000 Hz in 50 Hz

steps, 1000-2800 Hz in 100 Hz steps.
S-METER: Calibrated to 50 uv at S-9
I-F FREQUENCIES: 1st I-F 45 MHz, 2nd I-F 450 kHz, 3rd
I-F 14.5 kHz

all specifications subject to change without notice

Priced at only $695 plus shipping.
Accessory items:

Model 937 11 amp power supply, $89.
Model 705 desk microphone $89.95.
The 526 is supplied with a standard hand microphone.

Nope, it is a multi-mode rig... CW, SSB, & FM. But
thanks for the suggestion on the Ranger. I'll try to
check it out.

i think that radio is 6 and 2 meters all modes isnt that the new one
from ten-tec
granted for $700 i would rather get a new icom 706 so you can have
HF/6/2/440 all modes

I think you'll find a pretty big difference between the Ranger and the
TenTec. If the price is within $200, take the TenTec.

Nope, it is a multi-mode rig... CW, SSB, & FM. But
thanks for the suggestion on the Ranger. I'll try to
check it out.

James

I thought someone offered him a good deal on a used one. I was asking what the difference was, not telling him. In my years of hamming, I've learned that if a few more bucks buys a better radio, go for it. TenTec makes one of the best radios you can buy. Sorry, no money tree here. Find someone else to attack. Hello,
Are you talking about Ten-Tec's transverter from 2M to 6M (I think
they have one of those)? Anyway, I do not have this particular rig, but
I do have Ten-Tec's transverter from 20M to 6M. I mostly listen with
it, but have transmitted a few times over the past few years with it.
It's mostly QRP or nearly so as I think the most you can put into it is
about 5 watts. 5 watts in with 8 out?? Does that sound right? Anyway,
I would recommend this particular rig. It was purchased prebuilt as no
one in the family has a whole lot experience with kits.

2559. Modification of PRO-2026

Yahoo group: 6meter (2000 — 2003)
Date: 2003-05-09 10:05:04 UTC
From: Carl
Topic: 2559 Message: 2559

I would like to use the front end and the I-F section of an old PRO-2026 scanner as a six meter (and more) converter tp feed my H-F receiver. I know it has been done with other scanners. The I-F output is fed through a resistor and cap to the H-F which is tuned to 455 kHz. This will allow copying SSB/CW and AM with all the available features of the H-F RX. I am using an old Heathkit SW-7800 for this.
I am returning to six after a 40+ year absence (due to a military career and raising a family) and am looking forward to operating again.
My current interest is antennas as I live in an apartment with all the "neat" little restrictions. Will let the list know about my sucesses (and failures!) as I go along.
Any help would be much appreciated as the local Radio Shack sort of smirked when I asked about a service manual.
Thanks in advance.

Carl - K0BZV

BTW: I also have a Uniden BC-350A which I am willing to modify.

Thanks everyone for your input. And I welcome any more that anyone as to offer.

Here's the deal. In just the last few months, I have gotten back into ham radio after having been inactive for several years. I've actually be continually licensed since 1976 when I got my novice call, WN6OYE. Since I have been back on the air, I have spent almost all of my time down in the CW portion of the HF bands. Speed still pretty much sucks though, at about 13-15 wpm. Still I enjoy CW which is sort of funny because last time around I spent most of my time on SSB and towards the end, vhf packet. But I digress.

I would really like to experience the magic band. Too bad I waited until after the last sunspot peak before deciding to do it, huh?!? Anyway, I own two TenTec radios now... the little Argonaut V QRP rig and a Jupiter and I love them both for different reasons. But we all know that just because a company makes a couple of really good rigs, that doesn't necessarily mean that all the rigs they offer are just as great. That is why I was sort of wondering if anyone had had any experience with the 6N2. TenTec sells this multi-mode dual bander for $695 which ain't exactly cheap! I have an opportunity to purchase what I am TOLD is a practically new one for $480. (It is literally a "brother-in-law deal".) I believe my brother-in-law when he tells me its condition, but still.... I'm just not sure about this is the 6 meter rig that I want.

If I didn't already own 2 hf rigs, both of which I like bunches, I'd seriously consider the Yaesu FT-100D or the Icom 706MKIIG. But why purchase yet another HF rig just for the 6 meter capability?

I have even considered purchasing TenTec's 6 meter transverter. The things only cost $109 as a kit or $159 fully assembled. One problem though... you have to be careful not to drive it with over 5 watts. I understand that you can enjoy some good contacts with only a little power, but just 5 watts? What do you guys that are on 6 already say about that kind of power? I guess I could always add a brick of some kind to it to get a little more power out.

You know... as I sit here typing this, I am wondering more and more if the transverter is the way to "taste" 6 meters for now. Any thoughts? Or would y'all rather I just slink away with my indecisive mush for brains thinking? LOL!

Thanks again for you input thus far,

James (N4EKZ)

Hummm... I didn't know that Ten-Tec offered a 2M to 6 M transverter, but it is the same 20M to 6M transverter that you have that I am considering. So thanks for the recommendation. If I do decide to go this route, I am seriously thinking about purchasing some sort of small amplifier for it.

Any thoughts? Or would > y'all rather I just slink away with my indecisive mush for brains thinking? > > LOL! > That's really not a bad idea. You can get a 6m amp and bring the power up if you really wanted to, and you'd get all mode 6m! If you're not real concerned with being able to monitor 6m while you're working another band, this is probably the best idea. You might also want to consider parting with your old boat anchors and buying an Icom 706 or FT-100D. I bought the FT-100D because I wanted all mode capability on 6m/2m/70cm, but all mode rigs for each band would have been more expensive than one FT-100D. =-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=- 73! de Andy KC2SSB (ex: KF4KHC/HL9HCT) Beachwood, NJ USA! And it is 8 watts out, with 3 watts in on 20M. I've worked the Caribbean w/10 W out, so when the band's open....! If you like homebrewing, there is a nice 10-100w amp from QST on the 6MT.com website. A transverter is a good way to get going on 6M....just DO make sure to turn power down before keying the HF rig, or use the transverter outputs which are on many modern rigs (check your rigs to be sure). I've used one, it has excellent receive, and the transmit is as good as your HF rig. Good solution to get started.

The TenTec 6N2 only offers 20W output, so not much difference. I'd like to find one for around $300-$350, but just don't want to dump $700 into a dual band rig, even one as nice as the TenTec. I can get a good FT100D or 706MKIIG for that money.

Cheers!
Andrew

2567. Power supply

Yahoo group: 6meter (2000 — 2003)
Date: 2003-05-13 11:17:23 UTC
From: George Clark
Topic: 2567 Message: 2567

I have a Astron RS-35M that went South! I use the supply to power my 2 meter,6 meter and 432 Amps. I have all my amps powered with this supply and use each amp when changing bands via my FT 736R. I had them all powered the other night and when I went back in the room the amps were all dead. I had power to the supply,with a little movement on the volt side but zilch on the volt meter. I checked the fuse and it was good according to my cond. meter. As I'm not a Electronic person , any ideas what the problem might be? Is there any other fuses inside?

Would appreciate any input!
Thanks in advance
George

George,

Another point to look at: Did the power supply put out 12VDC when the amps were disconnected and a new fuse installed? This will determine if the power supply truly went south or if one or several of the amps have done so.

Hmm...that means it will work better and cheaper than one which went North, right? <<grin>>

Probably a pass transistor failure. Try this page for info:

http://www.repeater-builder.com/rbtip/astronindex.html

If you try to repair it, make sure youu have no shorts to ground on the pass transistors and that the transistors are well attached to the heat sinks.

I have twice had the regulator chip go bad in my Astrons. I think it is an LM723 (but check that number.) It is available for a couple of bucks at Radio Shack. I keep a new one stuck inside the supply for when it happens again!

In a message dated 05/13/2003 11:08:57 AM Eastern Daylight Time,
ko4qr@... writes:

I have a Astron RS-35M that went South! I use the supply to power my 2
meter,6 meter and 432 Amps. I have all my amps powered with this supply and
use each amp when changing bands via my FT 736R. I had them all powered the
other night and when I went back in the room the amps were all dead. As I'm
not a Electronic person , any ideas what the problem might be? Is there any
other fuses inside?

==========

I suggest u give Astron a call===My 35 died about 10 years ago and it was out
of warrenty by about another ten---anyway the tech on the phone walked me
through taking voltage readings...then suggested a fix---that didn't
work--shipped the supply and they fixed it for FREE!!!!!!
My cost: time and shipping both ways! Because of my experience I'd buy
another Astron in a heartbeat!

my suggestion would be not to waste your time and effort unless there is
a 6 meter repeater that is active in your area
5 watts with an indoor antenna wouldnt have very good performance on FM
other than local stuff
good luck

Like Dennis said, probably not a good idea if you want to have any signal out.

>
Any suggestions? I am hopeing not to spend more than
> $15.

A perfect example, today I copied the N7LT/b in DN45 at 599+10db. This CW beacon is 600 miles to my northeast and transmits at 3.5 watts to a 1/4 wave vertical ground plane antenna. My antenna is 5 ele horizontal yagi, and even with the 20 dB loss from cross polarity, I still could hear the beacon with a 599 copy.

My suggestions Mark, build a 1/4 wave vertical since your radio is a FM rig. You can build one out of an old CB antenna from the junk yard, or simply solder one out of hookup wire and a SO-239 chasis-mount connector. Use a SWR meter to get it tuned for the lowest SWR. Start with the elements too long (~54-56 inches, you can do the math)and trim to tune it. Mount it as high and clear as you can, and feed it with some good coax, not that skinny little RG-58 junk. Your coax will probably cost more than the whole antenna, but solder your own and it isn't that expensive.

Then, get on the air and make some noise. Look for local repeaters if there are any in your area. If not, the FM simplex calling freq is 52.525, but I have made many more FM contacts around 50.300 when there are good band openings. Watch the DX loggers on the internet for activity, if you see SSB spots in your area, look for FM DX and don't be afraid to call CQ on the calling frequencies. It is also possible to work FM repeaters on FM DX. Many people monitor 6M FM while mobile and with the new multiband-HT's. Don't be discouraged by white noise, propagation on 6 really does happen, you just have to be in the right place at the right time.

Good luck the magic band!

2586. WX4NHC Hurricane Season 2003 On-The-Air Station Test - June 1st - Planned Frequencies

Yahoo group: 6meter (2000 — 2003)
Date: 2003-05-17 04:27:09 UTC
From: James Carlin
Topic: 2586 Message: 2586

I got this message on another radio mail list, thought some of you HF (and of course 6 meter) people here might want to try to talk to the NHC located at the campus of Florida International University in Miami FL. Sorry - the station does not operate on 6 meters, but they will be on HF. Feel free to give the station a call, in the event of a hurricane ANYWHERE along the gulf or Atlantic coast this station will be active, and this annual test is very much needed to check for non-functioning antennas/equipment.

-- James KF4OUI

Announcement from WX4NHC (fka: W4EHW)
Amateur Radio Station at the National Hurricane Center

WX4NHC Hurricane Season 2003 On-The-Air Station Test
Sunday, June 1st, 2003 9am-6pm EST (1300z-2200z)

We plan on using the following phone frequencies +/-QRM
Planned Operating Frequencies
1300z 3.911Mhz, 7.268MHz, VHF/UHF FM
1400z 14.325MHz, VHF 147.000 Rptr /UHF 442.350 Rptr
1500z 144.200MHz SSB
1500Z 14.070MHz PSK31
1700z 14.325MHz, 21.325MHz, VHF/UHF IRLP Node 9210
1800z 21.325MHz, 28.525MHz SSB
2000z 14.325MHz, 144.200MHz SSB

CW will be on 14.035, 21.035 and 28.035. PSK31 on 14.070.
(Times will vary)

Need to find us on HF, try using the DX Summit Web Site:
http://oh2aq.kolumbus.com/dxs/
Select "DX-Spots" 50, 250 or 1,000
or select "Spot Database Search".
We would also appreciate your posting in a DX Spot.
Select under "DX-Spots" Heading - "Send Your Own"

South Florida area VHF & UHF Repeaters & 146.52 simplex & 144.200 SSB
A separate announcement for SFFMA 147.000 Repeater Net will be issued.

Due to security measures,
NO VISITORS will be allowed at NHC during this test.

Please forward this announcement.

2595. New 6m repeater in the Kansas City Area.

Yahoo group: 6meter (2000 — 2003)
Date: 2003-05-20 15:18:58 UTC
From: Brian Short
Topic: 2595 Message: 2595

A new 6m repeater is on the air in Louisburg, KS, just South of Kansas City.

The machine is 53.13 - 1.0mHz with an optional 88.5Hz Tone.

It is a single site operation located at 422 feet on an old AT&T microwave tower, running 50 watts.

Please put us in your scanner, and check in when the band is up! (So far we have had several checkins from Florida)

OK with Field Day a month away I would like recommendations for a 6 mtr. antenna that can be built and left with the club for use on like FD or emergency settups.

Also if anyone has plans for a 6mtr. quad, That was along the lines I was thinking, What do you think :)

you cant go wrong with M2 6M5X its 5 elements on an 18 foot boom and all elements are 3/8diam tubing so its very light weight and high performance if you want a quad cubex makes a 4 ele and a 6 ele quad for 6

Brian,
is the "optional" tone just on when needed? is there a tone on the rptr output? Just curious.....What radio is the rptr? Duplexer? or split antennas? How's the noise at the site? Whats the call on the rptr?? ;)

A quad or Quagi would be good....even a plain on 3-4 element yagi
(keeps the boom below 10ft)....As for omni/GP, try a PAR antenna...
and a vertical if they want to go FM on occasion.

From: MadDrewski@aol.com
Topic: 2605 Message: 2605

During the week next week, you may want to listen a bit during the evenings (EDT) to the WNW. I'll be in Alaska and will be trying 6M maritime mobile. As I'll be only running 10W out into a homebrew HexBeam, just hope the (propagation) lady smiles on me!

If you check the grids, these are some of the toughest to get. I'll be sending the XYL out for lots of facials and massages so as to get time to operate!!! (cruise)

Hope to add a few rare grids to the logs.

Cheers!
Andrew

http://home.att.net/~Tom21988/tech/projects/6_meter_quad.htm

I'm currently building a quad much like this, only with sched 80 pvc arms instead of dowel. The whole thing'll take down into a 4' duffel bag for trips to the beach, along with a 16-20' PVC mast with polyester-rope guys. Stick an MFJ 9406 and a gelcell and some coax into the duffel and I'm all set for serious weekend fun :-). The article referenced in the above webpage also has plans for a super-portable 3 el Yagi made from collapsable whip antennas. Folds up right small!

And someone mentioned a vertical for FM? You can't go too far wrong with a basic plumbers-nightmare j-pole. I've got one up on the roof; took me an evening to cut and solder together, and 3 days later I was hitting New England from N Florida with that 10W MFJ :-).

Most likely you will overload the TV front ends if they are
watching 2...depending on several factors though..

1) signal level of TV 2 at the tv input
2) power out of your 6mtr xmtr
3) mode of operation and antenna separation
4) are the TV viewers off air or on CATV input? (goes with #1)

I can run 6 SSB and FM at 10-25watts and not bother my neighbors
but they are on cable...I pick up Houston's 2 off air...and yep,
I wipe out my TV screen everytime..

Here is why, as said before on this thread,
Power x Mode X Distance= amount of interference
SSB is better than FM
10 watts erp vs 100 w erp is better
no neighbors for 1/2 mile vs residential lots is better

If you have a long yagi you can point away from your neighbors

100 watts on FM to a dipole, your going to get everyone within a mile,
including your own TVs, Momma might get mad. It's not much different than
10M.
Even if they have cable, you get induced mutual induction on the signal.

I might hate myself for this when it comes to packing it but I've got 2 - IC251's the 2m all mode rigs in my closet. Both work, but each one has problems however you could take the 2 and make one good for sure. The one I always used all the time works great ssb/cw but the 120v power supply does not work. I always just used my big 12v power supply. The other one works great on cw but sometimes the ssb mode is distorted, its power supply is good. I used it to get on the old LEO Oscar birds. I believe I've got both manuals and power cords for them, I know for sure I've got one of their mikes and think I have the other one. They are fairly heavy so will probably cost a small bundle to ship so how about $300 for them, that includes shipping. I'm being 100% honest about them so if your interested let me know, other wise they will sit in the closet hi hi...By the way I'm trying to raise money so I can get a new rig and get back on 6m.

If you want an ultra-cheap, ultralight dipole, this is what I use for mountaintopping. A dipole made from RS rabbit ears with the 19" whips replaced with RS 72" ones. Pull out to about 54" and you are in business. I use aluminum tent-pole sections as a mast, on a light photography tripod. Poor man's Buddipole. And it works.

Heh....I'll second that! My ultralight portable is a block of Teflon drilled thru to accept the two RatShak whips & a section of RG58U connected w/small thumbscrews, the block has a hole underneath to sit on a lightweight tripod. I can use either the dipole or the homebrew HexBeam on the same tripod.

One of these days, I'll get some photos, esp. of the hexbeam, and post them. One of those projects for my spare time ((grin)).

I once built a 3 el 6meter quad for FD out of PVC and #14 house wiring. As I remember, the spreaders were 1/2", boom 1", and mast 1-1/2". The spreaders went onto the boom with 4-ways and reducers, and the 1" boom went straight thru a 1-1/2" 4-way about 2 or 3 feet down from the top of the mast, held in place with duct tape, of course, then used cloths line for yard arm type supports to the ends of the boom.

Another time I did a demi-quad, a single vertical loop, of 1/2" copper pipe. I soldered mine but don't see any reason why you couldn't lay it together, drill 1/8" holes thru where the elbows join the tubing, and slip some #12 copper wire thru the holes to hold it together. That way it'd be easy to (dis)assemble in the field. I cut a 1/2" notch in the top of a 1-1/2" PVC mast and the loop hangs in it. Used duct, of course.

Well finally a small opening here in Cortez, Colorado. It was short opening and time - about 10 minutes - I was mobile and hearing Texas. At least I know things are working and the band will open again. Did I make contact? NO the band 50.125 USB was jammed with callers and me without my amp so only had 10 watts and was covered by the big boys. I am still jazzed as this was the first opening since I have been monitoring for about 2 months. I will be traveling to San Diego for two weeks from evening of June 12 to 23 and will be scanning 6 - 2 -440 and 20 Meters.

I will be traveling to San Diego for two weeks from > evening of June 12 to 23 and will be scanning 6 - 2 -440 and 20 Meters. > 73 Johnny The trick is when you hear all those bozo's hanging on 50.125, tune up a bit, to 50.130, .135, etc (5khz increments is a good rule of thumb) until it's clear, then start calling CQ over and over until others start calling you. When it's evident that the band is open, it's a bad idea to hang on .125 since people don't seem to understand the concept of a "calling frequency". Also try tuning up, to around .200. Sometimes you'll find ops higher up, around .170 or so. When there is no evidence of a band opening, listening to 50.125 is a good idea, and calling CQ every once in a while never hurts. I usually will listen with the squelch turned up just above the noise so if anything does come on the frequency, I'll hear it, but I don' t have to hear that annoying hissssssing. =-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=- 73! de Andy KC2SSB (ex: KF4KHC/HL9HCT) Beachwood, NJ USA! I am one of the promoters of SMSCLUSTER service.

SMSCLUSTER service provides you an unique, exclusive and innovative way of receiving DX spots from the world packet HAM cluster directly to your cellular phone or pager, via SMS or e-mail, wherever you are, without the radio network or Internet!

With a complete set of DXCC/IOTA filters and settings you will receive only the desidered spot, with very small probability of faults!

ALL MODES (SSB, CW, RTTY, PSK, SSTV, SAT, EME, FSK441, JT44, JT6M, HELL, SITOR, AMTOR, AM, FM) AND BANDS (136 kHz / 1.8 / 3.5 / 7 / 10 / 14 / 18 / 21 / 24 / 28 / 50 / 70 / 144 / 220 / 430 / 900 / 1200 MHz / GHz up 1200 Mhz) ARE SUPPORTED BY THE SMSCLUSTER SYSTEM !

Please visit the pages at http://www.smscluster.org to discover more about this free service, to register yourself and to use the SMSCLUSTER, the new frontier of DXing!

And please do not forget to leave a message into the guestbook. Thanks!

IZ5ENH (SMSCLUSTER crew)

SMSCLUSTER is an experimental service. Please report any problem or comments to info@.... Thanks for your cooperation!

Well still stone cold quite here in CM87.
Can barely hear the beacon on 50.7 in Los Altos and that is about 40 miles away as the crow flys. Trying hard not to be discouraged.

Well finally a small opening here in Cortez, Colorado. It was short opening and time - about 10 minutes - I was mobile and hearing Texas. At least I know things are working and the band will open again. Did I make contact? NO the band 50.125 USB was jammed with callers and me without my amp so only had 10 watts and was covered by the big boys. I am still jazzed as this was the first opening since I have been monitoring for about 2 months. I will be traveling to San Diego for two weeks from evening of June 12 to 23 and will be scanning 6 - 2 -440 and 20 Meters.

Subject: Re: [6 Meter Sked] Quickie FD antenna

I once built a 3 el 6meter quad for FD out of PVC and #14 house wiring. As I
remember, the spreaders were 1/2", boom 1", and mast 1-1/2". The spreaders
went onto the boom with 4-ways and reducers, and the 1" boom went straight thru
a 1-1/2" 4-way about 2 or 3 feet down from the top of the mast, held in place
with duct tape, of course, then used cloths line for yard arm type supports
to the ends of the boom.

Another time I did a demi-quad, a single vertical loop, of 1/2" copper pipe.
I soldered mine but don't see any reason why you couldn't lay it together,
drill 1/8" holes thru where the elbows join the tubing, and slip some #12 copper
wire thru the holes to hold it together. That way it'd be easy to
(dis)assemble in the field. I cut a 1/2" notch in the top of a 1-1/2" PVC mast and the
loop hangs in it. Used duct, of course.

73,
Jay - AA8QQ

hey guys
i have converted a cushcraft 617-6B to a A50S-6
using the spacing and element lenghts for the A50S the only differnce is
i am using a Tmatch instead of the gamma match
would anyone know how to tune the Tmatch to handle the closer spacing of
the A50S
using the Tmatch with the element lenght from either antennas plans the
SWR is lowest SWR is 1.7:1 at 52.000
any info will be a great help
thanks

, central and a few openings into no. cali in the past 4 months.....probably when you were at work.....

keep the radio on and add an omni directional ant to your station, i added a verticle and phased halos, i seem to find 3x the openings as i used to with just a beam.....

Topic: 2633 Message: 2633

I'm prepairing to get back on 6m with a FT-817, hopfully in about 2-3 weeks I'll be putting DN84lc on the air. Now if you had your choice which of these 3 antennas would you put up? A Vertical? A Dipole? A Halo? Antenna will only be about 15 ft up for now, maybe later I'll put a beam up. So of the 3 choices what one would you do?

Jerry,
In South Dakota, try the dipole facing East and West. You will have a bit more gain but lose some directivity over the halo. Who is north of you ? What is south of you, Texas ?
If you do not securly fasten the dipole, the wind might spin it around resulting in an omnidirectional antenna. Don't bother with the vertical unless you will be phasing a couple of them.
Steve, NU7T

2636. Re: [6 Meter Sked] Which One?

From: Dennis Kaylor
Topic: 2635 Message: 2636

well since you are shooting yourself in the foot by going QRP and a low antenna to boot i would suggest a pair of halos atleast you would get some gain out of them
or get one of those 50mhz-1300mhz logs they aint cheap but look enough like a TV antenna that most CC&Rs wont know the differnce
remember if you go QRP you need to add antenna gain you will get people coming in saying they worked the world on 1 watt and a G5RV but that was on one of the few times the band is WIDE open most of the time when 6 opens its very sporatic and very weak so if your serious about 6 meters spend money on an antenna if your not then go with a homebuilt dipole and beat your self in the head cause the guy down the street is working DX and all your hearing is him
good luck

In my opinion since you are only able to go up 15 feet I think a ground plane with 3 or 4 radials would be best. If you have a 5/8ths antenna it might perform better if you happen to be on a hill top as I am but a ground plane served me well till I went to a 5/8th Diplomat 6 made by high-gain which has been on my 38 foot tower since 1969. I tossed one of those together quick-and-dirty like, just clamped a couple
of those 72" RS extendawhips to a block of wood with coax cable staples,
more as a proof-of-concept than anything else. Next step is to figure out a
strong, repeatable means of putting 'em together and taking 'em apart, so I
can stuff the antenna bits and the MFJ and a sealed battery into my backpack
and set up out behind the office during lunch hour :-).

I just got back from a weekend at the beach, were I used a fairly similar setup - a 2 el quad made of PVC pipe and #14 wire, along with a PVC mast (16' was too flexible- it bowed into a nice U-shape before snapping apart at one of the joints! - 12' was much more stable), an MFJ-9406 and a couple of scavenged UPS batteries. Worked EM20 and some other fun places from Indian Rocks Beach, FL (EL87). Next day or two I'll post a url for pictures of the antenna building and the beach operation.

Lots of people wandered by, stared at the antenna and said, "What IS that thing?". Good PR opportunity for ham radio :-). Good opportunity for a sunburn too, but I digress :-). Only problem I had was that the top set of guy rops was too high on the pipe- they interfered with twirling the quad around.

I think for Field Day I'll get a bunch of 5' steel mast sections from Lowes (and cut 'em down to 4' so they fit in the trunk of the Honda :-)) to use instead of the plastic, so I can guy it down further to clear the quad.

Things to pack for Field Day:

a folding table/tv-tray/somesuch
headphones
lots of water bottles and snacks
doublesided velcro - good for securing all sorts of cables and stuff
quickie j-pole or vertical for 2M FM
enough wire to do power connections for *all* the radios, not just *one*
a sucke- er, kind soul to help erect the antenna(s)
sunscreen (ouchie!)

Interesting idea, but don't think it'd fly. There's not all *that* much ground clearance under my Honda, and there are a bunch of REALLY big speedbumps in my neighborhood. And too, I had as a major goal the notion of collapsing the tower, the quad and the radio into a 4 or 5' long duffel bag to make it easier to cart around or grab in an emergency.

Don, You will interfer if the people are trying to receive the station on rabit ears or the antenna that comes with the tv. In othwer words if their signal is weak so the tv is trying to amplify all it can. Under these circumstances it will receive you not because of your equipment being at fault but due to a poor design piece of cheap consumer equipment.However on cable you shouldnt present any problems. I have something that fit into the trunk of my old 1987 Honda, and when set up reaches 20 or so feet. My set up can be set up in minutes by one person and could be stored in the trunk while leaving space for all kinds of other stuff. My cost was...well nothing because I had all the stuff to make it scattered about.

OK so you want to know exactly what the heck I have huh? The mast is a "hot stick" that the local power company was going to toss out. for those who do not know, a hot stick is a device used by power company field workers when they need to throw switches located near live power lines. The stick is made of fiberglass and is collapsible. The sections are 4 - 5 feet in length. When extended the pole looks kind of like a large fishing pole.

To hold the stick, I created a clamp like device which I can park a vehicle on. The weight of the car holds the stick up, without needing any guy wires. The clamp device is made out of part of a trailer hitch for a 86 Buick Regal (this is the part I park on top of), welded to a short section of steel that looks like it used to hold up a road sign (this is 1/2 of the clamp). The other half of the clamp is a section of angle iron. The clamp is held together by 2 bolts, "jack stand" chain, and wingnuts. The chain and bolts are attached to the stand, the angle iron is not. I even put some JB Weld on the end of the bolts to prevent loss of the wingnuts.

To set the device up, all you do is stop the car, remove the clamp from the trunk, park the car on the base, remove the stick, loosen the wingnuts, slip the angle iron into the chain, slip the collapsed stick in-between the angle iron and the base part, then hand tighten the wingnuts. Easy huh? This device has been used many times for public service events, as well as for emergency drills and even just for the heck of it.

Now if you do not have a lot of junk scattered about, and you do not know anyone who can get you a hot stick, you CAN buy a similar setup. The base part is marketed under the name "Bigfoot" and there are a few places where you can buy collapsible aluminum poles. Of course you will spend $200 and up (depending on the pole length) for everything.

I have included a photo attachment of the whole device minus the car. The red parts are the clamp and base, the yellow thing is the hot stick.

Well it seems my photo attachment was removed from the message before I could post it. If anyone wants to see the device go to the following link!

www.qsl.net/kf4oui/mast/mast.jpg AND
www.qsl.net/kf4oui/mast/mast2.jpg

mast2.jpg was taken during the construction phase of the project so the hot stick is not pictured, but you get a good idea of what the thing looks like when set up. Mast.jpg is a close up of the finished base with hot stick.

2671. Which 6m antenna?

Yahoo group: 6meter (2000 — 2003)
Date: 2003-05-30 16:36:28 UTC
From: vhfradiobuff@aol.com
Topic: 2671 Message: 2671

I am considering buying an FT-8900 and if I do, I've been trying to decide if I should get a triband antenna or use a duplexer with my current dualband antenna and buy a 6m hamstick. The cost difference is less than $20 if I get the hamstick, when you throw in the cost of the mount for either antenna and the duplexer. The triband antennas I am thinking of are either the Comet SB14 or the SB15. If I get one of those, I might go for the SB14 because of the shorter size. According to what I've read, the gain on 6m on both antennas is the same, with the SB15 showing more gain on 2m/70cm, but I'm not real concerned with gain on those bands. The mounts I'm considering are the Comet CP-5M or the Diamond K400C (or 3/8c for the hamstick). Any opinions? =-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=- 73! de Andy KC2SSB (ex: KF4KHC/HL9HCT) Beachwood, NJ USA! >SNIP<

I'm in the same boat! I'll be getting the FT-8900R tomorrow, and I've decided on the SB14 because of size. If you stop by eHam.net at http://www.eham.net/reviews/detail/1541
you'll find reviews of the SB15, with the SB14 snuck in by one person. The specs for the SB15 say gain on 6M is 2.15dBi and SB14 say gain on 6M is 0, by the way.

I'll probably get a mag mount, because we'll be switching the radio/antenna between cars, and the 43-inch antenna will fit nicely on the trunk.

Good luck and have fun!
Phil

Hmm.. on Universal Radio's website, the gain for both the SB14 and SB15 is listed as 2.15. Where did you get the gain figures? Maybe Universal Radio's website is wrong. I wouldn't recommend using a magmount for a triband antenna not because of the size, but because of the likely construction of one. I haven't seen either the 14 or 15 up close, but I'd guess they are fairly rigid, not good for a typical magmount. =-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=- 73! de Andy KC2SSB (ex: KF4KHC/HL9HCT) Beachwood, NJ USA! I can't give a direct URL, because the site is constructed on the fly by php, but go to
http://www.natcommgroup.com/index.php
and select the link for triband mobile antennas under Comet.

Hmm... . I'll talk to the folks at HRO about it when I go in tomorrow to pick up the stuff. It's easy enough to get a trunk mount instead, just more work switching cars. Maybe we'll get two mounts.

2682. What kind of connector on the FT-8900R?

Yahoo group: 6meter (2000 — 2003)
Date: 2003-05-31 22:49:46 UTC
From: striplingp
Topic: 2682 Message: 2682

Hi, guys,

I'm trying to get my new 8900R set up so I can use it at home and in the car -- I've never used 6M before, and radio is burning a hole in the carpet waiting for me to set it up. :->

There is a connector from the power cord connected to the car battery that connects to the pigtail from the radio, and I'd like to get another connector so I can run the radio from a Gel cell at home. Is this a proprietary connector? I've never seen one before and can't locate one in my catalogs or on the Web.

Still working on putting it all together...
Phil

If you want the BEST 6mtr mobile use, forget a vertical...get a PAR antenna and run it on the roof....your LOCAL or non DX coverage will love you for it....if you run vertical, remember you will have 20db+ difference in signal strength......of course if the band opens, thats another story....vertical for FM are fine...but for BEST SSB, use a horizontal omni antenna...

Today, I worked KM5TY who was headed out of Houston toward Austin... I have a CP (Circular Polarized) antenna at the house but only up 30ft...he was running 100watts mobile into a halo...I kept hearing him call CQ long after we signed in our QSO...he must have gone another 30-50miles before I lost him....could not do that if we had been crosspoled!

ANYTHING less than a 1/4wave is less than 2.15 dbi anyway (remember
that i is Isotropic....not dipole referenced)....
I hate it when they use dbi.....always deduct 2.15 to get dbd which
is truer gain and more realistic..

The FT-8900 is an FM only radio. Besides, once your signal hits the atmosphere, polarization means nil, so polarization only matters if you want to talk line of sight or ground wave. =-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=- 73! de Andy KC2SSB (ex: KF4KHC/HL9HCT) Beachwood, NJ USA! If all antennas use the same measurement, no matter how accurate or inaccurate, I can at least tell that an antenna with a lower number doesn't perform as well as one with a higher number. For all I care they can make something up like the antenna's googleplex index is 3 and the other googleplex index is 4. If it's more favorable to have a higher googleplex index, then I'll buy the second antenna! :)

The Par antenna is a good investment, but in my situation when it
rained, the SWR went too high.
I'm now running a 6m loop from www.kb6kq.com and no more problems with
high SWR
on rainy/damp days. Also, the Par is rated at 160 watts while the kb6kq
loop
can handle 750 watts and has a greater bandwidth.

Bingo! Although they don't have what I was looking for (just the connector), they do _better_. They have the connector on a cable to a cigarette lighter plug -- exactly what I need to plug in to my Gel cell.

Thanks, indeed, Jock.

Hi, George,

I'm in the market for a 6M antenna to put in my attic and was considering the Par, although I was hesitating because of it's stated bandwidth. The kb6kq.com site doesn't give that information, at least not where I could find it. Rain in my attic _shouldn't_ be an issue, but I am interested in an antenna that covers all of the band, as I'll be using it on local repeater more than for DXing.

My attic is too short for a vertical, so a loop looks like the way to go. Are there any resources for bandwidth comparisons or even a spec somewhere on the kb6kq loop?

I forgot the 8900 is a FM only quad band...(Cmon Yaesu it doesnt
cost that much more to make it all mode nowadays!)....

SOOOO if thats the case, get a Larsen NM0-150 and you have 6 and 2
together....and wide band coverage over the entire 6 mtr band...
(enough to cover 51-54 MHz and even 50.3 for those "oddballs" on
FM along the west coast...lets see if they can take that joke :)=

But seriously, unless they make a 4 band antenna that covers
10, 6, 2 and UHF (and someone like Comet or Diamond probably does..
I just havent seen their latest catalogs! :), use the Larsen.
It works! You WANT the best antenna for LOCAL use anyway....
True, when the band opens, anything goes...but when its NOT, use the
best you can get...especially to talk to a fellow ham down the road OR
that "local" rptr that doesnt hear all that well...

Yes, they do make one now. I think it is sold under the Comet brand, as advertised in CQ Magazine.

Phil,

if you checkout www.parelectronics.com, it should have the specs posted.
Having used the
Par for 2 years now, it's performance is very good if you keep in mind
it's power rating
and SWR will go up in rain/damp weather. My other reason for switching
to the KB6KQ
6m loop was it's higher wattage rating. Currently I'm using the Par 2m
stacked for additional
gain. I've only had the KB6KQ 6m loop for almost a week, but have
noticed better
quality materials and workmenship then the Par. Another reason for the
switch is that the
matchbox part of the Par antenna apparently contains a capacitor which
in my case failed.
The matchbox was replaced at no cost to me, but the KB6KQ antenna I'm
told doesn't use
a capacitor in their matchbox.

Diamond does make a quad band antenna, however, I will be buying either the Comet SB-14 or SB-15 antenna. They are triband antennas (6m/2m/70cm). The SB-15 has slightly higher gain than the SB-14 and is longer of course. Since I'm a tech I won't be on 10m. If I do upgrade, I'll buy a duplexer and use a seperate 10m antenna.

Don't forget, a horizontally-polarized antenna will greatly decrease your performance with the vertically-polarized repeaters! You'll theoretically lose about 20 dB.

A loop in the horiz plane is omni horiz in coverage...you COULD
turn it vertical but then you have a bi directional pattern in the vertical
plane.....(think figure 8)....you can use the loop on FM but the antenna may need to be
retuned there as they normally are for SSB use and tuned to the lower part of the band.

All of which means somewhat less than stellar performance. MFJ has a 6M vertical with groundplane which will fit in my attic, so I'll go with that. Sigh. The vicissitudes of high-density housing.

hey steve
i too am in florida i am in lakeland
in order to suggest a radio and antenna we would need to know what you want to do?
that antenna you mentioned at best is a comprimise any time you have one antenna doing more than one band it isnt as efficent as a monoband antenna but if all you want to do is get into local repeaters i am sure it will do okay
as for the radio again we need to know what you want to do and how much you can afford to spend
i would suggest the Icom IC706MkIIG it is HF/6/2/440 all mode
that way you can pretty much do what ever you wish to do granted its $720 but its the best bang for the buck if you cant afford that check out www.qth.com and look at there classified ads and look for a dualband mobile radio and a power supply something with 50 watts on 2 meters that way you can get into all the repeaters in the bay area
good luck

Hi, Steve,

I assume you're a would-be Technician? That's what I am, and I assume you passed the test and are waiting for the results. Check http://www.wm7d.net/fcc_uls/ for callsigns issued daily. Use your address to find yours. Good luck! :->

> I want to install one antenna for vhf/uhf, and purchase a rig (cheap) for the same.

I have a Diamond X-50 base antenna which works fine on 2 meters and 70 cm. I bought it used from another ham; always in his attic, and now in mine. Dang those condos! I suggest finding a local ham club and finding out about sources for used gear from them; also read reviews at http://www.eham.net/reviews/ to get ideas of what works well.

I have to say though that a "cheap" rig will be a problem. I have bought a cheap handheld, and it was a waste of money. One of my new ham friends also bought a cheap handheld, and he's quite unhappy. Luckily for me, I can afford the mistake. My friend can't, though, and he's stuck with a radio he pretty much can't use. I suggest getting friendly with hams in your area and doing much homework before you spend money on a radio -- maybe buy used gear.

> I saw an antenna at www.radio-ware.com. It is an Austin Antenna 4 band surburban onmidirectional 118" fiberglass base station antenna for 50/144/220/440mhz. Does anyone have any experience with this antenna ? How about suggestions on my first rig !

My question is what bands are you going to be operating on? I use 144 and 440, so I have a dual-band antenna that works those frequencies. Does your housing development or apartment have antenna restrictions? I live in a condo association which prohibits outdoor antennas greater than one-foot -- it allows satellite TV dishes, but not much else. (Hence my attic antenna.) There are a lot of 6 meter repeaters in my area, so Louise and I got a radio Saturday that runs 6M, 2M, and 70cm, and a tri-band antenna for it for the car. Haven't got the power cable installed yet, but the radio is up and running in our home with the dual band antenna on 2M and 70cm and looks good at those frequencies.

This is a _great_ group for 6M, and I'm sure you'll get lots of feedback. Much of it is above _my_ level, but you'll get to make that judgment for yourself. :-) Do a lot of research before you commit all

your bucks on your first rig.

Phil

Steve,
How about the yaesu ft-8900r. It is a quad band 10m/6m/2m/70cm radio for less than $400 to your door. I am working on my general so I can't use the 10m side yet but hopefully soon. It has worked great for me. It is remote mountable. I made my own seperation cable so I haveit on one side of the room and the head/mic over by my pc's so i can ragshew while surfing or working.

Hope this helps....

it's power rating
and SWR will go up in rain/damp weather. >>

Interesting...mine has been up for the past year or so, never noticed any difference wet or dry. I've been running 100+ watts into mine, also. VSWR quite low, I only operate SSB on the PAR. I've got a Jpole for FM, so no need to push the PAR. My homebrew HALO has similar characteristics to the PAR, esp. on bandwidth. Low Q antennas will have broader SWR ranges than high Q antennas....I'd rather have two high Q antennas up rather than a single low Q antenna.

For what it's worth!!

<< Here's a quote:

Frequency range 50.0 to 50.3 MHz

Our repeaters are at 52.xxx -- and another poster has pointed out that

loops are polarized at 90 degrees to repeater verticals. Sigh. >>

Build a Jpole for the repeaters......build a HALO for SSB. Two sections of coax and an antenna switch will get you going. If you forget to switch antennas, you shouldn't see such high VSWR so as to damage the rig. If you're limited in external applications, as am I, stash the Jpole in the garden with a birdhouse on top (zero comments from the neighbors so far!!). Mine sits on the ground rod for the shack....it went down 7 ft before hitting rock....so the antenna is up only a foot off the ground, but still does ok. Birds don't seem to mind the RF....none have complained to the FCC as of yet! DON'T FORGET TO SEAL ALL THE EXTERNAL CONNECTIONS!!!!! Oftimes the high VSWR noted during humid weather is due to connections, not the antenna.

Just to let the group know that there will be a hamfest in Winston Salem, NC this weekend. Location is at the Winston Salem Dixie Classic Fairgrounds off Highway 52, just north of I-40 and Business 40 intersections in Winston. It is about 20 min from Greensboro, 1.5 hrs north of Charlotte. Not big, but normally has good attendance. I'll be there with some 220 stuff, and a 6M AM rig. Talk-in will be either 145.47 (-) 100hz PL or 146.64 (also (-) and 100 hz PL). 6 am to 1 pm are the times.

Cheers!
Andrew

Welcome to ham radio!

The first thing you need to consider is what band(s) you plan to work. You need to find out from other hams which bands are used the most in your area. Once you know what band(s) are active, you can look for a radio and antenna. If all the activity is on one band, you might not even need a dual band radio.

Anyway if you do happen to get a vhf/uhf radio and need a dual band antenna for it, look up the crustcraft AR-270. This antenna is not too big, under $100 brand new, and fairly common so you can probably find one used. They are also rugged antennas, able to put up with some rather harsh weather conditions. They are also simple to tune and install. In short, for local repeater use it is hard to beat the AR-270.

Do not worry about 220 mhz, there is not a lot of equipment for this band and as a result there is not very much activity on this band.

-- James KF4OUI

I am a new ham, took my test 5/17, still waiting for call sign, and need some advice.
I want to install one antenna for vhf/uhf, and purchase a rig (cheap) for the same.
I saw an antenna at www.radio-ware.com. It is an Austin Antenna 4 band surburban onmidirectional 118" fiberglass base station antenna for 50/144/220/440mhz. Does anyone have any experience with this antenna ? How about suggestions on my first rig !
Thanks, Steve ....St. Petersburg, FL

2731. Antennas for 6m and FM vs SSB

Yahoo group: 6meter (2000 — 2003)
Date: 2003-06-05 18:01:24 UTC
From: Bill Peacock
Topic: 2731 Message: 2731

I have worked quite a bit on 6m and the contacts in my log are just about evely split between a vertical (Commet GP15) and a 6m log periodic. When working the SSB openings, it does not matter whether the antenna is verically polarized or horizontally polarized because after one bounce, the signal is not polarized at all. That's why many HF DX'ers use verticals for DXing (that and the lower take-off angle). If you are going to be working local FM repeaters, it is a different story. For them you will need to have a vertical.

Several of you have been toting the FT8900R. This may be a fine rig, BUT, it is FM ONLY. On 10m there are a few repeaters around but the vast majority of 10m work is SSB. The bulk of 6m DX is SSB. There is very little FM DXing because FM doesn't carry too well. For a few dollars more you can get a FT100D, FT 857, ICOM 706MK?? or my personal preferance the FT897. These are HF, 6m, 2m and 440 rigs that will work any mode known to mankind. Right now in my shack I have a FT847 (HF, 6m, 2m, 440 all mode), FT817 (QRP all bands all modes). Both rigs work fine and I have no complaints.

Before you buy a rig make sure it will work in the modes that you want to work. Just because it is 6m and/or 10m does not mean it will work SSB.

Just my 2cents.

73,
Bill
W5WJP

Right now in my shack I have a > FT847 (HF, 6m, 2m, 440 all mode), FT817 (QRP all bands all modes). > Both rigs work fine and I have no complaints. The reason some people may prefer an FM only rig in the car is because they don't want the hassle of having to try to tune in SSB signals while driving. I personally don't like to fiddle with my radio when driving.The FT-8900 sells for $390, considerably less than a new FT-100D or an Icom 706MkIIG. There's DX to work on 6m and 10m FM. Just listen to 52.525 during the openings and you'll see. I worked a mobile station in WA state on 6m FM once with only 25 watts. The few repeaters on 10m is enough because you can work them from all around the country. I've heard a 10m repeater in Texas on several occasions from the home QTH. That might be what someone wants to work from the car - being able to work "DX" without the hassle of tuning in signals on SSB. Just remember, not everyone can be a "big gun" or can afford the $700 or $800 for an HF+ rig. =-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=- 73! de Andy KC2SSB (ex: KF4KHC/HL9HCT) Beachwood, NJ USA! This is absolutely true, and I think it needs to be said.

Let me tell you why I chose the 8900R: it appears to me to be the best value for 2M/70cm dual band radios. I have a Tech license and can't use the 10M band; the 6M band is something I _had_ no interest in, but turns out to be very helpful in my area because there are many 6M repeaters where FM and vertical antennas are just the ticket.

I compared the 8900R with other 2M/70cm mobile radios, and the 8900R gets the best reviews on restraining intermod and ease of use. It works well with my wife's VX-5, is a true dual bander, and allows cross band repeating. Our primary use is in 2M/70cm, but notice that I'm here now learning about 6M.

If I had wanted to DX on 6M I agree with your analysis of the radio -- it's not the right one for DXing. If I had a general or higher license, I might be interested in the all-mode radios you mention. As it is, the 8900R is an excellent radio and the best value we could find for a mobile/base 2M/70cm radio.

I think your entire analysis is absolutely correct so long as that caveat at the end actually applies in both directions: If I want to work only FM, an all-mode radio is not what I need, so I should be sure the radio I buy fits my needs and works the modes I want to use.

From: m_sabal
Topic: 2731 Message: 2736

I've been using it for about 9 months now, and I love it. I'm antenna-restricted, but I'm slowly learning ways to give myself a boost. From Southeast PA, my 5 watts into a bedroom loop has worked Mass. on 40m (I'm not too proficient in CW, so I don't TX on 40m much), Toronto on 20m USB, and Wisconson on 17m USB. During the last major band opening on 6m, I could hear Oklahoma 59, but could barely hear local stations at all. Unfortunately, the band closed before I could break through the pileup ;-(. My biggest struggle on 6m with this rig is the antenna. When other stations are declaring 58 or 59, I can barely hear them at S1. As for 2m and 70cm, I used 2m with a 100W amp and 70cm barefoot into 3 el. beams at second floor level. Both bands performed excellently in the January VHF contest.

I like the rig, because I like to be able to go camping and work without external power; although I've heard about a few folks taking some portable external power along -- I'm not sure what, though.

However, as much as I like the rig, if your primary use is going to be 6m, I would recommend a rig with at least 100W output. 6m isn't open enough or long enough to tolerate QRP. On the other hand, if your area has a few active 6m repeaters or and active group on 52.525 (unlike around here), 5W with or without a brick should be fine.

Good luck & 73,
Mike kb3gjt

<< 6m isn't open enough or long enough to tolerate QRP. >>

Well....you will probably get a few comments about that. I run mobile 6M (rover) as well as semi-QRP portable...8-10 w out from the MFJ 9406. Works fine, lots of contacts. This includes Grand Caymans mobile rover, Ecuador, Colombia, etc. Antennas mean alot, the PAR omni is up fairly high at the house (no yagi...CC&Rs), but with a Yagi or quad and 5-10W, you WILL be able to do quite a bit. I have 160W available when needed, but oftentimes use the 10-15W out of the Yaesu (FT736R) without a problem.

Now, to be fair, when the band is marginal, 100W and a 5 ele. beam are just about mandatory, so I agree with that. Just don't stay off of 6 meters just because you don't have 100+ watts!

Cheers, and waiting for YOUR grid on 6M!!

Thuis is true. However, I have seen used FT-100s go for about $450. You would also have the advantages of DSP, in addition to the other bands and modes.

And a used FT-8900 could be had for $275 - $300. A difference of $175 to $150... Not everyone wants used equipment either. I prefer knowing I have a warentee and I know what I'm getting. A new FT-8900 is $390. A new FT-100D is around $700 or $800 (not sure of the current price. Also, $450 for a used FT-100D would be from someone not knowing how much they can get for an FT-100D.

Bruce...

What did you use for a baseplate to support your PVC mast.

I'm planning a trip like yours to the mountains. I will be at 6700' in the Sierra Nevada Mountains. I am guessing I will be in grid CM99. I will be using 6 5' sections of Radio Shack steel mast using two guy points and 4 guy wires. Antennas will be a Cushcraft
3elm 6mtr beam and a 2mtr log periodic. the rig will be a IC-706. the dates will be
7-6 through 7-11..

Hope to get some nice contacts...

I missed the original post, but I can tell you what I use for a mast support/baseplate

I have a 2x2ft square of 1/2 in plywood with a 1 1/2 in pipe flange mounted in the center, and small holes drilled into the corners of the square. There is a 2ft long piece of pipe that therads into the flange and I just slip my portable mast (really a fiberglass & aluminum painters pole extension) into the pipe.

The whole thing is secured to the ground with long tent spikes that I hammer into the corner holes. I have left it up for as long as 2 weeks with wind and rain (the past 2 in fact ...) without any problems.

Hello steve,

I used 2 dipoles on 6 meters but not a long wire, the dipoles I used was the shorter ladder type G5RV and later picked up a Daimond W215S <6m/15m> in Japan last year and it worked like a champ. Been thinking before this of putting up a directional beam.
The later one I worked India and also Mongolia off it from my place in Manila.

The base was a 4" to 2" cleanout adapter. I glued a 2" to 1-1/4"
adapter into it, into which I screw the bottom section of mast. The
underside of the 4" piece has a kind of concave surface, which gives a
bit of an "edge" that digs into a sandy or soil surface nicely; it
doesn't slide around much at all, but will still turn so I can
"armstrong" rotate the antenna.

I'm hoping to get into a similar position in the Blue Ridge beginning of
August, though I'm having a hard time choosing what to do on my "day off
from Dad-ing" on our vacation - mountain-topping or chasing freight
trains up and down CSX's old Clinchfield line. :-) Heck, maybe I can
work in both. :-)

I'm going to go for the steel mast sections in place of the plastic (or
in addition to, if I go someplace long enough to warrant setting up
two masts :-)). I'd guess a good base would be a capped off length of
PVC just bigger than the steel, that I could set down in the ground and
drop the steel pipe into.

The problem is that for a band that is not in demand, the prices for equipment for 220 is incredibly high! Maybe if there was more 220 equipment available at lower prices, there'd be more activity on it. I'd like to see TenTec come out with a transverter for 220. I'd buy it as long as they didn't try slapping a $400 price tag on it.

If you'd like to try 220 (actually....222 now, eh?) look for a Tentec 1210 transverter and get a copy of the transverter conversion article from last year's QST (June? July? August? Don't remember the date, but I've got a copy) and mod it for 1.25 cm. Yup, not too many people on it....but YOU can change that, right? I'm only running FM at present, but trying to get a few more folks on. And....you'll be a hot property during the VHF Contests!!!

Hmmm... that TenTec's dirt cheap (relatively speaking)... sounds like just
the excuse (er, "reason") I need to toss up another mast and a 220 beam :-).

Also, Elecraft (http://www.elecraft.com) has just come out with a line of
three transverters that match their delectible little K2 transceiver - they
cover 6m, 2m , and lo and behold, 222! Price is high compared to the TenTec
units ($350US), but if the K2 is any indication it should be a solid piece
of work.

Topic: 2767 Message: 2767

sorry but currently no one makes a stand alone 6 meter radio base or
other wise
and most of the so called base radios still need s seperate power supply
i would suggest looking into the Icom 706MkIIG or the Icom 746Pro or the
kenwood TS2000 or the yaesu FT100 or FT847 these radios are priced
ranging from $720-1500
you might consider buying used if you want a 6 meter only base rig
something like the kenwood TS600 or the Icom 551 or the Ic575 or the
yaesu FT620 radios
most of these can be had for $200-500 depending on condition
good luck

MFJ-9406 6 Meter SSB Radio W/ MFJ-416 Keyer
I have a MFJ-9406 SSB radio for sale into a dummy load in both SSB and CW and showed 12 watts out put. This with the optional MFJ-416 CW keyer installed. Radio comes with MFJ mic, original box and manual for the 9406 radio. This radio was just tested radio is very clean. $160 shipped in the 48 states. Reason for selling is that I am buying another 6 meter rig . I would consider a partial trade for a Ten-Tec 1208 20 meter to 6 meter transverter. Must be in good working condition and factory built or a MFJ-9440.

A new RCI-5054 6m monoband rig costs $300 new. Not a base, but not a bad radio. As someone else stated, there are currently no 6m base rigs in production. I am not sure when the last time was that someone made one.

From: Bob Brown
Topic: 2771 Message: 2771

Just got a rig with 6M and looking for a recommendation on a light, good performing, 6 meter antenna (yagi or quad?) that I can take mountain topping for this weekends contest. Not opposed to spending a little cash on a decent antenna that meets this criteria. I'd prefer as light as possible.

Thanks!

73 - Bob KW3F

Hi in reference to the 6meter base I got one from a local 2 way radio shop for free. It was a hammerlund FM 60 on low split 35.88 I converted it to 6 meters and got crystals from international crystal for it. Of course its a single channel but with a GLB could be made to cover many frequencies on FM of course. Mine has been working with no failures for over 5 years. The only other way I know of is to buy a mobile anduse a car battery outside with a charger inside to keep it up when not in use. I do thyis for my workbench to service mobile ham rigs Joe wb4igu

Ranger makes a Six Meter only Mobile, it has USB, LSB, CW, FM and AM, runs
25 watts SSB and ten watts on the other modes and price is around 300.00.

Well, I should have my FT-817 in a few days so I'll start putting DN84lc on the map. Don't know what I'm going to do for a antenna just yet was going to just put up a halo, or a dipole. I've had beams up and for me now its just more hassle than I want to deal with. The winds here where I live like to eat beams. I might go ahead and build a simple quad tho. After buying the FT-817 my spending money is just about zip. Why a FT-817 and not something with more power? I've been running nothing but qrp since I got my license in 1967 and I love it. hi hi

irs not bad if you want to use 2 and 440 vertically for FM but that is
all it can do
i have talked to a few who have owned this and they say it works okay
but its a bit flakey to tune

if you wish to do horizontal i would suggest a cubex quad the KingBeeIII
is 4 elements on 6 8 elements on 2 meters and i believe its also 8
elements on 440 all on a single 8 foot long boom
here is there website www,cubex.com
good luck

Larry,
Have you thought about working split? Some of my DX QSO's have been split although it seems most PSK31 ops haven't got the hang of it yet. I use Digipan and you can set one freq marker slightly higher or lower than the other to work split. I don't see any reason you couldn't use both VFO's on a dual VFO rig. You transmit on VFO A on 50.290 and receive him on VFO B on whatever freq is good for him. Someone correct me if I'm wrong here, but isn't the bandplan for the rest of the world for 6 meters different from the US (ARRL) bandplan (kinda like the mess on 40 m)?

Hello and sorry for the long delay as I am on board a ship here, and my timing on and off the computer is very mixed at times. I will mention that the Sasi as soon as he gets back to his home, as he's on a diving expedition I believe. We just involved with the digitpan@yahoogroups and he is one of the members of this group.
I have used split but only on SSB when I was at home in DU1 land and will keep it in mind when it comes time to purchase the equipment. He mentioned the tiger company to me and I will either go for it or rig blaster..

2797. VHF LOgger

Yahoo group: 6meter (2000 — 2003)
Date: 2003-06-12 02:00:18 UTC
From: Jerry Felts
Topic: 2797 Message: 2797

A couple of years ago before my old VHF rig died and I was on 6 and 2m alot there was a deal on the internet. It was a type of logger thats what I guess you would call it. I was doing alot of WSJT and used it almost every day. What it is is a deal where you can announce that NR5A is on 50.129 calling CQ, or you might say something like NR5A could you meet me on 50.140 de BLA BLA 6 BLA BLA. There were different ones for different things like 2m, 6m, Sats, HF. To make a long story short I can't find it now that I'm about to get my VHF back, does anyone know what I'm talking about? Thanks

Jerry - NR5A - DN84lc

From: Jerry Felts
Topic: 2798 Message: 2798

If I get my FT-817 by Friday and I should I'm going camping. I will monitor 6m alot between working hf, however if 6 should open I'll will be there.

I know within a 75 mile radius of where I'm going camping. Yeah most folks know where they are going but all I know is I'm camping somewhere in the Black Hills National Forrest because its free. I'm just trying to figure out how do I find out what grid square I'm in?

I wonder if I take a cell phone is there some number I can call to find out where I'm talking from? Would they know what a grid square is? A cell phone is a transmitter pretty much??

Ok, second idea if I borrow a GPS from a friend would it give me the grid square I'm in?

Just trying to figure how how I'll know exactly where I am, hey I'll know where I'm at but you won't. LOL

2800. Mtn topping antenna

Yahoo group: 6meter (2000 — 2003)
Date: 2003-06-12 05:26:41 UTC
From: Barry_bogart
Topic: 2800 Message: 2800

I just use a dipole made with Radio Shack parts - I call it a RSBuddiPole. RS sells 72" whips, and I just bught two and mounted them on the center piece of another RS rabbit ear set (which comes with 19" whips). The center piece fits in the aluminum tent-pole sections I use as a mast. I either attach this mast to a light camera-tripod center column, or stick it into the ground with a spike. Just pull the whips out to about 56" and you are set. I have used this in high winds with no problem, and there is some directivity and gain, of course. Not as good as a yagi or quad, but very light and compact. I will me using it mountain topping from CN89 and 88 every weekend for the rest of the month.

Subject: [6 Meter Sked] Light 6m Antenna for mountain topping

Just got a rig with 6M and looking for a recommendation on a light, good performing, 6 meter antenna (yagi or quad?) that I can take mountain topping for this weekends contest. Not opposed to spending a little cash on a decent antenna that meets this criteria. I'd prefer as light as possible.

Thanks!

Well, if you wanted to lug a laptop along, I'm pretty sure there are utilities out there that'll convert lat/long to grid squares. Heck, there might even be one that'd run on PalmOS or PocketPC.

I'd glommed onto those 72" whips some time ago, but was stumped about
what to do for a mounting arrangement (mine are temporarily nailed to a
piece of wood with coax staples). Thanks for the description! I'll have
to give that a try.

Another method is to use a chunk of plastic (PVC pipe...the white stuff, not the grey..get a cap, it works great), drill two holes thru it about 1/2" apart and stuff the two whips thru. A piece of RG58U with alligator clips will connect to the ends. Mine is a chunk of nyloc (teflon) which is drilled to accept the head of a flash stand approx 6' tall. Lightweight and easy to transport/set up. About the only decent thing at RatShak anymore!!

The RS rabbit ears I used with the 72" whips is part number 15-235 (at
www.radioshack.ca, anyway). It is a bit of a tight fit and you will have to
file it down a little - and a little more if you want to fold the 72" whips
parallel. Very solid, though, once put together.

2811. Bit of a rant.... and a quest for filtering advice

Yahoo group: 6meter (2000 — 2003)
Date: 2003-06-13 13:36:59 UTC
From: Bruce H. McIntosh
Topic: 2811 Message: 2811

Some days it just don't pay to get outta bed... my QTH is positively LITTERED with QRM, most of it sitting right atop 50.125 with some kind of demon-possessed-washing-machine kind of noise that usually peaks out at about S5, with fringes extending right out to .150 or so. The band's gotta be WIDE open for me to hear ANYONE most of the time, and a couple of days ago it sounded specTACULAR; I heard CW beacons all over, and SSB spread clear out to .225 or so. AWESOME. Of course, by the time I got the kids settled down and in bed, and the stack of "honey-do's" my wife laid on me right then done, it all went away again! Oh the frustration! Oh the humanity! :-(

I'm fairly certain it's not the radio's fault; I had the rig at the beach a couple weekends back and heard none of that crud. I've also had it in the car and not heard the crud (tho I *did* hear lots of ignition noise, but I know how to cope with that :-)).

Anyhoo, I'm wondering if there's some kind of filtering that might help my noise situation, either a bandpass RF arrangment that'll pass say 50-51MHz, or some kind of active audio filter (w or w/o dsp) to chisel out some of the crud from my AF? Any thoughts/advice?

Bruce,
I would try and find the source of the noise. Chances are it would be easier to try and clean it up at the source than to filter it out. It might even be in your house. If not, maybe you could drive around the neighborhood with the rig in your car and see if you can locate it.
My 2 cents,
Kevin N4KM

I got a lowband commercial two way radio filter on mine for tx as well as receive. 20 years or so ago i had teriffic hash on mine ans with an AM radio one night i found the trouble to be bad insulators several houses away on a power pole. I called the Va power company and was assured they would fix it and time went and they didnt. I called back ant talked to the thecinal dept and told them the trouble and that if not fixwed I would contact the fCC. Well within 2 or 3 days they were there and fixed thge trouble. Joe wb4igu

Bruce,

don't forget that some noise comes thru the AC line. I use an APC UPS backup for reducing
that noise and dealing with brownouts/blackouts.

2816. Cubex Quads

Yahoo group: 6meter (2000 — 2003)
Date: 2003-06-14 03:04:27 UTC
From: Jerry Felts
Topic: 2816 Message: 2816

I'm fixin to get back on 6m any day now, like probably tomorrow. I'll start off with a simple dipole. I'll be running a FT-817, yes you think strike 1. Antenna will only be about 18 ft high max probably more like 15ft. Yeppers, strke 2 - oh well.

I'm lookin at the Cubex brand of quads. Anyone use them? What do you think? I really interested in something like the Hornet, which is a 2 el 6m quad with a 4el 2m quad inside it. 2 antenna in the space of one is what I'm looking at here. I've just gotten tired of trying to keep big 6 & 2m beams up, too much of a hassle for me anymore. The winds here in South Dakota where I live give beams a good workout.

Has anyone used these antenna? I'm open to sugguestions!

Jerry - NR5A - DN84ld - South Dakota

Just to throw another solution at you,has anyone tried the line of KMA log periodics? I've run his smaller 6 meter antenna and it plays quite well. It's very rugged,with thick wall elements,has about the same gain as a 3 element yagi or 2 element quad,and it covers the band from end to end with low SWR.Lots of bang for the buck.
Bad weather is tough on quads too.Alittle ice build up and some wind and you've got a broken antenna.

2820. First QSO

Yahoo group: 6meter (2000 — 2003)
Date: 2003-06-15 03:14:50 UTC
From: Steve
Topic: 2820 Message: 2820

JUst got the 706 up and running into a dipole at about 25-28 feet. High noise level here in the area. Made a couple of contacts in the contest on 6 and 144 USB, but had a hard time hearing most. Would I be better off with an omni dirsctional such as a halo at the same height. How directional IS a dipole. Fairly new to 6 meters, have been on 2 meter fm the last couple of years. AL help greatly appreciated.

BTW the antenna is about 6-7 feet above power lines. THey criss cross my yard and there is NO way around that.

Picked up an old weathered Saturn 3 ring at hamfest and was wondering if anyone out there remembers or knows the electrical theory behind the 3 ring design. I see that it allows for a much smaller loop than the normal loop halo design. Searching around the internet I found the real nice copy that is being sold.

Use 2 dipoles mounted at 90 degree away from each other about the same height using a coax switch or make the other a vertical using 55 inches or less of old wiring with 3 ir 4 ground radial 60 or so inches pointes downward even in a tree it works welkl on 6 in addition to the dipole you will be surprised at what you were missing and might just try to find the best direction and give the dipole some gain. joe 4b4igu

Was outside in the back yard tonite testing my newly built BLT tuner and FT-817. Antenna was a 20 inverted vee made out of a 50ft piece of cheap tv twinlead supported by my Black Widow fishin pole. Once I got everything hooked up I always check 6m first, actually I was planning on working 20m cw. 6M was wide open, would the BLT tune the 20m Vee on 6m?? Had to try, hmm neat 1:1 SWR. So I jumped in with both feet working several stations on 6m. Was really surprised that combination would tune up on 6m. Cool I've got to get the old beat up 2 1/2 element 6m beam bac

That was gonna be my question, too. :-)

BTW, has anyone here dealt with Texas Towers (the guys that put all those big purple ads in the back of QST)? I've got a hankering to put a yagi together for 6, and they've got what looks like good pricing and selection on aluminum tubing.

I just put up a temporary 1/4w groundplane for six, it works well.
I'm getting my yagi from www.sandpiperaerials.co.uk , if you live this side of the pond they are quality antennas at low prices. No, I don't work for them, they just impressed me big time!
So far I'm working across to eastern Europe and the Med, but looking forward to those big inversions and ducts to come along so I can hear you guys stateside! Using here the IC706, 100watts. I've got a shack photo to upload, how do I do that?

My name is Keith, KB9WMJ, Grid EN63 (My QRZ info is incorrect)

I'm an amateur in Milwaukee, WI and have been on 6M for a little over a year.

Currently I have an Alinco DX-70TH, and a Shinwa SC-350X (FM Only) on the base. My antennas are a Tri-Band vertical (Including 6M) 60' up on a tower and a Cellwave (Phelps-Dodge) PD-320 hanging off the side of the tower. This is a commercial side mount antenna that can be tuned 6M.

I do field service work, and have lots of windshield time. I have an Alinco DX-70T in the mobile, plus a Alinco DR-M06T. These both feed a KLM 80 watt all-mode linear amplifier, then to an NMO in the center of my roof. I have a few mobile antennas that I use on 6M, primarily a Antenna Specialists 2M 5/8 wave. I also have a full 1/4 wave 6M whip, plus a Motorola Spectra (42 - 50 MHz version).

Locally we have one repeater left, which happens to belong to my club (WERA). It's on 53.03 (-1.0 split) with a PL of 103.5. It's located in grid EN52. There are 4 - 5 club members that use this repeater daily, with a few others that frequent every once in a while. I like having the PL, since every once in a while DX comes in, and I can turn off or change my PL and work a DX repeater. I wish we had a voice ID'r which gave out our repeater PL occasionally, so more people could work it, but....

This spring, 6M DX has been active in Milwaukee. I've worked East Coast, South East and South, just in the last few weeks. I have heard stations from the Caribbean, and Mexico, but have been unable to work them. I recently had my first tri-mode day, in that I had SSB, AM and FM DX contacts all in the same day. I also recently heard my first Aurora DX.

My main sub-hobbies within Amateur Radio are 6M, 220, 440, antenna building and Echolink. I have the only local Echolink repeater node in Milwaukee. I'm currently working on getting a Midland commercial rig on 6M, plus building a new repeater for my Echolink node.

Keith,

if the ID is only CW, just have a TAIL msg added with "PL 1A"
or have that added at the end of the ID when the rptr IS in PL mode
The DFW 53.35 rptr WA5YST does that..if PL is on (and its 127.3 btw)
the rptr will send "PL" at the end of the ID AND every 4 hang times..
if its COS, NO PL msg is sent..the controller is an OLD MRC-100 SCOM
with no voice. Also, the Ming DVR is a good cheap Voice ID..as is
the ISD voice chips that RS used to sell (still?? not sure)...

BTW I have worked the Milwaukee rptr a couple of times from Texas..
I run a Midland Syntech II (320 channel capable) 100watt FM only
in the Blazer...being a Broadcast/telecom engineer, I too have lots
of travel time...(some of my sites are almost 2 hours away)..

If you need any help with the Midland, let me know..I can program
Syntech Is, IIs, XTRs series....I have converted all three to 6FM
from low band (C range of course).....and have also done a GE Delta
that, after stagger tuning like mad, got the rcvr to cover 48-54 MHz
with 0.7uv sens!..not bad for a radio that was rated to cover only
3 MHz max.

It looked like it might have been a good contest, unfortunately, they
picked the weekends of the VHF contest and Field Day to do it.

As for Field Day, I will be running our local clubs VHF station, look for
us as W2ZQ

Well, getting things changed in the club is like pulling teeth.....

We actually have a remote base for 6M to use on our 440 repeater, just waiting for?

Thanks for the Info on the Midlands. I have a Syntech I (70-050C) that I sent the chip off to someone who said he could program it for me, but it's been almost a year now, with almost weekly bugging. He now says it's done, and I will receive it soon, so I hope to get it on the air. I have the service manual for it, so I'm hoping I'll be able to align it for 6M.

I picked up a Shinwa SC-350X a couple years ago, which is a single unit 50W low band commercial rig. I figured out how to make it work on 6M, and had it in the mobile, until I found a real cheap Alinco DR-M06T to replace it. Only thing I never got working on it was the scanning. I now leave it up on the repeater at home to monitor.

6M is open right now. (20:50 UTC, 50.125) I just worked 2 new grids out east......

Space Weather News for June 23, 2003
http://spaceweather.com

Prospects look good on June 23rd for the launch of four rockets from Wallops Island, Virginia. Harmless chemicals released by three of the rockets will create some lovely high-altitude clouds visible from parts of the US east coast. Sky watchers near coastal Virginia, North Carolina, Maryland, New Jersey, Washington DC, and possibly parts of lower New York and Pennsylvania are favored. The launch window extends from 9:30 p.m. to 2:24 a.m. EDT.

Visit Spaceweather.com for more information. If you happen to see the clouds tonight and take pictures of them, please submit your images to spaceweather.com for possible web publication.

From: Barry_bogart
Topic: 2860 Message: 2860

There are quite a few around - some free and some not. I personally use a Smartlist app since I can customize it myself. You can find it and Smartlist at Dataviz (The Docs to Go people). There is a web site somewhere of Palm apps for hams, too - email me if you can't Google it. And search Palmgear for Radio apps.

Let's keep 'guest' off of here, OK?

We all 'love' amateur radio and we all make 'new friends' via QSOs. Some might even discover some 'singles' here. But amateur radio has NEVER been limited to adults.

Thank you.

From: Jerry Felts
Topic: 2872 Message: 2872

Question - Anyone out there using a FT-817 and Rascal interface for PSK? Reason I'm asking I'm getting my set up and the FT-817 does the recieve on its built in speaker, but when I transmit the FT-817 mutes and I hear the transmission thru the computer speakers! Is this right? Seems like it should all come out of the computer speakers or else the rig. What does yours do?

Jerry - NR5A - South Dakota

2880. Re:PAR loops

Yahoo group: 6meter (2000 — 2003)
Date: 2003-06-29 12:07:13 UTC
From: Tom Cox
Topic: 2880 Message: 2880

John,

I have a pair of PAR 6M loops with the PAR harness at 100 feet and 86 feet; just got them connected this week. I have been able to hit ground wave stations all over during FD ops, from E. Central IN (EN70gd) -- any station I can hear. I'm working northern and southern IN, IL, OH and MI, all with 100 W. or less from an IC746. Looking forward to the next opening that happens when I'm home, instead of sitting at my desk in the office (!!). They are well built, easy to assemble, and I got good responses to my questions from Dale Parfitt. Very reasonable price. I wish I had a pair of 2M loops up there, too, so I could talk somewhere besides due north while my rotor is down! That's on my wish list.

I have no business relationship with PAR, other than as a satisfied customer, and I'm not afraid to rag on vendors who sell junk. The PAR loops are good stuff. I will be putting a positive review on eHAM in the next few days, when the FD dust clears.

73,
Tom, KT9OM

well george
i think your looking for gold in a self of mind
a good 2 meter all mode will cost you about $500 and so will the 432 radio and the 222 if you could find one will cost probably twice that much due to its rarity
your best bet with these radios are to go with transverters downeast microwave sells transverters for each of those bands and work very well
the chances of you finding any of those radios on either of these lists are slim
you would be better off checking out www.qth.com they have a free ham classifieds section
good luck

2883. Re: [6 Meter Sked] 2 meters,222, 432 all mode radios

Dennis is right. About a year ago I sold a Kenwood TS-711a 2m All-Mode at a local hamfest and it brought $450. The rig was built back in 1985 but still worked good. VHF/UHF all-mode rigs hold their value.

good luck and good DXing,
Jamie R. Dean - W4JRD

From: Keith Beckmann
Topic: 2884 Message: 2884

On SSB monitor 50.125 USB. When .125 is active, then listen between 50.100 and 50.300. most activity is on like .125, .130, .135 and such, although sometimes there are people halfway between this.

There will be AM activity on 50.400.

When the band opens, you should hear stations on 52.525 and 52.54 FM. Plus there are many repeaters on 52.91 to 53.97 (every .02). The problem is the splits may be 0.6, 1.0, 1.6 or 1.7 MHz, and there may be a PL. There are some states where they run a completely different band plan, like California. Usually a repeater book comes in handy when you hear a repeater to help figure out the splits and PL.

I've noticed the MUF often reaches the SSB portion of the band, and never gets high enough for 52.525. Also SSB contact is easier than FM, so when the band is just barely open, you can make an SSB and hear nothing on FM.

It also doesn't hurt to put out your call on 50.125, every once in a while. Just say "CQ 6 meters, CQ 6 Meters VE5KC", and listen. Make sure you know your grid square (yours is DO52, that's an Oh not a zero), and can say everything phonetically (I.E. Your call sign, grid square, name).

There is almost no activity on 6M in the winter, so no big surprise you haven't heard much. The last few weeks 6M has been open for me in Wisconsin. I've got 30+ confirmed contacts, and a few QSL cards already.

I'd like to work Western Canada, as I have no DO's or CO's.

Oh, and there are beacons (automated stations sending CW) on 50 to 50.1, so when you hear CW here the band is open.

Anything happening on 6m?? Anyone working western Canada? Haven't
heard a thing.. Actually I've hever heard anything in the 6 months +
that I've had a rig with 6m...

Where the best place to listen??

50.110 +/- 3 is reserved for the DX window so please dont xmit there if
the
band seems to be open...listen for the DX and call them!

> There will be AM activity on 50.400.

Thats the AM calling and working freq (most AM guys back in the 60s and
70s were rockbound...most refurbed gear today there will still be! :)

> When the band opens, you should hear stations on 52.525 and 52.54 FM. Plus there are many repeaters on 52.91 to 53.97 (every .02). Usually a repeater book comes in handy when you hear a repeater to help figure out the splits and PL.

I dont know of anyone using 1.6 MHz splits (though I was a big advocate
of them until I gave in and started to support the 1.7 split...I think
wiping the slate clean and going with 1.6 Mhz would have been the
best!) AND CA & few others still running the 0.5 (NOT 0.6!) split are
on even channels (like the band used to be back in the pre -1MHz ARRL
plan days)...while MOST everyone else on the 1 or 1.7 MHz splits are
on ODD channels. (BTW 52.54 is not a recognized simplex channel...since
it is 15 kHz away from 52.525, it does not qualify in ANY band plan)

Its time to move 525 to either 52.52 or 52.53! And if you want to know
WHY 525 is in existance, read my article on the 6mt.com web site about
changing the 6mtr band plan. The 1.7MHz split is being coordinated in
MACC areas and the NW US...as well as some others...the -1MHz split is
still the dominant one in the rest of the US.

> I've noticed the MUF often reaches the SSB portion of the band, and never gets high enough for 52.525. Also SSB contact is easier than FM, so when the band is just barely open, you can make an SSB and hear nothing on FM.

VERY true!

I worked some folks during the winter here...but luckily Texas is big
enough for band openings all the time :)

> I'd like to work Western Canada, as I have no DO's or CO's.
>
> Oh, and there are beacons (automated stations sending CW) on 50 to 50.1, so when you hear CW here the band is open.

US auto beacons are from 50.06 to 50.08....anything outside that range
MUST be a manually controlled beacon in the US (with someone REQUIRED
to monitor it while its on) or outside the US...one beacon I have heard
sometimes here is the 50.048 bcn in NE Canada at times....CW ops
usually hang around 50.099 or so (JUST below the phone band which
starts at 50.1...and nothing but CW is allowed below 50.1 in the US)

Worked DO33 (VA6SZ) Alberta Canada on 6/25 on 50.140 from EM15. My first and so far only out of USA contact. Band has opened at least a little each day so far. I'd really like some W coast openings. Not much heard from there.

I guess when I worked all of the UK and several European countries in January 2002 (at 25 watts and a 3 element yagi at 20 feet), it was all in my imagination, huh? ;)

ARRL does not know anything about repeater coordination/bandplans..
just ask them!! :) All they do is recommend...but their printed
plan on 6 is used by only 3 or maybe 4 states! The rest of country
is NOT using that plan...and HQ will always tell you "We don't want
to be involved in coordination" which then WHY I have to ask, do they
publish suggested bandplans NOONE else uses? (The 1st 10mtr bandplan
was 15 kHz spaced.....instead of 9.60, .62 , .64, etc they were saying
use .60 simplex and then .615, .630, .645, etc...YEAH way to go ARRL
HQ...noone ever figured out where THAT came from!) How they can
offer 52.54 as a second simplex channel is totally idiotic...
considering its only 15 kHz from 52.525 (which is where the problem
lies...after wideband FM went away, you WOULD think 52.525 would have
moved DOWN to 52.520! oh well, old habits die hard...or not at all)

and 6 is the ONLY band without a NATIONALLY accepted split..
10 is -100kHz, 2 is + or - 600 kHz, 220 is -1.6 MHz, 440? +/- 5 MHz
and 900? well that band is being abandoned in many areas because
of AVM and other junk polluting it..it was never an active HAM
band in a lot of areas anyway...1.2 GHz?? Well ICOM made the split
with their 20 MHz offset...yet ARRL plans STILL say use a 12 MHz
split...and if you look, the majority of rptrs on 1.2 GHz is 20MHz
offset....so much for the ARRL bandplanning...(it is a joke).

Texas and most other states used to have +600 kHz splits before
5 kHz FM was allowed BELOW 52.500 (that was back in the 60 and 70s..)
The 1st 6mtr rptr I was involved with was in Beaumont, TX WR5AJW
on 53.12 in/52.525 out (close to 600 anyway!)..it was later moved
off 525 when the new 1MHz splits came along in 1980.
If you read my article at the 6mt.com web site, you will find the
history of 6FM.....and how the current plans came into being..

A lot of times, it seemed 6mtr rptr IOs back until the 80s were picked
by whatever the owner had in his xtal bin and would work in the
TX and RX :) A lot of them (including the rptr you mention) were
not in alignment with any band plan! and we wonder why 6 has been
stifled in rptr operation compared to the other bands (DUH!)

I still say 1.6 MHz splits with EVEN channels like 220 was the way
to go nationwide..that way EVERYone had to make a change in one way
or another..there was NO bias...

And my 1st 6m solid state rig was a Genave GTX600...bought it in 77 or
78 and it had the Evansville IN rptr in it...which was on a weird
split (I still have that radio and xtals...stored away right now..
I dont think that rptr is still in operation though)

My approach was to pick up a used Yaesu FT-100, with which I am happy as the proverbial clam. It doesn't do 220, but a transverter'll take care of that. Plus, I get the added bonus of HF, all in a package I can stuff into a backpack with a (big heavy :-)) battery. The shop where I purchased it last week (AES in Orlando) wanted $500 for it; they had a TS-711 on the shelf for $550, which is comparable in price to what I've seen other used VHF allmodes going for.

Same here. Between the horrible weather (thunderstorms up one side and down the other) and one MONSTER loud broadband noise just north and west of my FD QTH that blanketed 50.000 - 50.145 in grating hash, about all I heard all weekend was a couple of other central Florida sites. Ah well, at least my makeshift quad and mast combo didn't blow down in the gale. :-) Oh, and the FT-100 is a nice little radio, even if the DSP noise reduction couldn't do much with my QRM problem.

Icom and Yaesu have really been in a duel in the "small HF/VHF gizmo" market. Read thru the reviews on eham.net, noting the relative dates. The IC-706 came out, and everyone loved it. So cool! HF,50,2m and 70cm in a novel-sized box! Then Yaesu put out the FT-100, and everyone raved (and promptly abandoned their 706s :-)). Icom upped the ante with the 706MkII. Yaesu came back at 'em with the FT-100D. Each one was better than either firm's previous units, but the older units are STILL marvelous radios. Can't go too far wrong (subject to some caveats - read the reviews) with any iteration of either line. Also, if either you're not into 144 and up or you are into transverters, the Alinco DX-70T gets high marks, as does the Kenwood TS-50 (that last doesn't have 50, so you'd need a transverter there, while the Alinco does have 50). I'd have gone with just about any of 'em; it's just that I happened on the FT-100 when my wife was feeling tractable. :-)

A question for all that operated 6 meters at a field day site. How did you do? I was at the 6 meter station for LEARA (Lake Erie Amateur Radio Assn) We had a GREAT site, on the southern shore of Lake Erie in CLeveland Ohio EN91. In teh first six hors, only 10 contact, and only on out of NE Ohio and that was to Detroit Michigan across the lake. Station was a rotatable dipole at 30 feet and a 746 with 50 watts, and the switching to a 706Mk llG at 100. Hope you all had a great experience...

We were approx 500 ASL and had a PAR Omni up 100 feet on a tower. Radio was an Icom 560 - 10 watts out. 26 Q's in 11 grids. We were located in Southern PA (FN10) and had contacts in DE, NJ, PA, MD, NY, CT.

All contacts were Saturday - Sunday same stations calling as Saturday and no calls answered. This was almost as good as the number of Qs on 15 meters where we only had 27 at the end.

2913. 6m Out West

Yahoo group: 6meter (2000 — 2003)
Date: 2003-07-01 05:37:20 UTC
From: Barry_bogart
Topic: 2913 Message: 2913

For FD I continued my June-weekend-6m-QRP-mountaintopping. This time I cycled down from Vancouver to Orcas Island, WA and then up about 2500' on Mt. Constitution. I was using a Mizuho MX-6Z HT with the lil' linear. That's 250mw out from the HT and 5w with the 'brick'. I was using a 'Radio Shack Buddipole' dipole. I worked about 40 contacts SSB, but all in BC or WA. After six hours no one new came along. I was in class 1BWWb with a solar recharger which was more than enough (the Mizuho draws less than 50mA on receive - it runs on a 9v
battery!) I was using the full 5w most of the time, but did turn off the linear to work VE7CVA and one of the W7s on 250mw. For the VHF QSO contest two weeks ago I also used the MFJ-9406 (10w) on top of nearby Mt. Hollyburn at 3000' and did pretty well. Altitude works!

Not too hot. Only logged about a half dozen, all local to where I was (Largo, FL). Weather was appalling- thunderstorms all afternoon/evening Saturday. Had to take down early Sunday to go to my nephew's birthday party.

Ran a battery-powered Yaesu FT-100 into a collapsable homemade 2el quad 16' up a portable mast maybe 20-30' ASL. You work with what you got. :-)

2917. antenna design

Yahoo group: 6meter (2000 — 2003)
Date: 2003-07-02 02:48:06 UTC
From: Steve
Topic: 2917 Message: 2917

If you were going to design an antenna for 6 meter, 2 meter and 70cm, what would you use as the optimum frequency setting for each. What would be your choice for center frequency. Id like to design a quad that covers all three bands for a location that is limited in space.....

73's de KB8UTA

2918. Re: [6 Meter Sked] 6 meter gods

Yahoo group: 6meter (2000 — 2003)
Date: 2003-07-02 03:11:57 UTC
From: James Carlin
Topic: 2909 Message: 2918

The FD site I was at sported a yaesu FT-897 with a 12v battery and a solar panel for 100 watt operation. The antenna was a shorty G5RV that tuned up nicely on 6.

Anyway we made only one 6m contact, and that was to another local radio club only 20 - 30 miles away. 20 meters worked much better :)

We can claim one cool thing though, our location. We set up in a county park yards from the main entrance to US Southern Command Headquarters in Miami FL. We even had 2 visitors, Department of Defense Police. They were OK with our radio setup, so long as we did not take any photos or video of the command building.

You should come see our new repeater site, an old microwave site, pretty nice. We're looking at putting up some permanent antennas for operating and I'd love to put a 6m beam on top of the tower. The beam is the easy part, the rotor is harder (i.e. $$$).

Thats fine if you have 299 + shipping laying around.
I also have the same intentions as I am going to be putting up a tower
before too long.
I will make mine to where I can flip a switch and operate horizontally
polorized or vertically depending on the mode in use.
There are several designs floating around. I also have access to a book on
quads that I'll be using as reference.

73,
Jon

Depends on what your usage is. Are you going to use SSB only, FM only or both? What kind of polarization?

If you plan on using for both, there is a little problem with bandwidth on 6M. You can set the SWR for the lowest point on 52.0 MHz, which is the center of the band, but depending on your design, you may have unacceptable SWR's at each end of the band. If this is the case, you might want to lengthen the antenna, so it's resonant on the lower part (say 51.5) of the band, since this will give you better results on the SSB frequencies, and still allow FM usage.

As for 2M, it's usually not a problem getting full bandwidth, just pick 146 MHz as your center frequency, assuming you want to be able to use the full band.

I haven't played with Quads at 440, so I can say what the bandwidth will be. Best I can say is to make a wood framed driven element model and try it out.

How many elements were you planning on using, and how were you planning on spacing them for each frequency?

See if you have a buddy with an MFJ-269's SWR Analyzer. It's really nice for playing with antennas.

If you were going to design an antenna for 6 meter, 2 meter and 70cm,
what would you use as the optimum frequency setting for each. What
would be your choice for center frequency. Id like to design a quad
that covers all three bands for a location that is limited in
space.....

From: divenut1@sprynet.com
Topic: 2919 Message: 2925

I was going to concentrate on the lower portion of 6m but allow for some fm operations too. I would probably center it somewhere between 51.5 and 52.0 so that I have the best of both worlds. 2m was going to be center on 146. The 70cm part was going to probably be more oriented towards the bottom end of the band but I'm not sure yet. I need to do some more thinking and research on it. That is not as important to me yet as I don't have a 70cm allmode rig yet but I do have 70cm fm.

I do have a mfj 259 and a 219 so I am covered from hf - 2m and 70cm.

It was VERY open here in FN20 (my work QTH). I have a Bearcat scanner in my car at work with a Radio Shack magmount scanner antenna. I have 52.525 programmed in the last channel (I ran out of things to program!) and today I monitored a QSO between WB9WDH in Indiana and K4OT in Florida on 52.525 FM, hearing both sides with a little QSB!

At first, I didn't realize what it was because I wasn't looking at the scanner. When I noticed it sounded like a QSO, I looked down and was really suprised. I wish I had been home to take advantage of the opening!

Haven't heard a thing in Western Canada DO52..

Nothing new though.. at least it's consistent. :-(

The Rig is an IC-746... and yes the antenna is connected, I double checked that.. :-) The hi-gain preamp is on. The transmitter loads up into the antenna with the auto tuner..

The only use I found for 6m so far was to run my EchoLink remote base. I worked some stations on EchoLink using my VX5-R HT, so I know the rig is working.

I'll keep trying for a bit more but hard to keep interest this way.. hi..

hi..

73 . . Ken - VE5KC >>

Ken...worked several BC stations a few weeks ago...when the band opens to the east, you will be a HOT contact! Had a major pileup on 50.145 for one guy in Delta, BC and around 50.135 for a few guys in Seattle. I worked half a dozen west coast grids in around 30 minutes that weekend (mid-June....don't have the log with me).

Keep the faith, bro. Remember the mantra....."the band WILL open.....the band WILL open.....the band WILL open.....the band WILL open.....the band WILL open....."

((grin)) Now....for Alaska and Hawaii!! (yea, right!)

Dave -
I only wish - All I could do was listen last night - depressingly no one heard me. But I only have a Par Omni 50 at 18 feet with 10 watts out, so I'm not even a very small pistol!! Actually, except for one Delaware station, most of the contacts seemed to be north of me. A station in Reading (forgot call) seemed to be the closest. I guess I need to look for a beam at the hamfest tomorrow.

BTW - 6 is open again - I hear K0CIY in EM17 loud and clear

Gregg,
You would be surprised how far 10 watts will go. I
am useing an old Kenwood TS-600 that puts out about 8
to 10 watts max and a Lunar 100w amp with a 60's
Hilltopper 3 element beam . This is a real light
weight portable antenna.It is about 30' off the
ground. Now granted useing the amp has helped, but
some times I don't use it just to see what this old
radio will do. I have reached as far as Nova Scotia
and California on 8 watts from Augusta, GA earning a
59 report. This just tickles me to death! One of the
old timers in our local club has made the comment that
"When 6 is open 10 watts is plenty, when it is not
10kw is not enough." Seems right to me!
Have fun and 73's

Thanks. I got him.
My station is a little bigger, but nothing special. I have an RCI-5054 running about 100 watts. My antenna is a 5/8 wave center fed at about 25 feet. I've heard very good things about the Par Omni 50.
What hamfest is tomorrow?

Dave

2951. Re: [6 Meter Sked] Re: 6 METER OPENING NOW

Yahoo group: 6meter (2000 — 2003)
Date: 2003-07-04 02:46:21 UTC
From: WB4IGU@aol.com
Topic: 2928 Message: 2951

I got a dipo 6 35 years old up 38 feet with 30 watts out of a hamerlund FM50 A and it works skip from virginia for years i was up 330 feet on the ground now am up 750 feet and skip is the same but my ground wave seems to be almost 25 percent more. Also a beam needs a rotor to hear all use a vertical to find em first. Joe wb4igu

From: Gregg Martell
Topic: 2928 Message: 2952

I think my biggest problem is that I'm competing with stronger signals and
I'm just background noise. I know I can get out because I've hit the
Florida Keys with the same setup, I'm just not heard. Frustrating.

The Par is a nice antenna - simple to setup and tune. Night and day
between the dipole I had at the same height. Used it

The hamfest is being held by the Harrisburg ARC in Bressler, PA. It
supposed to be a pretty nice fest and if you stay in the area long enough
you see the Harrisburg fireworks. I've lived in the area for the past 4
years, but I've always had to work on July 4th. This will be my 1st year
and looking forward to it.

Here's a link for info: http://hrac.tripod.com/July4.htm

Topic: 2928 Message: 2953

Yeah, I hit the Florida Keys w/ 10 watts in the June contest, so I know I
can do it. Just not enough when the band is open to catch the ear of the
stations I'm calling.

From: Keith Beckmann
Topic: 2928 Message: 2956

Naw, just keep trying.

I've got 20+ states from the mobile in the last 2 months, and I'm just running a 1/4 wave antenna.

There are 2 ways to do this:

1. Look for a strong signal, and respond to it, and compete with everyone else.
2. Go on an open frequency (I.E. 50.130) and just start calling CQ.

When 6M is open, I think you could radiate a wet noodle and work DX. I'm in Wisconsin, and talked to a guy in New Jersey today, who was using 10 Watts and a mag mount stuck on his BBQ. I kinda said yah, right until a buddy with a base nearby confirmed that he doesn't have a place to put up an antenna.

Oh, BTW the band is really open this morning.....

2957. power on 6 meters

Yahoo group: 6meter (2000 — 2003)
Date: 2003-07-04 16:17:58 UTC
From: gudguyham@aol.com
Topic: 2957 Message: 2957

Hi Gentlemen, yeah, you can work alot of stuff on 6 meters with low power, but when the band opens for a short time to some exotic place, you will see how fast the hive gets active and the ones with the power get there first. Its a pecking order at that point, or as commonly called "a slug fest". My 1200 watt converted SB-220's can help even the playing field. Or how about my Ameritron conversions with 8877? How much power are they? Tested 2300 watts into dummy load, thumb your nose to the 3006 guys!! Frosty will be using one of my converted SB-220's for his 7P8 dx pedition later on this month. How nice, 7P8 on 6 meters, give a listen for him when he is there. Have a nice 4th.....73 happy 6 meter DX Louie W1QJ
King Conversions

PS e-mail me for digital of the converted SB-220

Yes there are times more is better.If you have 1k or
2k of available power you can burn your own opening.If
you are a contester or the like these will be a must
have for the shack. Sometimes I wish I had one of
those big boys.

Have you ever gone fishing for big fish with light
tackle? It is kind of the same thing.It just seems to
be more fun to see what you can do with low power. At
least to me anyhow.

Do you have a web site for your amps?

All these folks are right, with low power you can't plow thru a pileup. I usually put out calls even when the band doesn't sound open (no stations talking) and I've been rewarded with some really nice QSO's. Also when .125 is busy, try .130 .135 .140 etc. Like Keith said, "just start calling CQ".

I've done it using a MFJ tuner, but don't know how well it "really" works.
I've worked some South American stations with it.

I agree 110%! I'm also in NJ (FN20) and worked 3 new states and 7 new grids this morning (7/4/03). All I used was a FT-817 and a W3FF Buddipole setup in my dinning room. Only a few times did I need to use the THP HL-50B amp with puts out a whopping 10-60 watts. :)
When 6 is open it IS open.

I disagree to a point. Had a contact in Ill. from NJ today and was running 10 watts with FT-817 and indoor antenna and was 59+. If 6 is open, it's open. Here is why I said to a point. A VE or VY was 20+ into here in FN20 and I tried for 20 minutes with no luck.
Whould I have got them with 500/1KW? Sure! QRP? No! Next time? Yes/No/Maybe. That's the fun part.
73,
Mark / W2KRP

From: Dennis Kaylor
Topic: 2928 Message: 2965

you know there isnt anything wrong with QRP if you guys would have high gain antennas
granted when the band is wide open you dont need it but more times than not its really ify with lots of QSB and signals hopping from one place to another a simple dipole or an indoor antenna just is no subsitute for an outside antenna at 30+ feet with atleast 4 elements
i recently switched from a 4 ele quad to a 6 ele yagi and its amazing the diffence in what i hear

Ron, that is what I started with on 6m, I have worked ZF2BI, VO2's, TI2's last year and the year before last. I use a 5el beam now, but when I am protable I use a 40m dipole with fair results. worked a FG5FR 2 days ago on it.

Hello all.

Years ago I used a second hand TV rotor to turn a 4 element 10 meter beam. Worked fine until I took it down, after about 3.5 years of service.

Considering a 5 or 6 element beam for 6 would weigh about the same, I'm looking to do the same thing.

Is anyone doing the same. Do you have any recommendations about brand/model etc?

Thanks, 73,

Gert - K5WW

why buy a plain fm radio when you can buy a 6 meter all mode radio for
300.00 ....or buy a 706 for 400.00 ...if all you want to do is run fm I guess
it is ok but what a waste of money....

This is just my thought...

I have use one of the R/S rotos for about 10 yrs. turned everything from a 5 elm. quad for 2mtrs. to a 3elm for 6mtrs never a glitch. Less then half the cost of one of the big ones. I had it packed away for about 2 yrs. moved into an apartment. I used it this last field day worked just as planed.

The first radio is a Azden AZ-61, 6M HT. It does FM only and is user programmable. This is a 5 Watt unit that sells for $350 new:

http://www.michiganradio.com/azden.htm

I had one of these once, and bought it used for $50 at a hamfest. It's a nice HT, but not real practical where I'm located as I only have one 6M repeater locally, and the HT was always too weak to reach it.

The Midland is a commercial rig, that will do 6M FM. It is NOT user programmable, which means that every time you want to reprogram it, you'll have to send it off someplace to be reprogrammed. This is an 80 channel, 100 Watt mobile. I also have one of these, and bought it used at a swapfest, with the service manual for $25. I'm currently waiting for the chip to come back, as I needed some changes. Problem is it's been a year since I sent it in, with almost constant bugging to get it done.

Look for an Alinco DR-M06T (10 watt), or Alinco DR-M06TH (20 watt) if you're looking for a nice mobile 6M FM rig.

I assume you have a local 6M repeater you want to talk on?

6M SSB has been hot the last month or so. DX does come up to the FM portion of the band, but not as easily as it does to the SSB portion.

The actual antenna weight is only one factor needed to properly select a rotator. You also must factor in the wind loading (should be provided by the manufacturer in their specs), which can vary a lot by design, number of elements, element placement, element length AND diameter. etc.

Be sure that the wind loading spec is sated for a wind speed that is near the top end of what you can expect in YOUR area, in YOUR location, and on YOUR installation.

An antenna at 100' is subject to higher wind speeds than one at 33' that partially shielded by tree tops.

Don,
Can't tell you personally about the Midland, never had one. I know a local Sheriff's Office that was on low band had a bunch of them and I guessed they liked them well enough.

Now I've got the Azden 6 meter HT rig and I love it. Mine was used and has a little problem sometimes with the high/low power switch hanging, but nothing major. You won't get a lot of range with the rubber duck antenna, but I can work our 6 meter repeater with the duck from around town. Add a simple J-pole or vertical dipole and the 5 watts does a pretty good job. Hecked, worked Florida on 52.525 a couple of years ago during a band opening with it!

73,
David K5DEL

I am currently using an ancient Channel Master tv
rotator that I picked up from a tailgater at our club
picnic.It cost all of $25 w/control box and everything
works. Put it on a pole approx 30' up with a 3 ele
beam and it works great. I have seen tv rotators at
Lowes and Radio Shack for well under $100.
Good luck!

one year for the VHF sweeps the club i was with used a Kmart Orbit 360 TV rotor and used it to turn 2 15 ele yagis for 2 meters 2 18 ele yagis for 432 and a pair of looped yagis for 1.2gig and the rotor turned them with no complaints all weekend

but i think if i was wanting to turn something like a 5 ele 6 meter beam i would look for an Alliance HD73 you can find them used in good condition for around $125 and they will turn anyhting you want with in reason i am currently turning a 6 ele 20 boom yagi for 6 and a 13b2 for 2 meters
good luck

hey if your willing to spend $200 you should look into a used yaesu VX5R
its a HT that covers 6/2/440 FM its a dandy little radio the recieve on
it covers almost DC to Daylight
it would be a alot more useful that strickly 6 meter ht

i already bought a htx-240 last week at radio shack. they was on clearence
sale at $150.00 they was 2/440 in the garage i have 2 25 watt uhf midland radios
that crystal tune from like 412 to 512. i used them for gmrs. now i have to
find some simplex frequincies for crystals. what is fm only on 6 meter? what
there is cw, data, am etc? don

I can't say we don't like fm, ssb just seems to work
better. I would love to make some fm contacts but I
can never find anybody playing there.Same with am. I
have tried numerous times to get the guy who goes to
50.400 around the top of the hour. Never can hear him.
Maybe one day!
Good luck!

6 meter FM DX is a lot less frequent than SSB DX. With that in mind, this last week I worked 2 FM stations on 52.525, KD7JGJ Arizona and K9APR Indiana (from Oklahoma City). A buddy of mine worked MN with his 5 watt Icom handheld (on a base antenna). I monitor 52.525 all the time I'm in the shack and these contacts were just as much fun as the 30 or so SSB contacts I made last week. 6 meters is either the magic band (when it's open) or the tragic band (when it's not) and I guess a person could get pretty lonesome if all they had is FM. Of course you might have a lot of locals on 6m FM but that's not the case in OKC.

Hello all. I'm doing a little experiment tonight and into tommorow morning. I've got my FT-100D set to 50.620 and I'm running a 1200 baud packet beacon at 50 watts with an MFJ "double zep" vertically polarized at 20 feet. Give the frequency a listen and see if you hear it. I'll check the log tommorow. I'm setting the beacon to transmit once per minute. =-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=- 73! de Andy KC2SSB (ex: KF4KHC/HL9HCT) Beachwood, NJ USA! Difficult to say.

I have both Horizontal and Vertical 6M antennas, and have worked DX on both.
My 6M vertical is much higher than my 6M horizontal, but sometimes the
station I'm trying to work comes in better on Horizontal than Vertical.
Other times Vertical is better.

3004. Re: [6 Meter Sked] i have a question

Yahoo group: 6meter (2000 — 2003)
Date: 2003-07-06 14:01:09 UTC
From: Dale Keener
Topic: 2977 Message: 3004

According to an article in CQ-VHF written by Gordon
West for the best results VHF FM should be vertical
and SSB should be horizontal polarized. But from what
I have read,this is only good until the signal
"skips". Then it doesn't really matter.
I might be wrong, and I frequently am (just ask my
ex-wife)but this is my understanding on the subject. I
am sure that someone will correct me if I am.

3007. Re: [6 Meter Sked] i have a question

Yahoo group: 6meter (2000 — 2003)
Date: 2003-07-06 14:05:04 UTC
From: Dale Keener
Topic: 2977 Message: 3007

Thanks for the input Keith. I have tried quite a few
times and hear nothing there.Just like anything else I
would imagine , got to be there at the right time!
Thanks again,
Dale

Do you Yahoo!?
SBC Yahoo! DSL - Now only $29.95 per month!
http://sbc.yahoo.com

3008. Re: [6 Meter Sked] i have a question

Yahoo group: 6meter (2000 — 2003)
Date: 2003-07-06 14:27:03 UTC
From: Keith Beckmann
Topic: 2977 Message: 3008

I usually spend my time on 6M SSB, and when the band is really open, I tend to just make really good SSB contacts and forget about AM, until it starts dying down, and I start scanning.

It's hard to remember to check AM when SSB is really hot.....

hey ron
not to sound nasty or anything and god knows i understand about limited
funds
but you ever think of changing hobbies this one costs to much
the cheapest i have ever seen a 6 meter amp was about $200 for a mirage
150 watter
check www.qth.com they had several in their classifieds

Well I guess that's why it's called "HAM" radio. [Has'nt Any Money] years back I ran across a bunch of 110 watt micor amps that had been put in a box with a t/r sw at a ham fest. they were ugly but cheep. arond 50 bucks for 110 watts.

may be I should look for a converted micor to put in the back of the car.

http://cgi.ebay.com/ws/eBayISAPI.dll?
ViewItem&item=3033498806&category=4674&rd=1 the radio in the url
looks the same as the 2 i have in my garage at 25 watt uhf. i used
these radios as gmrs radios. they are 8 channel radios. i'm going to
buy some simplex crystals for the 70 cm band. maybe one repeater pair
but it would be too hard to get a repeater offset for crystals. i
sure hope i don't win that radio in the url. i'm new to ham radio and
ebay so my first mistake. don

There are a bunch of Midlands that all look the same, the model number is what's important. The eBay auction you are bidding on, has still not reached it's reserve, so you won't have to buy it.

Difficult to say.

I have both Horizontal and Vertical 6M antennas, and have worked DX on both.
My 6M vertical is much higher than my 6M horizontal, but sometimes the
station I'm trying to work comes in better on Horizontal than Vertical.
Other times Vertical is better.

If the radios you have in your garage need xtals, then they are NOT the same as the one on Ebay...the EBay radio is a Midland Syntech I...programmable via software and special interface or
the 70-1000A table top programmer (rare birds to find)...
The Syntech series are not xtalled....and they are more than 8 channels (except for the one model which I cannot recall right now...WHAT IS the model number of the ones you have??
70-xxx
is the style it is in)
The one on EBay is a lowband high range model which can by used on 6mtrs....the UHF models can be moved to the 440 ham band as well with the right programming and tuning.

ViewItem&item=3033498806&category=4674&rd=1 the radio in the url
looks the same as the 2 i have in my garage at 25 watt uhf. i used
these radios as gmrs radios. they are 8 channel radios. i'm going to
buy some simplex crystals for the 70 cm band. maybe one repeater pair
but it would be too hard to get a repeater offset for crystals.

3028. First contact

Yahoo group: 6meter (2000 — 2003)
Date: 2003-07-07 06:37:39 UTC
From: Jeff
Topic: 3028 Message: 3028

Hey folks:
Just wanted to post a quick note to say I made my first contact on 6 meters. I have had my radio for a while, tried it a few times and nothing was ever heard, so I kinda lost intrest in it. I figured since I was just running 25 watts and a coax dipole strung up in my room it would not work anyway. Well on this past thursday i flipped it on, and tuned around and was picking up some stations, I gave a call to one that was in alabama and he came back to me. I was pretty excited. it was only a few minutes later and the band was dead. The next day it was open for me again and i made a contact with a another staion in the state of ME, and got through to 2 stations in Nova Scotia. I have been monitoring it quite a bit now, hope it opens up again for me.

Take care
Jeff

The problem is with the link being too long.. Part of the URL gets cut off from the link... This is a common problem when trying to send a long URL.. Here is a handy solution for anyone wanting to paste a long URL to a message..

Go to this site and make a friendly short URL that will work:

TinyURL.com - where tiny is better! - http://tinyurl.com/

Here is a short frendly URL that will get you to the Midland Low Band 6 Meter Radio on eBay. http://tinyurl.com/g6xt

The URL is ok...but if you just click on the original posting, it is split between lines and only the front half gets sent to a browser..
try pasting it manually into the browser instead (have to do it twice to get both parts)...(OR here it is in a corrected form...use brackets to get around the problem for those posting URLs in the future; this should work):

True, there was a technician and technician plus license before the FCC simplified things by dropping novice, tech plus, and advanced licenses.

Anyway all that technical / formal stuff is just words on paper, we are all in the same hobby after all. I am no different as an extra than I was as a tech (no plus). Even with my extra class license, I still spend more time above 30 mhz, 20 meters is great and all but it is just too easy! At least 6 meters keeps you guessing, and when you hit a good opening you feel like you accomplished something.

As for the whole code thing, everything that can be said on the subject has been said.....at least 50 times. I will continue to sit on the sidelines, happy that I upgraded last year but not all grumpy that the times are changing. I look forward to the future of radio with optimism.

PS - I still think working 6 meter openings is cooler than ANY HF band :)

James "Copper Pipe j-pole" KF4OUI

I'm sorry....never seen a "no-coder" licence....maybe you mean Technician

I cannot agree with you more. I upgraded to Extra last June ('02) but started as a Tech. (5wpm required) in '59. I own two Heathkit 'Shawnees'....one for the QTH & one for the mobile, complete w/a Saturn-6 halo.
I mainly operate a Heathkit Seneca' but confess to use an RCI5054100DX for SSB. I hardly use FM on 6.

Occasionally I'll go on 75meters or 20. I prefer 15meters but never use 10.

>
> Anyway all that technical / formal stuff is just words on paper, we are all in the same hobby after all. I am no different as an extra than I was as a tech (no plus). Even with my extra class license, I still spend more time above 30 mhz, 20 meters is great and all but it is just too easy! At least 6 meters keeps you guessing, and when you hit a good opening you feel like you accomplished something.
>
> As for the whole code thing, everything that can be said on the subject has been said.....at least 50 times. I will continue to sit on the sidelines, happy that I upgraded last year but not all grumpy that the times are changing. I look forward to the future of radio with optimism.

The code requirement that has ben dropped at this time does not effect the
US.
It will take the FCC and ARRL a while to hammer this one out.

Jerry,
Don't worry about being slow. There seems to be more slow code on the bands now than ever. I passed the 20WPM exam for my extra, but still spend most of my time poking along in the former Novice bands. I find it very relaxing!

Heh....I won't give you a run for speed! Been around amateur radio for all my life...I just have a difficulty with CW. I'd still like to learn it (I'm now treating it as a foreign language...this is working for me) and USE CW. I have NO problem with CW being part of the testing regime, even tho it is difficult for me. Just something else to learn!

That said, I enjoyed the opening last night....tho it was a tad strange. It was open to the north and west at the same time....worked a couple of guys in the Nova Scotia area, as well as N. Dakota and Indiana. Hmmm....need to see how close I am to WAS. Obviously need HI and AK, but think I have the rest!

Have fun!

I use an Alinco dx70th and usually have good luck making contacts on the low (ten watt) setting. I use a Cushcraft AR6 and an MFJ tuner for the lower part of the band. I have used medium and high (50 and 100 watts) mainly on FM to get into some of the distant repeaters (the radio has a high/low switch inside the radio that limits high power to 50 watts with the switch on).

Eh...not quite. It was a tap code...google and you'll find some references.

However, I feel that CW has a place in amateur radio and will mourn the
passing of it as a requirement, if this happens. Please note that this is from a
guy that has been fighting to learn CW at a decent rate for years (lemme
see....I'm 29 and some months....been playing with radios since the
'60's.....dang....TOO MANY months!!!). Still not good at it...but it IS an aspect of the
ARS
I'd hate to see go. The ONLY problem I have with CW is that some have used it
as a banner of elitism to hold over the heads of "lower class" hams, as they
see them.

Back on topic.....I've been getting on the air in the evenings....worked N.
Dak last night at 11:15 pm EDT from Central NC EM96. Worked several Canadian
stations, too. LOVE these openings!!!

Hi All,

Listening to 6M now (1908 UTC) in Dartford, South East London UK. I can hear station in the background but there is S6-7 QRM throughout the band. The sound sounds like a steam engine puffing. It does not seem to go on and off with the fans in the PSU (a Watson W-30AM) or the TRX (an Icom 706IIG). I have heard the noise before on this band but is seems to be occasional. Does anyone have any ideas as to what it may be?
I can send a sound file if needed.

Thanks.

Ivan (G7WLL)

It does not seem to go on and off with the fans in the PSU (a Watson W-30AM) or the TRX (an Icom 706IIG). I have heard the noise before on this band but is seems to be occasional. Does anyone have any ideas as to what it may be?
I can send a sound file if needed.

Thanks.

Ivan (G7WLL)

HI, My name is Wayne, my call is KE6AJE. I reside in El Dorado Hills, Ca [CM98LQ] 45 miles east of Sacramento.
I have just reassembled some of my station after moving in to this QTH.
I operate a 6 meter beacon per the BEACONet group. Web site is: http://www.beaconet.org/
Give it a look.
I have a Ten-Tec 526, All mode 2 and 6 meters. Bricks for both bands.
I can run PSK31 SSB, and AX.25 FM on both bands.
Very antenna limited here, no visible antennas allowed, so I'll be getting them under the roof ASAP.
got to go for now.

Wow if you were only on a few days ago... 6M Fm has
been hopping up here in Canada! Monday Georgia was
coming in, Tuesday VO2AG in Labradour City, North
Labradour was BOOMING in here real strong, Wednesday
was Arkansas. Tonight I have not heard anything yet.

Oh the equiptment? A former GE MLS L040 business band
radio that was cobverted to 6M. It puts out a
consertive 45 Bird watts. I say consertative because
there is 2@ 60W finals in the PA section. The antenna
is a center fed extended double zep cut for 28.4 for
Field Day.

I listened for awhile last night on 50.125 and 52.525 with no luck as well in the DFW area. Unfortunatly my ic-505 will only tune to 52.520 or 52.530 in FM mode but I had my ft-8900 going on 52.525 with nothing heard. In usb I was hearing all kinds of stuff the other night. I hope to have a dedicated 6m vertical up soon as well as a small gain horizontal. I am stuck with a 1/4 wave whip on my truck for now or use a vertical not designed for 6m with marginal results.

btw...I am new to 6m and only heard my first band openings the other night.

3073. Re: Re: [6 Meter Sked] 1st post

Yahoo group: 6meter (2000 — 2003)
Date: 2003-07-11 15:42:03 UTC
From: Doug Huchteman
Topic: 3069 Message: 3073

I run a RCI5054DX for SSB and a FT-8900 for FM. Monitor 52.525 all the time I'm in the shack. FM openings have been pretty regular (daily) in the OKC area lately. I run a Comet GP15 for the FM and a Par A50 for SSB BUT before I got the Par I used the Comet for both modes with good results. The Par (being horizontal) really comes into play talking local (statewide) and once the E's come in the vertical didn't seem to be a problem or marginal. I have logged quite a few mobile stations working with 1/4 wave vertical whips when the band was wide open. BTW both my antennas are only 20 / 22 feet off the deck, just clear the top of my house and the radio only puts out 25 watts PEP. With all that said, my 3 element YAGI is assembled and I'm just waiting for UPS to deliver the rotor.

Returning to FM on 6m. A buddy of mine has worked a half a dozen stations from his house with an ICOM T90 5 watt HT and a Comet GP15 at 20 feet.

John, there may be a way to listen to 52.525 on the 505..
try the RIT (Or I think there was a mod to set 5 kHz steps..)
I'll check my archives for any mod on the 505 to allow you to get 52.525 on it (that is a nice allmode rig..almost bought one myself once)

Also, don't forget the DFW 53.35 rptr (WA5YST) -1MHz offset..
PL is 123.0 but if the ID doesn't say PL at the end or at the end of the hangtime, its in COS mode.

Just worked Mark, KE7NS on .125 while he was MOBILE in UT running 100watts (not bad for 25watts into a omni circular-polarized antenna at 30ft from EL29-Houston :) LOTS of QSB though.....hearing some static crashes as well..

Just heard Mark work someone else with a 9 call?? I think...so the band is trying to open again...not hearing any beacons in the CW band though.

Chris

I hadn't heard a peep all week long, until lunch time today. K0CIY must have been real loud here, no noise on his signal, as far as I could tell from several rooms away.

Of course, by the time we got through with lunch the band had closed. But I'm still hoping for the best ;-)

hi Ken: great link for specs on lots of radios:

http://www.qsl.net/sm7vhs/radio/index.html

the ts-60 looks like a nice 6m only, 100w multi-mode radio.
c u on 6m

3089. 6 Meter Rig for sale

Yahoo group: 6meter (2000 — 2003)
Date: 2003-07-14 07:40:15 UTC
From: ve5kc
Topic: 3089 Message: 3089

I Found this KENWOOD TS-60 6 METER XCVR on an online swap net and thought some one might be interested. http://tinyurl.com/gubf (the long link to the listing was shortened with Tiny URL)

I don't know the seller or the rig.. Just passing along the info..

73. . . Ken - VE5KC

3090. [Fwd: [TampaBayTradersNet] Alinco DX-70 SSB/CW/FM/AM xcvr FS]

Yahoo group: 6meter (2000 — 2003)
Date: 2003-07-15 00:07:46 UTC
From: Dennis Kaylor
Topic: 3090 Message: 3090

Hey guys
here is a radio for sale that some of you maybe interested in
please reply to the poster not to me i am just forwarding this to the
group in case it could be useful

-------- Original Message --------
Subject: [TampaBayTradersNet] Alinco DX-70 SSB/CW/FM/AM xcvr FS
Date: Mon, 14 Jul 2003 19:48:52 -0400
From: "Ken Simpson, W8EK" <w8ek@...>
Reply-To: TampaBayTradersNet@yahoogroups.com
To: TampaBayTraders Yahoo <TampaBayTradersNet@yahoogroups.com>,
CarolinaHamSwap yahoo com <CarolinaHamSwap@yahoogroups.com>,
AmatuerRadioSwapFest <amatuerradioswapfest@yahoogroups.com>

For Sale:

Alinco DX-70, 160 thru 6 meter transceiver

The DX-70 covers 160 thru 6 meters, including the WARC bands,
and also has a general coverage receiver. Modes include SSB,
CW, FM, and AM. The narrow SSB filter is in it. Of course it
has memories, scan, dual VFOs, etc. It is a small unit, ideal for
mobile or use in a motor home, but its performance is fine for
a base station as well. A 13 V DC power supply at about 20
amps is needed in that situation.

This particular unit works 100% as best I can tell, and looks
close
to the same. It is in its original box, and includes all of the
things
that it came with originally -- hand microphone, power cord,
manual, etc.

$495 plus shipping from Florida.

Thanks.

73,

Ken, W8EK

Ken Simpson

3091. More radio stuff for sale

Yahoo group: 6meter (2000 — 2003)
Date: 2003-07-15 04:39:14 UTC
From: James Carlin
Topic: 3091 Message: 3091

In the spirit of the latest barrage of cool stuff for sale, I thought I would pass this one along. Note this rig is NOT 6 meter, but it is still a fantastic deal.

Radio Shack is closing out their 10 meter all mode rig. I believe max power is 25 watts. Check the shacks around your town, if you can find one they are selling for $50 brand new! Not a bad price at all for those who want to be ready for at least one HF band when/if the FCC drops the CW test requirement. This rig is not just a glorified CB radio, it is actually a quite decent radio. I think Alinco made it for RS but I could be wrong.

Yea, go to the store nearest to your home and check out the closeout area. You might find one, and if not the store employee should (in theory) be able to use the store computer to tell you where to try next. HINT - have the minimum wage flunkey call the other store first unless you have a cool convertible you like driving.

DONT trust the online catalog! It does not show closeouts or clearance items...and I just did a search for Routers...it failed to show the $29.99 low cost model from Link Sys (under a different name though) that the local RS store has on their shelf...with RS part number so it IS a RS item...but the catalog doesnt show it....so much for their web catalog..I miss the old printed one.

the radio shack 10 meter radio is stock number 19-1110 - current price $39.97.
call your local store and just ask for the radio by SKU (stock) number. Stores are glad to sell them as they are discontinued stock and they have to eat them on their books as a loss if they cant sell them. decent radio - only downside is the tuning knob has detents in it every few degrees - hard to scan the band easily with the knob. also good as an IF for a vhf/uhf transverter for portable use.
there are a lot around yet - 15 or more in the Suffolk county, NY stores for example. The local store (using the help of the minimum-wage grunt) can look on their computer and tell you where they all are in their region (metro area, county, etc).
jay k2ovs - retired engineering dept head, now part-time minimum wage grunt......hi hi

Ask your local RatShak'er (you have questions? So do we!) to check for the part number, which is 190-1110. If you ask for the HTX-10, you'll get a blank stare (well, you may get one anyway....).

I bought one for my brother as a present after his dedicated 10M rig died. The RatShak rig works fine for what it is. Also, if you have a 6m. TenTec transverter, it works as a decent IF for the 10M output version.

Andrew

James,
You are very lucky if you can still find one. This sale has been going on for about a month, maybe longer, and has already been mentioned on many Internet groups. The radios are almost all snatched up, with many people buying two or three with the intention of reselling them when the sunspots pick up!

I found a couple in my area....called a company owned store and they found one or two locally....Called one and had it put on hold for me...its 37.99 according to their computers!
If I find anymore and if anyone is interested, I'll pick them up and sell them for same price as I pay for them (plus shipping if any)

3106. 10 meter

Yahoo group: 6meter (2000 — 2003)
Date: 2003-07-15 22:23:15 UTC
From: Lesedan
Topic: 3106 Message: 3106

Found 5 radios in the Allentown/Bethlehem region of Pa. Store people think they are cb's but they are 10 meter tranceivers.

[Non-text portions of this message have been removed]

3107. Re: [6 Meter Sked] 10 meter

Yahoo group: 6meter (2000 — 2003)

From: James Carlin
Topic: 3107 Message: 3107

I took my own advice today and bought one of the RS 10 meter rigs. I only had to go on a two store mission. Tomorrow I will check out some more stores in South Dade County for more of these radios.

PS if you find one like mine (no box no manual - display unit with microphone) you can DL a manual at radioshack.com

Good luck to all!!

>
> In the spirit of the latest barrage of cool stuff for sale, I thought I would pass this one along. Note this rig is NOT 6 meter, but it is still a fantastic deal.
>
> Radio Shack is closing out their 10 meter all mode rig. I believe max power is 25 watts. Check the shacks around your town, if you can find one they are selling for $50 brand new! Not a bad price at all for those who want to be ready for at least one HF band when/if the FCC drops the CW test requirement. This rig is not just a glorified CB radio, it is actually a quite decent radio. I think Alinco made it for RS but I could be wrong.

3109. Re: RE: [6 Meter Sked] More radio stuff for sale

Yahoo group: 6meter (2000 — 2003)
Date: 2003-07-16 00:55:51 UTC
From: Gregg Martell
Topic: 3092 Message: 3109

Checked my local store and none in the region. Glad I had the part number, otherwise I would have been like the guy in line in front of me. He was looking for a crystal for his scanner and the girl at the store called (after calling her manager at home to see what to do) that "magic" number. Since the guy didn't have an RS brand scanner, she was told that they couldn't search for crystals in their database. If the local manager had been in the store, he could have found the part number for the guy because he's somewhat techy.

I'd be interested in one, if you find another. I'm on the east coast so they're would be some shipping.

3110. Yaesu FL-2100B 6m mod

Yahoo group: 6meter (2000 — 2003)
Date: 2003-07-16 01:21:59 UTC
From: david howard
Topic: 3054 Message: 3110

i was just wondering if anybody on the group here has a fl2100b mod for 6m? i ran across one @ http://www.6mt.com/fl2100b.jpg

looks like adding a few turns to 2 coils, adding 1 capacitor and deleting another......cant believe it could be that easy to modify.......although 10m and 6m are very closely related.

here is the pic of the schematic

Good luck with that one. The shared HF/6 meter mods do not work well. You are lucky to get 1/2 power output. The tuning is so hairy you better not sneeze or the amp will come out of tune. Been there done that! 73 Louie King Conversions

There a bunch of these selling on eBay, for only a slight premium.

http://search.ebay.com/search/search.dll?MfcISAPICommand=GetResult&query=htx
-10&cgiurl=http%3A%2F%2Fcgi.ebay.com%2Fws%2F&ht=1&from=R10&currdisp=2&itemti
medisp=1&st=2&SortProperty=MetaEndSort&BasicSearch=

I'm trying Chris Boone's trick of adding the <Link> to a long link, so if it doesn't work, just go out to ebay and search on "HTX-10".

P.S. I found an HTX-10 in Milwaukee, and a search of the nearby RS's said that there were more available.

3120. Mirage A1015 FET

Yahoo group: 6meter (2000 — 2003)
Date: 2003-07-17 00:07:25 UTC
From: kbeckmann@wi.rr.com
Topic: 3120 Message: 3120

Does anyone know what the number is of the FET in the pre-amp of the Mirage A-1015 6M amp?

This is the Mirage built 6M 150W amp, not the current MFJ built A-1015-G amp.

I ended up with one, that the FET is missing.....

Hard to say....look in the ARRL Repeater directory OR your local coordinating group's list (if they publish one) for rptrs within your area that are popular...put them in...they likely may be on the more popular channels..
I usually find that with the 1 MHz splits, the lower channels are most used (53.01 thru 53.35 or so)....you will find 01 thru probably 53.11 the most used...and the rest scattered from 13 through 35....but there ARE rptrs on the higher channels...
I have a Midland Syntech II in my Blazer...110watts, 320 channel synthesized commercial rig...luckily I was able to put EVERY -1 MHz AND -1.7 MHz split in it (I could care less about the 500 kHz splits as only 3-4 states use it right now...and its the wrong plan for 6 technically anyway!)...and I am always surprised by which freq is active during band openings..Once driving around Dallas, I heard a VE rptr come in on 53.17 IIRC..
later some rptrs from the East coast on 53.81 and 53.6x were being heard down here! SOOOO you never know what channel to listen on...heck put ALL of them in..

start at 53.01 and go up to 53.99 (20 kHz steps) though some of the 53.5x channels are not rptrs under the 1 MHz split (BUT ARE under the -1.7MHz split which most of the NW US under MACC is coordinating now)...I have a T81 and put 53.01 on Memory 01,
53.03 on Memory 03 and so forth. The evens are left for other stuff! :)

ALSO put the most popular BEACONS in the 50.05-50.08 range in memory...you'll hear them before the FM band opens.

I heard two or three strong band openings on my VX5R last year with a
17-inch tri-band antenna (but didn't talk to anyone!)

Hello all. There's a band opening right now, so I figured I'd fire up the TNC. I'm on 50.620FM running a packet beacon. It'll be mostly unattended as I have some other things to do, but please give it a listen if you have a TNC and send me a message. A packet is sent out once per minute, so please tune to the freq and wait at least 1 minute before giving up. I an running an FT-100D at 50 watts with an MFJ "double zep" antenna vertically polarized at 20 feet. =-=-=-=-=-=-=-=-=-=-=-=-=-=-=- 73! de Andy KC2SSB (ex: KF4KHC/HL9HCT) Beachwood, NJ USA! Topic: 3142 Message: 3142

hey ron
welcome to 6 meters
the interfernce problems are pretty much gone thanks to cable TV and
75ohm coax on the TVs
as for an antenna i would suggest getting the biggest one you can afford
unless you dont want to compete on the band and only want to play with
it once and awhile i would suggest a 5 ele yagi about 40 foot or so in
the air
if that isnt practical then either M2(www.M2inc.com) or
ParElectronics(www.par-electronics.com)
both carry a horizontal polarized omni directional loop type antenna
what ever you do just get on the air and make some noise
good luck

Interference from you transmitting on 6M can be a problem. I get into the TV, and FM broadcast stations when I'm on 6, sometimes. Cable TV has really helped with this, as I don't interfere with it much, but not everyone has cable.

The good news is that when the band is open, you can work DX with only a few watts rather than the full 100 you have. I've talked around the US on 10 watts, which is less prone to interference.

As for antennas, it depends on your use.

For local repeaters you'll need to be vertically polarized, and may want to be omni directional. I'm using an MFJ tri-band (6M, 2M, 1.25CM) vertical up 60' which works adequately for repeater use, and DX.

I also have a fixed horizontal dipole in the attic, which can actually out-perform the vertical in some situations.

A Halo is simply a 1/4 wave dipole, which has been curved to form a circle, and radiates omni-directionally with horizontal polarization. There are quite a few designs on the web, plus there is one made semi-commercially. When I get some time, I plan on making one myself, and putting it up on the tower, as the design is quite simple

A 6M yagi (3, 4, 5... element) can increase your DX contacts, if you have a place to install it.

It seems when 6M DX is open, it really doesn't matter all that much what you use for an antenna. I put a 6M SSB rig in the car in June, and have 20 confirmed states, and 100+ grid squares using 60 watts and a 1/4 wave whip on the roof of the car.

Ron,
do you have a TV2 in your area? thats usually the worse you can have
that cause interfence both ways (we get into TVs and TV2s put out hi
level noise on 6!)

Othen than normal RFI (where RF on any freq would be rectified say in
your stereo output or similar)....not much else on 6 (2nd harmonic does
fall in the FM band so you may have some issues there...but usually not)
I have been on 6 since the early 70s....CATV helped in a lot of cases
(except where the local TV 4 was on CATV 2!!! doh! :) and have had
plenty of fun on the band and little problems with RF...
Putting your antenna as high and as far away from a TV2 or 3 antenna
will keep the problems down...also you may want to lower power from 100%
to keep the overload down..I currently run 25watts and work pretty well!

A Halo antenna is the correct name and is called exactly like it
looks..... a 1/2wave dipole bent into a circle with the ends coming
close (3-5 inches)...but a halo is not a true omni and the bandwidth is
very tight on it...best to go with something like the PAR antenna
(www.parelectronics.com) or cross dipoles fed 90degress out of phase
(turnstile)....of course for DXing a yagi or some other directional gain
antenna is best...but for overall use, the PAR or turnstile is omni and
horizontal so you get best overall local coverage...when the band opens
almost anything works (like my NMO-220(!) antenna once did on a 6mtr
band opening!)

Hope you join us on the magic band...its great...combo of VHF and HF...
you never know when it will surprise you!

Topic: 3146 Message: 3148

In any mode, feeding quads at the bottom center gives H plane..on the side center of the wire or side diamond point is V plane radiation; the diamond shape is the better mechanically especially if ICEing is possible....Switchable? Yes, it is feasible. but practical? Depends...the old PDL quad on CB was just such an animal..you can do it with relays at the antenna but they have to be weatherproofed..they would switch in and out the coax feed and also connect or open the element itself...its possible to make a circular pol quad but you DO lose 3db talking to either linear pol...

Tri band quad could be a problem given the harmonic relationship between 6&2 and 2&440...its possible...but not easy...
The 6mtr director could end up acting like a 2mtr reflector!!! and the same goes for a 2mtr director acting on UHF!

Topic: 3149 Message: 3149

When you're in the "Split" mode, whichever VFO your not listening to will be your transmit VFO. That means if you are listening to VFO A, VFO B will be transmit. If you are listening to VFO B, the VFO A will be transmit. The actual transmit frequency will be displayed when you hit the mike key.

To put it in the split mode, press the split key in the upper right corner. Split will appear in the upper left corner of the display.

A quick way to setup for repeater split, is to put the radio into VFO A, and set your receive frequency, press the split key to enable split, and then press and hold the split key, and dial in the offset. For like 53.01, with a 52.01 receive, you would put VFO A on 53.01, press split, then hold split and set it for -1.000.

As for PL tone, you need to set the tone frequency with the switches on the bottom, and the enable the radio to transmit a tone. To do this, press function, then T, and a little T will appear next to the FM on the display.

I seem to remember someone playing around with quads in the 70's on 10 meters, where they had some stubs at the feedpoints, to switch between horizontal and vertical polarization. I'll look for it.

There was an antenna called a Moonraker, that used a quad as a reflector, and the driven element was a yagi. That way you could have both vertical and horizontal elements on the same boom, plus they shared the same reflector. The directors were also yagi's, but I suppose they could be quads too.

Also look up the antenna called a gizmatchi (unsure of spelling), which was a triangular shaped antenna for 11 meters. It was supposed to be horizontal and vertically polarized.

As the other folks have said, Welcome. I in my area have Ch.3 local and use it via an outside antenna to let me know when 6 meters opens up. Buddy when it's covered up with junk, then I know 6 is ROCKING! as for antennas everyone has an opinion on the best and most of the Companies that make them and give out specs. on them but too some are over rated so if in doubt, come to one of the 6 meter reflectors and ask and you shell receive. A good loop antenna is the kb6kq at www.kb6kq.com//products. check them out. As far as getting out though I would go for the Beam type antenna. I have the M2 6m7 and the 2 meter 2m5wl.

Hello!
My name is Steve, K4SGM, from St. Petersburg, FL. I am a new ham, finally fulfilling a dream of over 50 years. I have been a SWL since I was about 8 years old, building radios, experimenting with antenna's, collecting QSL cards, etc. This ham license is going to open up a whole new world to me, as I am physically disabled, and pretty much housebound. I am a member of Handi-Hams, and also use the Echo Link System and E-QSO to communicate. I joined a local club, the Metropolitan Repeater Assoc. at the Bay Pines VA Hospital.
I am going to be looking to all of you experienced hams for a lot of technical help and advice. I hope to start out with a 2 meter/ 70 cm station, adding 6 meters by the end of the year. Any and all help will be GREATLY appreciated.
73, Steve.....K4SGM.....EchoLink node # 119304......grid # EL87pt........

<< I am going to be looking to all of you experienced hams for a lot of technical help and advice. I hope to start out with a 2 meter/ 70 cm station, adding 6 meters by the end of the year. Any and all help will be GREATLY appreciated. >>

Steve...welcome to the hobby and the 6M group! Please do post your questions here... some of us have more experience, some have less, but this seems to be a reasonable and friendly group. I, too had been around amateur radio for many years (35+ years) before getting my ticket (small things of making a living and supporting a widowed mother took precedence) but have enjoyed it since earning it. Even if it is not a 6M specific question, I'm sure most here will enjoy posting answers and help back to you.

As for your starting off....are you looking at any particular mode/band to start? You mention 2M/70 cm....many good basic FM rigs can be suggested. I've got an old Alinco (DR570...tough as nails) as well as a Yaesu. Most of the rigs from Kenwood/Yaesu/Icom/Alinco are all pretty much the same for basic operation...there are some models to avoid (see eham.net) and others which are better than others for specialty applications (Kenwood and APRS comes to mind). Do you have any type of rig yet?

Also, are there any features which your condition requires? Our club modified a rig for a local ham who had limited strength and movement....we installed a mike/PTT system with a remote head to make it easier to get to the controls, etc. It is always a pleasure to chat with him...& we're happy that we were able to make it easier for him to get on the air.

Post some questions here and I'm sure we'll be able to give you some good answers.

Cheers!

Id recommend the ICOM 706MkllG

COvers all bands, all modes, ther are a TON in use
(for good reason too) and are reasonably priced. Since
there are so many out there, there is a LOT of advice
available... But remember, save some money for a good
atnenna system If they cat hear you, the best radio
in the world is a waste...

Steve

i would suggest either the Icom 706 or the yaesu FT100D either is a
wonderful radio that gives you HF/6/2/70cm all modes
also if you want a bigger radio i would suggest the icom 746pro or the
yaesu FT 847 or the kenwood TS 2000
good luck

Boy is that a loaded question.
If you are going to work on your general you may as well look at something like an Ft100D or a 706mkIIG or any of the nice big base rigs.
There are plenty of used kenwood, icom, and yaesu all/multi-mode rigs out there.
I got an IC-505 which is a portable like the Ft--817. I can run it inthe house or out hiking around on battery power.

It depends on what floats your boat.
What are you wanting to do with it ? Figure out what fits your needs and get it.

I would suggest an Icom 746 used (great radio and can be found for a bargain!) or if you want something new then go with the ICOM 746 Pro. Both will give you 6 meter and 2 meter all mode.....and when you upgrade you're on the road to HF!

But let me remind you ANY radio will work well the key is the antenna! Put up the best antenna you possibly can! It will made a $300 radio sound like a $3000.00 radio.

73 and welcome to the hobby!

I have a FT100d,plus have the FT736R, Bought it new in 93 but the FT100D is a great little radio if you Like Yaesu(I do) You can run it from 100 watts to down to nothing if you ever want to operate Transceivers for other bands, this is agood one for it! I paid around $1200.00 for it and now it is around $800.00 but keep looking around and check with local Hams, see if they will let you look at their eqpt. and Gear and go from there!

Hmmm....played with several of the PC based modes....still can't get the thought out of my head that it is not amateur radio. This is not a flame...just my singular opinion. Interesting method of talking to folks around the world....but so is VoIP. Think I'd still like for my radio to have an antenna. ((grin))

If you're just interested in trying out 6M and don't want to drop more than $100-$150, look for a cheap MFJ 9406. 10W out CW/SSB on 50.00 to 50.300, analogue dial (negative for most folks) but cheap and fun to play with, esp. portable. If you have the $$, do look at the new Yaesu 857, the 817 (QRP....not really a starter rig, IMHO), several of the older rigs (Yaesu 625, IIRC....12/10/6 M?? built like a tank), the Icom 551 and 505 series, etc. Of course, the excellent Icom 706 MkIIG and the Yaesu FT100D have been mentioned. If you plan to upgrade, the last two are very good starters. Don't forget the Alinco DX70TH, saw one for $400 shipped on the newsgroups today. However, it is HF/6M only. Think Icom dropped the ball with the 703, tho.

From: Michael W. Elliott
Topic: 3155 Message: 3166

Great advice from all and when I started asking questions on getting started I listened well to the guys who have been around. It paid off.

I made my first 6 meter contacts on July 21 and it was great.

I decided on the Yaesu FT-847 as another rig I added to the shack. I bbught it used but it looks like it just came out the box the first time. Came with the FC-20 tuner and an added cw filter.

I have a IC-706Mark IIg but wanted another full service rig with something extra like the satellite capability. I have used it for one day and like anything else there are some pro and cons about it.

On advice from a few wise 6 meter hams I decided on the M2 6m7 7 elements on a 26 foot boom.

Working off my current yagi and wire antenna I have been able to work into Canada, iLLINOIS AND COLORADO. To some not a big deal but for me an accomplishment.

Lots of experience with this group and helping hands.

If you don't ask you won't know.

de
KQ0B

BTW
It all depends on your pockets or should I say wallet. I learned in my younger days that it sometimes cheaper to buy at a higher level rather than trading up and losing money with multi rigs. All depends on your finances.

3168. Re: [6 Meter Sked] Echolink (sort of OT)

Yahoo group: 6meter (2000 — 2003)
Date: 2003-07-22 21:03:38 UTC
From: Keith Beckmann
Topic: 3168 Message: 3168

I'm not trying to flame anyone, or start an argument here, but simply discuss this further. I value everyone's opinion, and respect their own opinion

Echolink is more than 2 guys talking to each other over the computer.

I have an Echolink node attached to a 6M repeater. It's common for me to link that repeater to another repeater using Echolink. That means that these 2 repeaters are linked to each other via Echolink, and you can talk to anyone on either repeater.

Does that fit the definition of Amateur radio?

Echolink is made up of nodes called User, Links, Repeaters and Conferences. Any one of those nodes can connect itself to one or more other nodes.

- Users are Amateurs using their computer to connect to Echolink. There is no radio involved to communicate.

- Links are Amateurs that have hooked a simplex radio to their computer, and offered to for use on Echolink. Links can accept incoming or outgoing traffic.

- Repeaters are Amateurs that have hooked their repeaters to a computer (Sometimes through a link) and offered it to Echolink. Repeaters can accept incoming or outgoing traffic.

- Conferences are just a place for multiple node to connect.

Hey Keith, what's the node number? I didn't know any 6 meter repeaters were on echo link, I'd love to listen to it.
My only complaint on echo link (and it has nothing to do with it being ham radio vs not being ham radio) is when SOME hams link into a repeater and tie it up when they are both on the computer. I've seen it happen more than once, and one guy got snotty when asked if they could connect direct and free up our repeater. Both these guys are from out of state, I have no idea why they tie up an RF repeater with their QSO. Guess they don't know how to connect to each other without going thru a repeater.

My node # is 81678, and I'm on 53.03 (-1.0) in Milwaukee.

I'm normally on my 444.875 repeater, but it's down due to a lightning hit,
which took out the xmit power supply.

There are other 6M nodes, try 19024 KB4REC.

I think the point he was trying to get across was that everything has it's place and an amber alert has nothing to do with 6 meters.

You might be suprised Paul. If you have a local node linked to a repeater try accessing by pressing 00 on your DTMF pad and you will get a random link. It can be fun.It can also be frustrating if you get several links in a row that no one will answer when you call CQ. It is not for everyone. I enjoy playing on there sometimes. My .02 worth!

Dale,
Thanks for the info, and I see your point. But my reply was prompted when a beginner asked what type of multi-mode rig he should buy, and someone responded that he should go to Echolink instead. I took that to mean that the beginner was advised to forget the rig, get on the computer. That was what I meant by boring! As hams, let's not replace RF with ISPs!
I have heard several Echolink contacts on a nearby repeater and found them very interesting..didn't mean to trash the whole concept.

As the former Chief Engineer of the station that was the birthplace of the Amber Alert Plan in Texas (our General Manager, JD Freeman, came up with the idea after the abduction/murder of the girl it is named after...and presented it to the Dallas ARM-Association of Radio Managers-the next lunch day and the rest is history), and was always involved in any Amber Alert that went out on my stations (and damn proud of it), I have to say this:

There are MANY more outlets for Amber Alerts than a small number of amateurs on a 6mtr reflector...besides, how many on here are from Shreveport, LA???....the Amber Alert was put out on local broadcast (Radio AND TV) as well as other means of communicating with the PUBLIC...I seriously doubt this list really needed it (anyone reading this list while mobile?? I doubt it) unless it became a regional /national alert.....and then those of us involved in a professional broadcast way about the Amber system worry that it will get overused, abused and eventually ignored....it could happen..here in Houston, there have been TWO Ambers issued and then cancelled within 2 hours of the issuance..that never happened in the DFW area..because it was not politically driven as the National or State plans have become ...but done right by the broadcasters and police.....

I am probably just as much public service minded as the next person but there is a PLACE for everything...this list is not the place for local Amber Alerts (shall I start posting Houston Amber's everytime?? DANG, I missed two already! ;)

I hope you get the point correctly.

Chris
WB5ITT
Former CE KDMX Mix102.9 Dallas

I am now off MY soapbox.....lets keep the list on topic PLEASE!

Echolink used as Voip connection between rptrs is fine...using it to
LEGALLY control a remotely controlled station as defined in Part 97 is
fine...BUT Echolink has too few security checks and that bothers me...
In fact, under Part 97, stations with a connection like Echo link are
supposed to be secure from unauthorized access...but I bet I could break
into one and spoof any callsign I wanted to on an Echolink node in 30
mins tops...and then (IF I wanted to) spew out obscenities, etc (hey
wait...thats 75 at night or 20 on a pileup!!).....

IRLP is the only system that maintains a Radio to Radio VoIP
connection..and is safe AND secure (it does not allow non radio PCs to
connects to nodes)...Echolink COULD be if it had better security than
using a ham's callsign info as a check(whooppee! I can get that off QRZ
OR the FCC public files in 30 seconds!)...

NOW for a newcomer, there are plenty of used rigs out there to buy..
I would strongly suggest not rushing out and buying the 1st one..
Get an allmode rig..one that has allmode squelch or could be modified..
do you want to run mobile? then look at the smaller radios for your use..
if not, even a HF +6 rig would be great like the TS680 or 690s..
or similar...

But make sure it has SSB, AM, FM and CW...there is too much to miss on 6
if you dont (6 is opposite 2...you buy an all mode rig on 6 and discover
FM after working SSB....on 2, you buy it for the FM...and then
discover the fun of weak signal!)

< Snip>

Yup, you could break into it quite easily, knowing what you know, but realize Echolink logs its usage, and if I figure out your not who you say you are (The big IF), I can track you down quite easily. Echolink logs the IP address and call sign of every user. It looks like this (modified to protect identifies):

2003-07-22 16:52:15 Connect KB7QQQ Tony Appleton 13123 12.203.211.176
2003-07-22 16:57:25 Disconnect KB7QQQ Manual

I even go one step further, and use a program called "All Day Audio Recorder".

http://www.davee.com/scanrec/index.html

This is a neat little program with an audio squelch, that records all the audio to a computer file. It compresses the time by eliminating gaps. I can typically monitor an entire days repeater usage in a short time.

Could someone knowledgeable pull the wool over my eyes? Of course, but then he'd only be talking to a bunch of hams anyways.....

How secure is a 2M radio? Without a license, I could buy one, and find my local repeater and create havoc. I could even access the local IRPL node!

I like Echolinks ease of use, and EZ setup. I will agree with you that Echolink has looser security, but that just puts the responsibility of its use into the control operators hands.

Oops....forgot to mention that it was not a failure....unless you want to call the sudden stop at ground level from around 40' up on a tower a failure! Broke the case on a 3 wk old DJ190, case was replaced UNDER WARRENTY. Heck, I even told them what happened!

Not bad at all.

Andrew

I have 2 Alinco ht's and a mobile rig. The mobile I bought new last year and it had a bad ptt switch on the mic. I contacted Alinco and shipped them the bad mic and I had a brand new one that week. The two ht's have been great...an older DJ-190 and a newer DJ-G5TH. They both saw some rough use in the woods near Nacodoches this last Feburary and came out virtually unscathed. I have several friends that have them as well. I haven't heard any real justifiable reasons for staying away from that brand.

Hope that helps some.....

I have made the "tiny 2" for 2 meters that should scale up to 6m without any problems. It was a direct connect 2 element yagi that worked fairly well. Granted it did not have the gain or F/B ratio of a long boom yagi it was definately directional in nature and simple.

And?? SO what if you track it?? DO you think that is any different than say leaving your door open and letting ANYONE come in and key up radio on the air? READ the rules...
the word here is SECURE! NOT Logging....you have NOT met part 97 if you leave the station unsecure to open use...who CARES what the log says?? If I leave my doors open at the house and someone walks in and uses my radio, you think the FCC will care about my video of the guy doing it?? HELL NO!!! This is a poor argument at best...like closing the barn door AFTER the horses are out!!
I cannot stop someone from buying a radio and keying it..
THATS NOT in my control...I CAN stop someone from keying MY STATION...and thats the issue and you WILL get a pink slip from the FCC on that....if you cannot grasp the idea of security and properly securing an amateur station, I suggest you take it off line until you read and understand Part 97 (which you are supposed to have legally agreed to WHEN you sign the license!)

Yup, you could break into it quite easily, knowing what you know, but realize Echolink logs its usage, and if I figure out your not who you say you are (The big IF), I can track you down quite easily. Echolink logs the
IP address and call sign of every user. It looks like this (modified to protect identifies):

2003-07-22 16:52:15 Connect KB7QQQ Tony Appleton 13123 12.203.211.176
2003-07-22 16:57:25 Disconnect KB7QQQ Manual

I even go one step further, and use a program called "All Day Audio Recorder".

How secure is a 2M radio? Without a license, I could buy one, and find my local repeater and create havoc. I could even access the local IRPL node!

I like Echolinks ease of use, and EZ setup. I will agree with you that Echolink has looser security, but that just puts the responsibility of its use into the control operators hands.

here is my opinion on 6 metors and 222-225 on echolink. go for it get those 6 metors and especially 1.25 repaters on echolink. the fcc took part of 1.25 years ago because it was underutilized. so if you get a 1.25 on echolink then everyone talking on it through echolink makes the fcc think the 1.25 or 6 meters are really being used. too bad no one has yet to my knowledge put the 902-928 or the 1200's repeaters on echolink. my only concern on echolink is this. i am a tech no code. what happens if a lets say 10 metor repater links into echolink? am i over my area by talking to the operator of that station? a few of the german stations list 29.68 etc as their station. another german had things on his info about being on shortwave. don

Sorry to correct you but your facts are wrong!! 220-222 was NOT underutilized...the FCC OET (Office of Engineering Technology) LIED in their arguments because they used the ARRL Repeater Directory...and guess what?? THERE WERE NO RPTRS LISTED IN 220-222...because that was NOT rptr area..but links (which werent listed), packet (same thing), and SSB/CW (DUH!).....No, the FCC used wrong info to take 220-222....NOT because it was underused.....that is a false statement..

Also you DO bring up a point....talking on a PC into an echolink on 10mtrs (or even 6 or anyother band) is REMOTE control of a station and YOUR license priviledges count...From a radio link on say 220 onto a VoIP system then out on a 10mtr FM rptr, that IS legal...because the VoIP is like a wire connection...BUT YOU
must start on a RF freq legal to your license...otherwise YOU and the trustee of the remote station are in violation of Part97. Its all in Part 97..if people take the time to read AND understand it...it all depends on WHERE you are in the system..

I havent seen any hurricane reports on this list...and really wouldnt care to....there are avenues for everyone to get such reports...this list is supposed to be ham radio AND 6mtr related...not Amber, hurricanes, tornados, etc! Find a local list to post Amber alerts on...NOT a national mail list like this one...now I dont post HOUSTON Ambers on here...I have seen them on local list BUT....
1) who reads a mail list while mobile?
2) I listen to AM/FM radio...if an amber goes off, it will be there 1st!
3) IF I really want to be that involved, I (and anyone else) can get the email sent straight to me from the issuing police group..either my home address, my work address OR even cell phones...

posting them here does nothing but use bandwidth and send unneeded messages...

Period.

Im through with this thread...back to SIX METERS! :)

just so you know the amber alert is a nation wide
system

America?s Missing: Broadcast Emergency Response

i thought this was a site for amateur radio operators
it is so sad when you are worried about a amber alert
post taking up your bandwith maby everyone needs a
refresher

THE AMATEUR'S CODE
THE RADIO AMATUER IS:
CONSIDERATE------ Never knowingly operates in such a
way as to lesson the pleasure of others.
LOYAL----------------- Offers loyalty,encouragement
and support to other amatuers , loyal clubs and the
American Radio Relay League through which amatuer
radio in the United States is represented nationally
and internationally.
PROGRESSIVE----- With knowledge abreast of science, a
well built and efficient station , above reproach.
FRIENDLY------------- Slow and patient operating when
requested; friendly advise & council to the beginner;
kindly assistance,cooperation and concideration for
the interest of others. These are the hall marks of
the amatuer spirit.
BALANCED----------- Radio is an avocation, never
interfering with the duties owed to family, job,school
or community.
PATRIOTIC------------- Station and skill always ready
to serve country and community.
Segal 1928

About The Amateurs Code
The Amateur radio operators code was originally
written in 1928 by Paul M. Segal (W9EEA) , It was
then adopted by the ARRL and put in place as the basis
of or foundation of the ARRL , you will find this code
present at, or in the text of almost every text
published , concerning Amateur radio practices. The
FCC recognizes this code as the cornerstone of most
all radio procedure. Hang it on your wall , know it,
Live it. This and common sense will serve you well
when rules are questioned!!

its time we started to rember this brian kc0kfg

(&$^%^ AOL....!)

Look at making a "spyder" or hexbeam antenna. Mine weighs in at around 2 lbs
and folds up quite small (6 x 32" long fiberglas supports, the wood hub and
the wire). Has fairly good F/B ratio. Not a 5 ele yagi...but they're a bear
to pack into the woods. A quad is another possible....lots of plans on the web.

This is just a reminder.....

This is a place to discuss 6 meters, activates involving 6 meters, radios that use 6 meters, antennas that work for 6 meters, etc...
This is not a place to argue about the Amber alert system or over Echolink (almost none on 6 meters). Please lets keep arguing out of the group.
Also I will allow Amber alerts to be issued and major storm warnings on this group as it will help them to reach a larger group. As for the Storm warnings, many of us ham are also SKYWARN spotter and use 6, 2 and 440 to give and receive information.

If you have any question if something is appropriate please direct them to me.

I've an idea (based on something I saw online) for a 2el Yagi made of
RadioSchlock retractable-whip antennas. Center section'd be a couple
short lengths of 1/2" pvc pipe and some fittings to clamp to the whips.

Heh...had to change the subject line...lets keep Jamie happy, it was nice of
him to start this group, so lets support him!

I've got one of the dipoles, built it in 20 min with two RatShak 72" whips, a
chunk of nyloc (teflon) and a couple of screws to attach the coax. Drilled
two holes thru the nyloc for the whips and one in the bottom of the nyloc block
to accept the tip of a small stand I use for support (folds up quite small).

However, if you want lightweight, just make a standard wire dipole and carry
some twine to mount it between two trees. Can't get lighter than that!

I've got that covered already. :-) And for FM and *some* gain I've got
a ladderline J-pole, a fishing reel and a lead weight. :-) This whole
"backpack dx" thing is turning into an obsessio- er, a hobby all of its
own. Anyone else do the "lug a radio into the boonies" thing on a
semi-regular basis?

< Ob6m: I'm planning on heading to the NC and TN
mountains in a couple weeks and am contemplating what
to do for an antenna for 6m. I'm going to be throwing
together a quick-n-dirty take-apart dipole; would the
added gain be worth the extra complexity of making a 2
element Yagi? Keep in mind this is something that'll
be breaking down into 2' chunks so I can stick it in
my daypack and lug it up mountains :-).>

Just a comment about which antenna to use in the in
the mountains. Just now on my way home I had a QSO
with a member of our local club that has moved.I am in
Augusta,GA and he was in the NC mountains on the Blue
Ridge Parkway useing 10 watts and a quarter wave
antenna. ON 2 METERS FM! Thats a long distance record
on 2m for me. Anyhow, it looks like any antenna will
work, it is the elevation that does more for you than
anything else.Hmmmmm.... if he just got through on
2....I wonder if 6 is open??!! Gotta go check!

well i'm not debating you but what is one major subject that people talk
about when they connect on echolink etc? they say how are you what is the wheather
doing there then they tell you their tempature. almost always. when i sent
the amber alert i thought that is what hams do is emergency things and are proud
of all the emergency things around areas. i know that if i am in boise area
and a amber alert comes it is shown on highway signs, radio, tv etc. so i
thought why not share it in my groups i'm in. that man was in louisiana but without
sleep could easily have driven to texas, oklahoma etc. so it just wasn't
local. he could have got on a plane, train or bus and been in your town in hours.

OK, What is the tiny 2 and how do I build it? If it matches up well, you
can add boom and directors easily to get all the gain you want.
Ron

The tiny 2 is a simple 2 element direct connect yagi...no matching system
required.
It's url is : http://www.qsl.net/w4sat/tiny2.htm

Also, here are some other simple yagi's and quads...they are all direct
connect
http://www.qsl.net/w4sat/antlegn.htm

to convert the tiny 2 to 6m I would divide 146/52 and then multiple the
result by all the diminsions to scale it up. (2.8)

2.77' * 2.8 = 7.76' for reflector
1*2.8 = 2.8 for distance betwen reflector and director
19" * 2.8 / 12 = 4.43 ' for each half of the director
This is using the 1"tubing diminsions

Hope this helps....

73,
Jon

Hello all. The ☐Tiny 2☐ looks simple to construct. I have a few questions. Please forgive me, I am a new ham and I have never built a antenna before

1). What kind of ☐tubing☐ is recommended? I was thinking about electrical conduit

2). Would I use the same tubing for the boom?

3). If the boom is metal, is it supposed to touch the driven element (the one that is 2☐ 9¼☐)?

4). What about the other two elements on the right in the picture. Are they supposed to touch each other? The picture looks like they are held in place by U bolts and slid inside of PVC pipe. Is this correct?

I would appreciate if anyone has any info that they could share. Like I stated above this is my first antenna building project and I would like it to be successful

Thanks in advance,
Mark

I built one using 1" copper pipe and 1" cpvc tees and a boom of 1" cpvc. I had to hollow out the tee for the reflector so that the copper pipe would slide through...dremel tools rock !! The other tee is left as is and the copper pipe is held in place with a stainless steel screw with the coax either wrapped around it before tightening or the coax soldered to lugs and attached that way.

The 2 web pages have nice diagrams of the antenna. The driven element looks ok but they don't give any input as to how to mount the thing to the boom. I can play with it and get something going, but if they have something worked out it would stream line things. The links to the "tips" pages don't work. Any body built one of these things? How did you hang the driven element onto the boom?
Ron

3225. Re: [6 Meter Sked] (Echolink, getting more OT)

Yahoo group: 6meter (2000 — 2003)
Date: 2003-07-25 01:00:00 UTC
From: JJ
Topic: 3184 Message: 3225

If you use copper pipe and cpvc fitting as in a tee like the diagram shows, it all fits nicely and it takes only a single stainles steel screw to hold each element in place. PC glue can be used to hold the t's with the elements to the boom. Add a third tee in the middle of the boom so it can sit on some more 1" cpvc tubing and rotate without interfering with the elements. It can be built for horizontal or vertical orientation and made to take down easily.

73,
Jon

OK. Why not send your comments to the group?
It will not hurt my feelings, there are MANY rigs out there....
No Ham rig will match the Maxtrac for a noise blanker on FM, etc. however,
(name one that does!!!!!)
I can get the one I am selling programmed for the buyer....
One can get the Motorola and key down and not have to worry about the finals
or getting their head examined either, hee hee....

Well my Midland Syntech II on 6 will match your Maxtrac for NB
operation...(I know, its not a ham rig....but they should have sold them
as such with a lower price!) so will a NB in an ALL mode radio...true
the Japtrac FM only rigs MISS the boat with NO NB....Azden was once
quoted as saying "FM DOESNT need it" .....right!!!

**** ALERT FOLLOWS **********
Amber Alert Issued Sunday July 27
Brooke Michelle Reese and Katlin Marie Reese

The Kokomo Indiana police department issued an AMBER Alert after the two girls were abducted from their home early Sunday.

Brooke Michelle Reese 12 yrs. white female 5'2" tall 135 lbs. short blonde hair and hazel eyes. Katlin Marie Reese 11 yrs. white female 4'0" tall, 85lbs. Long brown hair in a single ponytail, and hazel eyes.

Police are looking for Kenneth Floyd Housley 5'7" 130 lbs., with short black hair balding on the top with black beard.

He was last seen driving a tan over green Jeep Wrangler 1997 with expired Indiana plate VT 4452.

Anyone with information is asked to call the Kokomo PD at 765-459-5101
or dial 911.

Message

I was thinking about how the status symbols of today is those cell phones that everyone has clipped on. I can't afford one so I'm wearing my garage door opener.

You know, I spent a fortune on deodorant before I realized that people didn't like me anyway.

I was thinking that women should put pictures of missing husbands on beer cans!

I was thinking about old age and decided that it is when you still have something on the ball but you are just too tired to bounce it.

I thought about making a movie for folks my age and call it "Pumping Rust"

I have gotten that dreaded furniture disease.... that's when your chest is falling into your drawers!

You know when people see a cat's litter box, they always say, "Oh, have you got a cat?" Just once I wanted to say, "No, it's for company!"

I thought about how mothers feed their babies with little tiny spoons and forks so I wonder what Chinese mothers use. Perhaps toothpicks?

Employment application blanks always ask who is to be notified in case of an emergency. I think you should write . . . A Good Doctor!

Why do they put pictures of criminals up in the Post Office? What are we supposed to do . . . write to these men? Why don't they just put their pictures on the postage stamps so the mailmen could look for them while they delivered the mail?

I was thinking about how people seem to read the Bible a whole lot more as they get older then it dawned on me . . . they were cramming for their finals.

3237. Antenna polarization

Yahoo group: 6meter (2000 — 2003)
Date: 2003-07-28 19:56:09 UTC
From: Jonathan Cox
Topic: 3237 Message: 3237

A quick question for all the magic band guru's. I know that when working sporadic E, polarization doesn't really matter. However, Does it matter when working F2? And also, has anyone had any good luck with a homebrew dipole on 6 meters? I would think that would be an economical alternative for a horizontally polarized antenna. I use a cushcraft AR6 vertical now, and it seems to work great for sporadic E propagation, Just wondering if there are other forms of propagation I should be considering. Thanks to all who care to reply and give me the benefit of your experience.

Best regards
Jonathan

I have built an antenna calle the Simple Six that was
in QST, and available on the ARRL website. Its a VERY
simple dipole out of a pvc T and some telescoping
aluminum tubing. I know I wont be a big gun, but I
have made contactes into Florida and Montana from
Cleveland Ohio EN91.. Nice backpack antenna.....

I built the pvc / telescoping aluminum tubing dipole from the QST article. I have worked New England from Nevada with 100w and just worked Colorado the other day with 5 watts. The dipole is at 22 feet with 50 ohm coax and no tuner.

3242. RE: [6 Meter Sked] Antenna polarization

Yahoo group: 6meter (2000 — 2003)
Date: 2003-07-29 01:25:40 UTC
From: Steve kinosh
Topic: 3237 Message: 3242

DO a search and use 6 meter antenna.. It sould bring
up a list of available articals...

3245. Re: [6 Meter Sked] Antenna polarization

Yahoo group: 6meter (2000 — 2003)
Date: 2003-07-29 12:13:46 UTC
From: Chris Boone
Topic: 3237 Message: 3245

The majority of the time you need to worry about polarization is working
LOCAL non DX stations (within a couple of hundred miles).
A dipole is horizontally polarized...you need to make it rotatable
because it has deep nulls off the ends (classic figure 8 pattern)..
OR make a crossdipole (turnstile) and not have to rotate!

From: Steve
Topic: 3246 Message: 3246

For all those that asked. GO to the ARRL website, and type in simple sixer in the search box. This will take you to the plans. Or if you have back issues of QST its in the Sept 99 pg 56.

Good luch!

Steve KB8UTA

3247. Re: [6 Meter Sked] Antenna polarization

Yahoo group: 6meter (2000 — 2003)

Try this Ron,

http://www.arrl.org/members-only/tis/info/pdf/9909056.pdf
You have to be a member of ARRL to access this file.
When you click on the link a box will pop up asking
your password and username. Enter your info and away
you go. You also need Acrobat to read it.
Good luck!

3248. Another antenna question

Yahoo group: 6meter (2000 — 2003)
Date: 2003-07-29 21:01:39 UTC
From: m_sabal
Topic: 3248 Message: 3248

I live in a townhouse with antenna restrictions. I currently have a dipole along the ceiling in my bedroom. Besides my 5W TX, I'm really not happy with the RX either. Because of that, I bought 22ft of 6# copper at Home Depot that I can trim down if needed. I'd like to make a rectangular loop or halo and put it in the attic.
#1) Is a rectangular loop or circular halo better on 6m?
#2) For a rectangular loop, what are the best dimensions / ratios for long side vs. short side?

N.B. - Primary mode of operation on 6m is SSB. Not enough FM around here to even bother with.

A square loop or circular would be best....not a rectangular...the pattern is cleaner in square or circular...BUT a full wave horiz loop will have more signal skyward than toward the horiz..(think quad element turned on side)

> #2) For a rectangular loop, what are the best dimensions / ratios for

See above :)

> N.B. - Primary mode of operation on 6m is SSB. Not enough FM around

IF you have the room, try two crossdipoles fed 90deg out of phase (turnstyle)...its OMNI, Horiz and easy to build...matching requires some 70ohm coax..but thats no problem. Need the details? let me know..

I think I've seen that one....just can't recall where.
That would be a good attic antenna for restricted areas.

Would you care to post the data on it for all to see ?

--- In 6meter@yahoogroups.com, "Lesedan" <lesedan@e...> wrote:
> I would like info on the cross dipole and phasing too.

From what I've read, each dipole is the normal size for 6 meters. You place a center mast, and put each of the 4 dipoles at 90 degree angles from each other, in a sloping format, 45 degrees off of the ground. Each is placed the same distance from the mast and the ground or roof (wheverever you are mounting them). You feed each dipole with coax (or whatever method you will use) just like normal. You'll need a 4 position antenna switch. It's kinda like a Christmas Tree of lights.

I've always thought it would be a neat project, but my 3 element works just fine and I don't really have the space to try that project. If you do it, I'd like to see pictures and comments on the performance.

Woah there partner!...NO 45 deg slope here...the dipoles are in a HORIZ mode...dipoles that slope are called Inverted Vs and are VERTICALLY polarized.

> ground. Each is placed the same distance from the mast and the
> ground or roof (wheverever you are mounting them). You feed each

> You'll need a 4 position antenna switch. It's kinda like a Christmas
> Tree of lights.

Nope...not what I was talking about....the TURNSTILE involves two normal 1/2wave dipoles.....looking down on them from the top they look like a + NOW to get the correct phasing, a 1/4wave (90degrees) in COAX phasing line (50ohm) is connected between them...(major typing, deleting and retyping follows...then submission... ;)

I WAS going to type a long post and thought a URL would be easier since the info is there and easy to read....W4RNL's web site has info on just about ANY antenna you want to look at...here is the info on the basic turnstile:
http://www.cebik.com/turns.html

and the details of one built for 10mtrs:
http://www.cebik.com/a10/ant34.html

Easy to scale to 6....just follow the directions! DO NOT adjust the antenna length for min SWR...that screws up the pattern!

The FIRST article has additional matching ideas, etc....GREAT reading!

His main amateur radio page is:
http://www.cebik.com/radio.html

There is a lot of excellent material there to browse through!

Enjoy!

For those wanting to stack two turnstiles together (as I have always advocated), here is an eye opening article by W4RNL!!!
http://www.cebik.com/tss.html

WOW!! His site always amazes me!!! even at 6 something AM...coffee! I need coffee!!! :)

Enjoy the information overload....the antenna designs on his page are great material.....BE careful in following any construction ideas to the small DETAIL....in one article he calls for PARALLELED lines of RG62 but the drawing only shows ONE coax...YES, it SHOULD be TWO there running in parallel...using one there will NOT work right...and leave some folks frustrated... ;)

You misunderstand what I was trying to say. Each dipole runs at a 45 degree angle from the ground to the center mast holding the 4 dipoles. Each dipole is NOT in an inverted V formation. It kind of looks like 4 guy wires holding a center mast, but the guy wires are actually dipoles fed in the center of each. I hope this clears up what I was trying to explain. I saw this done when I was in Korea. Our MP TOC had set up dipoles in this format for military frequencies. I am not sure what freqs they were actually using though, nor did I get to see the radios set up inside.

He didn't mention a turnstile antenna. He mentioned a "Cross Dipole" perhaps he meant the Turnstile antenna, maybe he meant this other antenna that I am talking about. When you look down on the antenna I described, it looks like a +.

Still coming across sounding like Inverted V's to me.
If the dipoles are not parallel to the ground and approximately 90
degrees to the mast they are inverted V's.

No they're not. You're picturing two dipoles, overlapped at the feedpoints like a turnstile. What he was describing was *FOUR* dipoles, laid out as slopers, facing away from each other, supported by a common mast at their "high" ends. One of the four dipoles would be selected by a coax switch, depending on in which direction you wanted the gain. It's an interesting concept, if only because wire for four dipoles and attendant feeds would be cheaper and easier to erect than a beam with a rotator. :-) "It was cheap, and Scrooge liked it." :-)

They are 4 half-wave sloppers with one END of each attached to the top of a center mast and the other end of each attached to steaks or something simlar in the ground. It looks like a mast being supported by 4 guy wires with no antenna on the top, but the "guy wires" are actually half-wave slopping dipoles. The feedline runs at a 90 degree angle ("straight down") from each wire and they all meet at the bottom of the mast. The 4 feedlines go into the shack into a 4 position antenna switch.

An inverted V is a single wire antenna that is supported in the CENTER of the antenna, where the feedline meets the wire and the ends of the wire slope down approximately 45 degrees.

If you guys don't understand it NOW, I don't know what to tell you.

Thanks for helping to explain, Bruce. I saw this done in Korea at my unit's TOC. I always thought it was interesting. I'd love to do it, but I really don't have the space. You do need a little bit of room, even at 6 meters. I wonder how well it would work at 2 meters? Hmm.. dipoles would only be a little more than 3 feet each...

I think you hit the point of diminishing returns at 2 meters, 'cause
you'd use much less wire for a 4 or 6 element beam like the "cheap yagi"
designs, and the beam wouldn't be that big or unweildy. At 6 it might
still make sense, since to put up a tower with a Yagi on it you'd still
want guys, so why not try the dipoles idea and just leave the yagi off
the tower. Wind load would certainly be lower, which down here in
Florida is a concern.

That's 9 feet 4 inches of wire going up at a 45 degree angle from 4 directions, plus the rope at each end of the dipole, plus the center mast to hold the ends of each of the 4 dipoles. Your mast would probably have to be higher than most living room ceilings. I think my ceiling is only about 8 - 8 1/2 feet or so.

I was never good at geometry. How high would the center mast be with 9'4" of wire and maybe 6 feet of rope to secure the ends (3' each end?)? How big of a circumference would the "footprint" be of this antenna? I certianly don't think it would fit in MY living room! I assembled a dualband (2m/70cm) 5 element yagi in my living room and almost couldn't get it out the door.

Woah there partner!...NO 45 deg slope here...the dipoles are in a HORIZ
mode...dipoles that slope are called Inverted Vs and are VERTICALLY
polarized.

> ground. Each is placed the same distance from the mast and the
> ground or roof (wheverever you are mounting them). You feed each
> dipole with coax (or whatever method you will use) just like normal.
> You'll need a 4 position antenna switch. It's kinda like a Christmas
> Tree of lights.

Nope...not what I was talking about....the TURNSTILE involves two normal
1/2wave dipoles.....looking down on them from the top they look like a +
NOW to get the correct phasing, a 1/4wave (90degrees) in COAX phasing
line (50ohm) is connected between them...(major typing, deleting and
retyping follows...then submission... ;)

boy you guys are getting so mixed up by a simple concept
you take one dipole pointing north/south take another dipole pointing east/west
put them so they cross one another in the middle so the two antennas form a + and then feed it the way the other guy has told you and you have a turnstile
i would suggest using aluminum tubing rather than wire you wont need the end supports and its boarder banded
the elements DO NOT droop

3274. turnstile

TURNSTILE ANTENNA

The TURNSTILE ANTENNA is one of the many types that has been developed primarily for omnidirectional vhf communications. The basic turnstile consists of two horizontal half-wave antennas mounted at right angles to each other in the same horizontal plane. When these two antennas are excited with equal currents 90 degrees out of phase, the typical figure-eight patterns of the two antennas merge to produce the nearly circular pattern shown in figure 4-39, view A. Pairs of such antennas are frequently stacked, as shown in figure 4-40. Each pair is called a BAY. In figure 4-40 two bays are used and are spaced 1/2 wavelength apart, and the corresponding elements are excited in phase. These conditions cause a part of the vertical radiation from each bay to cancel that of the other bay. This results in a decrease in energy radiated at high vertical angles and increases the energy radiated in the horizontal plane. Stacking a number of bays can alter the vertical radiation pattern, causing a substantial gain in a horizontal direction without altering the overall horizontal directivity pattern. Figure 4-39, view B, compares the circular vertical radiation pattern of a single-bay turnstile with the sharp pattern of a four-bay turnstile array. A three-dimensional radiation pattern of a four-bay turnstile antenna is shown in figure 4-39, view C.

Figure 4-39. - Turnstile antenna radiation pattern.

We've got two different classes of antenna being described here.

1. Turnstile: two horizontal dipoles crossed 90deg at their feedpoints
(the centers) and fed from the same feedline via a 1/4 length piece of
coax to get them fed 90deg out of phase. Produces a roughly
omnidirectional radiation pattern. Simple and elegant.

2. For want of a "formal" term, call it a 4-way sloper: four sloping
dipoles, laid out 90deg from each other, each fed at its center by a
separate run of feedline. The "high" ends of the four dipoles are all
supported by a common center mast. Only one of the four dipoles is
active, with selection being made by a switch between the four feedlines
and the transmitter. Produces one of four directional radiation
patterns, depending on which dipole is selected.

Each group is well aware that what they are describing is not what the
other group is describing (I hope! :-)).

(* quickly hauls his hand back out of the disposal before some other
poster can turn it back on again *)

OHHH I just reread the below...what you have is multi SLOPER dipoles..they still radiate in vertical mode..and are somewhat omni..if spaced right and fed in phase properly you can get a directional array out of that...but omni horiz? nope...cross dipoles? nope they never cross! (IE: cross in the feed center)
The array you describe is used in the US Mil because its easy to throw up and take down...but they arenot what we were discussing.

The crossed dipoles we were talking about are not sloped or slanted...and in the horiz plane, they are a turnstile; different name but same thing..but what you described is not; they are crossed inverted Vs.

I see Bruce posted this before mine will post...yes what Andy was describing is 4 SLOPING dipoles...NOW on HF this is easier to put up and tear down than a 4 element yagi (OR transport which is the MIL reason for using it)..
F-B is not that great since spacing is not correct, to get
GOOD gain and F/B, the elements should ALL be fed in proper phase...which requires a coaxial phasing or similar matching network...too much bother for the mil in the field... (think quick and easy and use a tuner!)...now the dipoles do get some directivity from the mast if its metal..but not much...

using this on 6?? waste of time...3-4 yagi would be better...
BUT AGAIN, even if its all you can put up, its VERTICAL..
we are needing HORIZ for best local operation..and thats the nice feature of the Turnstile....OMNI, HORIZ and good bandwidth..
usually better than a HALO which are usually built too small!

NOW if you want GAIN, a HALO or similar stacked is probably better...unless you build a SUPER Turnstile...which is not dipoles but a SLOT antenna (the "slot" is actually a wing).. this is also called the BATWING antenna....popular among TV broadcasters as its GAIN and WIDE bandwidth on lowband channels (needed for a 6 MHz TV channel at 54 Mhz!)....can be stacked for gain...anyone want to build one? they arent that hard...
the matching harness is the tuff part :)

Subject: Re: [6 Meter Sked] Re: cross dipole

We've got two different classes of antenna being described here.

1. Turnstile: two horizontal dipoles crossed 90deg at their feedpoints (the centers) and fed from the same feedline via a 1/4 length piece of coax to get them fed 90deg out of phase. Produces a roughly omnidirectional radiation pattern. Simple and elegant.

2. For want of a "formal" term, call it a 4-way sloper: four sloping dipoles, laid out 90deg from each other, each fed at its center by a separate run of feedline. The "high" ends of the four dipoles are all supported by a common center mast. Only one of the four dipoles is active, with selection being made by a switch between the four feedlines and the transmitter. Produces one of four directional radiation patterns, depending on which dipole is selected.

The original poster made no mention of a turnstyle. He simply asked
about a "cross dipole". What I thought of when I read "cross dipole"
is different from what others thought of (turnstyle).

Actually, only 1 dipole is active at a time since you're using an antenna switch, making it sort of directional, so phasing wouldn't be an issue.

Then its not directional! The mast is too close wavelength wise to act as a tgrue reflector...and without any other dipoles actively fed, they may act more as directors depending on their length...either way the pattern is screwy....true a sloper is supposed to radiate primarily in the direction of the top to bottom slope (in the downward direction of the wire) but the key word here is SUPPOSED to...I have yet to see a single wire antenna be directional....except for maybe an inverted L..but thats not a straight line wire! :)
But to have good directional radiation, the mast should be .2 to 1/4wave away from the wire at all lengths...that is impossible to do with the sloping...and the mast is probably not large enough compared to wavelengths involved to really matter...

Anyway, it was not what I was calling a crossed dipole...and antenna folks dont call them that either..they are a sloper design...but not crossed..

Now back to the horiz 6mtr omni antenna subject :)
I have a few other requests in email for the PDF on the quad turnstile...will send them out tonight.

Well actually it should be 70ohms because (tada!) the dipole is 70ohms not 50 ohms (how quickly we forget)...so YES, I shouldbe said 70 ohms...in other antennas like cross gamma matched dipoles (like a Cushcraft 4 pole modified for circular pol) the line is 50 ohms since thats the antenna impedance...you usually (but not always!) use the terminal Z...but in the turnstile case, with the offset lengths feedline the different dipoles, it uses a different line, RG62, which is 93 ohms! See W4RNL's web site for the details...there was also a note in a recent article on turnstiles to use dipoles which are one short and one long to introduce the reactance that cancels when added together for wider bandwidth and better circular pattern over that bandwidth...

Tnx for pointing out my goof on that....

The deference is. An inverted V is fed at the top of the V, at the top of the tower. What he is talking about is sloping dipole feed at the center of the sloping dipole, not at the top.

Simply due to budget I'm restricted to making a long wire antenna for 6 meters but have quickly found I really don't know what the heck I'm doing. I do have wire and plenty of RG/58 and RG/59 cable all I need now is some know how, my 20 year old ARRL hand book is clear as mud. who wants to point me in the right direction? Thanks in advance!

I know about horizontal VS vertical stuff already, so lets get that out of ther way now. I do not want to be the cause of 500 messages about the subject.

Anyway there is my disclaimer. Now for the good part.

If you are budget driven (we all are, just some budgets are larger than others) you have options other than a long wire. The cheapest option is a good ole dipole. The cross / turnstile dipole thread has actually been quite informative. It sounds cheap, but not as cheap as a regular dipole.

Another option is a j-pole. I built a 6 meter j-pole out of copper plumbers pipe for $20. It is direct fed and has a SWR of 1.5 or less depending on frequency, SWR is high if it rains.

The j-pole will work for FM work, and if the band opens it will also work for SSB. I have worked Argentina from Miami FL with my j-pole on 50.125 USB.

The dipole will still be cheaper and easier to install than the j-pole, but the j-pole will offer some gain over the dipole. At $20 for the j-pole and $10 or less for the dipole, your budget may allow for both! I am not really a big fan of longwires, as I have not had much luck using them. I would rather use a dipole than a longwire but that is just me.

Anyway that is my two cents worth. At any rate, happy 6 metering!

How about a coax ant? take your rg 58 and strip about 6 to 8 feet of the black cover off. slide your hand down the braid from the end back to where you made the cut on the casing. a "bulge" will form where the braid comes out of the outer casing. when that bulge gets big, you can fold it back on itself and run it in side out back down the cable. now you have 6 to 8 feet of center conductor and dielectric exposed and 5 to 7 feet of shield exposed folded back on it self. you just made a dipole. the coax runs inside the braided shield feeding it at the center. put a swr meter on it and trim away until you get a flat match.

hang it from a tree or any thing that is non reactive and you have a vert/onmi 1/4 wave "big stick" coax antenna. run it under the eaves of the house and you have a horz dipole. get real ambitious, strip a lot of outer casing and make a 3/4 wave for some gain. use rg 8 for wider band with.

Ok, lets see if I get all the questions answered.
Location: small city lot
Workable antenna space: very sparce, basically peak of the house is only place, about 15 - 20' max height
Other options: wife is still pissed over cost of radio, need to build super cheap antenna so I can at least please her with a voice on my "expensive voiceless radio". J-pole and mast would be ideal however to many $$ at the moment. Don't care about FM, working AM and SSB.

At the moment I threw up a wire dipole with RG/59 feed line. SWR over 3 at 50.125, less than 1.5 at 50.500. Am toying with idea of "the mighty-wide dipole" at http://www.qsl.net/g3pto/6m_dipole.html , thoughts?

Like I said, if you want to go with a j-pole you can buy all materials for right around $20. This is assuming you already have a propane blowtorch and pipe cutter.

You might also try giving the dipole another chance. It sounds to me like you cut the first one a little too short. Add more wire to it (or ditch the evidence and make a new dipole). Do not worry about making the dipole too long, you can always trim to tune.

The mighty wide looks interesting, but really if you are not concerned with FM there is no need to have an antenna that covers the whole band. Just cut your dipole for the bottom of the band and you should be ok. When the band is open your SSB action will be concentrated from 50.115 - 50.200, with 50.125 being the most likely place to hear someone. Cut for 50.125 and you should cover at least 100khz on either side, which will do fine.

And remember, you will continue to have a voiceless radio until you hit an opening. Unless of course you beg others in your area to give you a sympathy contact :)

Oh yea, one more little thing about the boradband dipole design I forgot to mention before. It calls for 300 ohm twin lead ribbon cable, which has VERY THIN wires. I have a 300 ohm twin lead 2 meter antenna for use with my HT, and it works fine, but the HT only puts out 5 watts.

I do not know what kind of radio you have, but if the radio puts out more than 10 watts I would think about a wire dipole. And even if 10 watts is your maximum output, it might be too much for a twin lead antenna. Be very careful, it would totally suck to damage your expensive new radio using an antenna that can not handle the radios power.

A wire dipole made out of 14 guage wire on the other hand will easily handle 100 watts.

Ideas:

Scrap the RG59...use minimum RG8X...I use 9913, some use LMR400. Consider a Halo, some designs are wider (mine covers from 50.100 to 50.600 with an acceptable SWR). Can you mount externally? I've got a PAR omni on the chimney....quite small (wife didn't notice it for around a month!) and works well. SWR is good from 50.00-50.500. The Halo is under the roof and is dedicated to the AM boatanchor rig.

Are you allowed external antenni? If so, a plumber's delight or something like the Cushcraft AS3-50 (3 ele beam) on a TV rotator might be good. Homebrewing a 2 or 3 ele beam is easy and cheap, using either a gamma match or the hairpin, which MFJ uses on their little beam. A quad is another alternative, tho physically more noticeable (most folks think a 6M beam is a fancy TV antenna...the quad comes across more as "one of those CB antennas.") Good gain, tho and easy to homebuild.
